

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Everything currently performed by registered and qualified Optoms and DOs.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Everything as above.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

All dispensing of spectacles.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Far more disadvantages than advantages. More rechecks etc, missed pathology etc etc.

This is just an excuse to save the multiples money, like they already do employing Dispensing 'assistants'.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Sight testing is best carried out by trained, qualified and registered optometrists. Otherwise, what is the point of the university degree?

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

All sale and supply of optical appliances to everybody should be restricted to qualified and registered optoms and DOs.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Better service to customers, and less problems.

Again, multiples save money by employing 'dispensing assistants' so they will not want further restriction.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Only trained, qualified and registered dispensing opticians should be able to sell optical appliances.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

Regular sight tests are essential for ocular health.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Missed pathology is main disadvantage.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No disadvantages.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Fit and suitability of sportswear optical appliances is most obvious disadvantage.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No disadvantages.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Optical appliances should only be dispensed by qualified and registered optical professionals.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

There is no regulation if the seller is not registered with the GOC. This should be changed.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Do not allow online spectacle sales of any sort.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

As it is today and no authority or management on registrants as the time we need to do a test, what we have to sell, conversion...
Whatever their education, those people must be registered with the GOC to be accountable for their behavior.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Dispensing optician: Anything about dispensing
Optometrist and contact lens fitter: anything about contact lenses and solutions
Optometrists: eye-test and pathologies.
Only optometrists should have the right to deal with ocular diseases, even dry eye or blepharitis.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:

Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

There are already too many qualifications. We should have only 3 qualifications:

Dispensing optician

Contact lens fitter

Optometrist (which should include IP, glaucoma level 1 and 2 as retina level 1 and 2).

We need to update the qualification by adding one year of theory and 2 years of practice, one in hospital.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

As optometrists, we fight to get the right to screen for diseases.

An optical prescription is not only refraction, it is also binocular vision and a pathology assessment. An asthenopia may be linked to a binocular problem, and a change in the prescription may be linked to pathology. Sometimes we need to use a diagnostic drug as cycloplegic to get the right refraction.

If a dispensing optician gets the right to do refraction, who will check the eye? if it is under the supervision of an optometrist who will be responsible? Too many risks that a patient will not be able to be seen by the optometrist. The excuse will be: Do not worry, you will check the eye on collection. You understand the patient is in the rush.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

The patient will not be able to make the difference between an optometrist (ophthalmic optician) from a dispensing optician.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I cannot see any disadvantage. The waiting list to get a sight test is only a few days.
Allowing dispensing opticians to refract will push the optometrists' income down. As a result, optometrists will be asked to refract quicker...

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

My patients are old, most of them are over 60's. I estimate the percentage to be 20%

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

If you separate both when the health care will be done? Later, when? On collection? Most patients do not book an appointment to collect their spectacles or contact lenses... They can buy their equipments elsewhere, or may not need any equipment.
As a result, most of the patients will get their spectacles or glasses without their eyes checked...

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Contact lenses increase the risk of keratitis, allergies, dry eyes etc. Patient need to understand those risks and who to contact in case of a problem.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

No it increases the safety

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

For the safety of the patient, someone has to check the conformity of the product.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

This is the necessary step. This is what is done with medications. Anyone in the chain of medical prescription has his/her responsibility, the physician, the chemist, the nurse...

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Bad vision, the patient may drive with the wrong prescription.
Eye trauma. Who will pay for that? The NHS?

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Even if contact lenses have no power, they may still hurt the eyes. Who will pay for the treatment? NHS?

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Keratitis, patients may not be able to get the right treatment. They may choose to treat themselves with chloramphenicol...

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Most non-registrant are not educated in optics. They are not able to make recommendations if there are any questions about the patient's eyes. Sales will be more important.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

We should copy what is done in medicine.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Spectacles must be adjusted to give the best vision and comfort to the patient. If you buy online, who does the adjustment?

Who determines the position of the optic centre in the frame? Online sales should be restricted to +/- 2.00dp

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

It should be forbidden to sell over +/- 2.00, bifocal and varifocal online, except if the dispensing and collection can be done somewhere with a dispensing optician.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

As for the refraction, only an optometrist or physician should have the right to evaluate the health of the eyes, including dry eyes and blepharitis.

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Any new optometrists should be trained as IP. This should be include in the curriculum as in the other countries, USA, Canada, Australia...We should not wait 2 years...

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction. Refraction and understanding the needs both optical, environmental and psychological take time to develop as a skill.

We will see and increase in retests and missed pathology

Fundus examinations. Should only be carried out by qualified personnel

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction

Fundus examination

IP

Glaucoma

Low Vision

Yag

Intravitreal injection

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Have done to many retests for DO refractions

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

This would just devalue the sight test lead to cheaper running costs for multiples and endanger the public

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The public are only just recognising the value of the profession blurring lines about who does what will confuse them

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

I also work secondary care. 60% of referrals are unnecessary

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Fine as it is. Leave it alone it works well

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Under 16

Low vision

Ready refers over +3.00

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

I can see accidental sale if wrong power or lens type occur g. We are already seeing a tidal wave of infections post covid due to people not having regular check ups then the nhs is left picking up the bill because the online seller didn't check their health or overuse of contact lenses

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It would harm public please I urge you not to do this o ku yesterday I saw a patient for a glaucoma check up in hospital who asked me to check her contact lenses as she had not had a check up fir 6 years.

I had another last week who asked me to insert his lenses. When I asked he said he always gets a friend to insert them. Another lenstore customer. This would endanger the public further. The thought of me going into a pharmacy and pointing at a medicine because I wanted to use it could be harmful. Equally letting the public do this with contact lenses will harm them. How do we explain to a latent who's child was killed by a contact lens wearer because they bought them without proper checks

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

We will see I fectio s spike as we did in the past and as we do every halloween

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It's confusing fir the public the GOC need to clarify thus to make it easier for the public and professional to have a clear position

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

N/a

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

It protects the public however I do think I'm the under 60 sight tests intervals could be switched to every 3 years rather than 2

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I think it will lead to harm for the public we already see people using ready readers for years with the wrong rx

I often see patient come fir the Far East with cheap glasses complaining they cannot see but then I am left to rectify the issue and educate the px

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None it's safe and well understood. But you could extend it to 3 years eight test interval fir under 60s thus will allow more space fir specialist clinics

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It could cause possible long term damage if they wear the wrong rx

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It's fine is work it's not broke leave it alone

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I have worked in telemedicine post pandemic

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Online sight tests don't work. I have looked at this several times. No matter what they claim it gives a refraction but doesn't assess other factors

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Evaluate each system carefully with large scale clinical trial it needs careful regulation

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

N/a

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I think extended scope of practice for registered professionals will need looking at

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction. Eye Examination. Fitting and supply of contact lenses. Dispensing of glasses to children. Dispensing of safety glasses.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction. Eye examination, including interpretation of photographs, data etc.
Fitting and supply of contact lenses.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Online supply of contact lenses. Anyone can log onto a site and buy any contact lens they wish at the moment. There is no regulation at all. I am seeing people wearing lenses that they have simply guessed the power. People buying multifocal lenses without any fitting being done as they want to try them.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

There seems to be a gradual take over of Optometry by people who are frustrated doctors, and want to practice medicine without the appropriate medical school training. The skills of refraction are felt by these people to be below their interest. Look at the list of lectures at any large Optometry conference. hardly a mention of refraction.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

The idea of a random unannounced visit from the GOC is a sound policy.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Refraction is what Optometrists do. It what we do best. It distinguishes us from anyone else.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Large multiples will use lower paid dispensing opticians, to refract, they will not increase wages. They will then push for use of refractometer readings to be used to dispense glasses.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

If a practice is not registered for a MECS type system, then one is obliged to refract a patient who has come in to have an ingrowing lash removed in order to claim an NHS fee. As an example.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It keeps refraction as the speciality of Optometrists. Those who want to go along the medical intervention road can do so, but they will need an Optometrist to do the refraction.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The number of Optometrists and CLO's who fit CL's seems to be adequate.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Fitting of contact lenses can be time consuming, the time is rarely charged for by the large multiples, who hope to make money from online orders.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Children. Adults with learning difficulties.

The supply of low vision aids to those registered as having a visual loss is open to interpretation. Is a camera based magnifier an optical aid?

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Vulnerable people would have a course of legal redress if they are taken advantage of. Much easier to detect and prosecute with a professional regulatory system.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

There is currently no effective regulation of online contact lens sales at all.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

There does not appear to be any enforceable restriction to online sales of contact lenses. It is a free for all. The contact lens manufactures seem to be happy with this arrangement.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

It should do, but it does not.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The current law is ignored. GOC have done nothing about this at all.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

A physical eye examination ,face to face. Using appropriate equipment including over refraction.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

A contact lens is a risk to the eye of the wearer, irrespective of whether it is zero power or +6.50. Tinted/coloured contact lenses are often harbours of infection due to poor hygiene.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

see above

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

see above

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There appears to be no currently enforced regulation.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Are people to simply guess their optical prescription? Use an auto refractor as the large multiples want to move to?

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

It is not 100% ideal, but seems a reasonable compromise.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

People digging out old Rx and getting it made up to discover that is actually for their father, who has the same name (seen that done). Having an old pair of glasses focimetered to get a prescription, then realising they belong to someone else, (seen that as well).

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I am now tired of answering the same question over and over, please use a different form of wording.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Children wearing ill fitting goggles which can damage soft tissue.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protection of children is usually considered a good thing in a civilised society.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Safety glasses need to continue to be regulated.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Online contact lens sales are unregulated. The supply of multifocal glasses by online suppliers is a real problem for an optometrist to sort out if the patient is not happy with the vision or appearance of the glasses.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Online supply of glasses should be restricted to single vision ,low powers only.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

[redacted] recently removed the His and Hers signs above the frame displays as they were worried about offending people who were unsure of their own sex.

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

- testing of sight - health check and refraction
- fitting contact lenses
- sale and supply of optical appliances

7 What activities do you think must be restricted to our registrants?

Please provide details.:

- testing of sight - health check and refraction
- fitting contact lenses
- sale and supply of optical appliances

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Glaucoma qualifications/ med ret cert

A changing landscape of care provided by optometrists - these need approval as will become more widespread as optometrists provide a greater range of care to the public

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Separating refraction and eye health check could be catastrophic.

In 20 years of practice I have diagnosed people with eye conditions when they did not know they had a problem almost on a daily basis. The effect on public health would be lots of people not being diagnosed with eye conditions until significant and irreversible sight loss has occurred - this would clearly not be in line with your primary directive of maintaining patient and public safety. It would also cause a greater burden on the health service.

We currently have (I believe) one of the most effective systems in the world for screening & diagnosing eye conditions - this is significantly linked to refraction being linked to eye health checks. Our system of linking the two encourages people in to a eye health screening service - it is notoriously difficult to get patients to attend health screening services - why separate refraction and health checks - it will cause the health checks to be an afterthought where it's very hard to get patients to attend - massive detrimental effect of public eye health!

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Please see prev answer.

The only advantage is lining the pockets of [redacted] directors. Please don't allow pressure from businesses who's main aim is to make money (not look after patients) influence your regulation of our industry.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantage would be that we could continue providing high levels of eye care to the public, and by continuing to link refraction and health checks we carry on encouraging the public into a valuable eye health screening service to detect early signs of eye disease.

The disadvantage would be none, we have a system which works well, no equality, diversity and inclusion issues as NHS eye exams are free to all. The only disadvantage would be (and this should NOT be one of your considerations!!) that this link can get in the way of some businesses money making ideas.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

In an average week I refer 8-10 patients

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Anecdotal (and common sense) data says that if those 8-10 patients were not referred by me their eye conditions would get worse and cause sight loss. They would also more than likely end up presenting either to their GP or the eye hospital with their conditions in a much worse state and require greater time and effort from the NHS to care for them, or have irreversible sight loss.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Contact lenses must be fitted with by a qualified person to ensure they can ensure the health of a patients eye is preserved.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If the regulations were relaxed you would have many people with poorly fitting contact lenses and the medical problems this can cause, and without all the correct advise and management patients are far more likely to get sight threatening diseases - a definite risk to public health.

Studies have shown that the single greatest contributing risk factor for catching microbial keratitis is buying contact lenses from the internet as these patients do not bother to attend regular aftercare appointments.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

I am not aware of the current regulations (if adhered to) causing any problems

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

none

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

The only problem I have with current regulations is that the way the [redacted] interpreted it is that we can only supply lenses which will last up until the patient needs to have their aftercare - this is too strict, and more leeway should be given for the clinician to exercise a little clinical judgement (as we used to be able to).

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

All the other regulations and necessary to protect the public, although I would like to see the GOC try to enforce the rules around supply of contact lenses [redacted] supplying to UK patients.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage - obviously more mistakes if a verification stage is removed. This results in more patients being given the incorrect lenses.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Aftercare should check acuity, prescription, fit, eye health and how the patient wears them (to make sure they wear them safely and avoid unnecessary risks to their eye health)

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Patients who buy zero powered contact lenses in non-clinical settings are often not educated in how to get them in and out and how to care for their eyes and the lenses - this results in more eye infections and visits to eye hospital casualty as they can't get their lenses out

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Patients who buy zero powered contact lenses in none clinical settings are often not educated in how to get them in and out and how to care for their eyes and the lenses - this results in more eye infections and visits to eye hospital casualty as they can't get their lenses out

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Patients who buy zero powered contact lenses in none clinical settings are often not educated in how to get them in and out and how to care for their eyes and the lenses - this results in more eye infections and visits to eye hospital casualty as they can't get their lenses out

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

no disadvantage - the regulations are sensible to protect public health

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

NA

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

NA

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

poorly made (insufficient or poor quality measurements) can cause adverse ocular problems

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

2 years is a reasonable interval to check your prescription hasn't changed

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

disadvantage - more people walking around with an old prescription. this causes less clear vision / eye strain and nobody will have checked if they are legal to drive.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The only disadvantage is occasional minor inconvenience to the patient - small price to pay

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

Not being able to send out contact lenses for under 16s from the supplier is a pain

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

U16s could receive their contact lenses through the post from the supplier

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

not too much of a problem

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

NA

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

NA

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The glaucoma care schemes/ MECS/ CUES schemes are new and relevant to the GOC.

Some mention of how ophthalmologists and optoms can work together to reduce the burden on the NHS & the regulations around this would be useful

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Remote care for eyes does not work well. I have personal experience (and have spoken to many colleagues with the same experience) remote care did not work well in the pandemic - it involves too many assumptions and guesses - never good for clinical care.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

NA - at this stage no technology which would be of benefit to the patient, only tech which could save a business money - this should not be the a driver for the GOC especially when it compromises patient care and public health

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

remote care should only be used in pandemics

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

NA

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

NA

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

NA

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I think you are right to look to the future and try to make sure regulations don't inhibit progression of technology and the use of it (I am a big fan of new tech) but remote consultations have no place in eye care unless there is a pandemic - it's just a shameful way to try to save money at the expenses of patient care and public health

Further information

56 Can we publish your response?

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Testing of Sight

Eye health assessment

Contact Lens fitting / prescribing / aftercare (plano or prescription)

Dispensing optical appliances to Children (U16)

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Testing of Sight

Eye health assessment

Contact Lens fitting / prescribing / aftercare (plano or prescription)

Dispensing optical appliances to Children (U16)

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Prescribing of plano prisms. Non registrants appear to be advertising this service to both adults AND CHILDREN. I wonder if they think they can get away with this because they are plano prisms? To my mind as an Optometrist a plano prism is most definitely an optical appliance, and one that used incorrectly can cause harm to a child's visual development.

Myopia management should in my view be under the supervision of an Optometrist not just a Dispensing Optician, as best practice dictates that the patient requires binocular vision assessment as well as refraction and probably cycloplegic refraction too.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Behavioural Optometry

In countries such as the USA & Canada, where this is a more established eye care practice, I believe registration is required for this enhanced eye care service. In the UK it seems that aside from voluntary registration with an organisation such as BABO anyone can claim a speciality without necessarily having the training, accreditation or expertise to back this up. As with dispensing plano prisms this exposes patients to risk of harm.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

I think unless the GOC can regulate online ordering / supply coming into the UK all you do is over burden the UK optical practices.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

There is the risk of adding financial burden to UK optometry practices when the bigger picture is that the risk to patients comes from online optical appliance sales.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

This depends on what additional powers the GOC would require, is seeking and the effect these would have. Adding further burden to UK registered businesses where the issue is not being able to regulate overseas or online businesses would be counter productive.

14 Is there an alternative model of business regulation that we should consider?

Yes, another model (please specify)

Please give your reasons and provide any evidence to support these.:

My feeling on this is that adding another layer of regulation will adversely impact, both in terms of financial costs and time pressures, the smaller optical practices and have minimal if any impact on the larger online retailers.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

No. Refraction is so much more than just checking the prescription for glasses (or contact lenses). I have worked with, and employed Dispensing Opticians for over 22 years, almost all of whom have been brilliant at what they do. Unless they are trained in binocular vision, ophthalmoscopy, ocular side effects of systemic medications, detecting signs of systemic and ocular diseases the risk to the public is that members of the public receive a lower standard of care than they currently receive from an Optometrist.

With the knowledge that the GOC has, and the mandate to uphold standards for the benefit of both the public and practitioners I cannot see how delivering a lower standard of care benefits anyone in the medium to long term.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

With the knowledge that the GOC has, and the mandate to uphold standards for the benefit of both the public and practitioners I cannot see how delivering a lower standard of care benefits anyone in the medium to long term.

Separating the refraction from the sight test is not in the public's interests. If a patient has mildly reduced vision, is it amblyopia, an early macula disease, cataract, corneal opacity/dystrophy, keratoconus or just the incorrect refraction? I don't believe it is fair to the patient or a Dispensing Optician to expect them to be able to know all of this.

As far as I can tell, it is now easier than ever before for a Dispensing Optician to re-train / upskill to an Optometrist. Surely this is a far better solution than potentially reducing the care and quality the patient receives.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

I think the current legislation protects the patient's best interests, even if the patient may feel regulation is unnecessary, they are often not fully aware of the bigger picture and the benefits medium to long term from having a registered OO or CLO provide their contact lens care.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protection of the public.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Patients who lack capacity.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patient's who lack capacity will benefit from the care provided by having their optical appliances dispensed by a suitable qualified and experienced registrant.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

As far as I can tell, anyone who wants to can buy contact lenses without needing a prescription can and does freely. I think the boat has sailed on this one. The online companies who want to circumvent any regulations on the sale or supply of contact lenses already do so.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

No

Please give your reasons and provide any evidence to support these.:

As far as I can tell, anyone who wants to can buy contact lenses without needing a prescription can and does freely. I think the boat has sailed on this one. The online companies who want to circumvent any regulations on the sale or supply of contact lenses already do so.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

As far as I can tell, anyone who wants to can buy contact lenses without needing a prescription can and does freely. I think the boat has sailed on this one. The online companies who want to circumvent any regulations on the sale or supply of contact lenses already do so.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As far as I can tell, anyone who wants to can buy contact lenses without needing a prescription can and does freely. I think the boat has sailed on this one. The online companies who want to circumvent any regulations on the sale or supply of contact lenses already do so.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Probably broadly in line with the requirements of testing of sight.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

As far as I can tell, anyone who wants to can buy contact lenses without needing a prescription can and does freely. I think the boat has sailed on this one. The online companies who want to circumvent any regulations on the sale or supply of contact lenses already do so.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

As far as I can tell, anyone who wants to can buy contact lenses without needing a prescription can and does freely. I think the boat has sailed on this one. The online companies who want to circumvent any regulations on the sale or supply of contact lenses already do so.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Patients who buy novelty / zero powered contacts in my experience tend to be the least likely to seek professional advice or support unless they experience a significant adverse event.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protecting the eye health of the public.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The market is free enough already. Patients have a wealth of choice, the recent drop in price of high street optical appliances surely give patients access to the lowest prices they have ever had.

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

The number of ocular conditions such as glaucoma detected would surely increase over the years, not immediately, but over a decade or two the eye health of the general public would suffer.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

This is in a way a silent but significant health benefit to patients / the public at large, that they won't realise they need until it's too late if this is withdrawn.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

In my clinics the highest level of preventable sight loss is amongst adult patients who buy glasses without a prescription (and therefore eye care as well) and only seek professional advice by the time they have a significant loss of vision. Glaucoma is a common finding in this group, along with cataracts reducing vision below the legal standard for driving and also macula denegation once the second eye is affected.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Providing patients with an eye health check every two years, which they need but often don't appreciate the benefit of until they've had it.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Sports have a higher risk of injury to patients, which can be life changing, particularly for young people. The legislation protects young people from the risk of harm.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The potential cost savings need to be balanced against the risk of injury from incorrect optical appliances. The data likely to support this will only become available once a number of young people suffer sight loss from incorrect optical appliance provision.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

The fact that you can buy a product online from an unregulated market and have this delivered to the UK is no doubt beyond the reasonable level of regulation the GOC can enforce.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

No. Most of us, if given the chance to save time or money will do. The risk is that most people don't understand the medium to long term risks when it comes to their eye health and vision. The best I can do is to try and educate the few who ask me to enable them to make an informed decision on this.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Testing sight, contact lens fitting/aftercare, dispensing of glasses to restricted groups

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Testing sight, contact lens fitting/aftercare, dispensing of glasses to restricted groups

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Refraction is a major element of the sight test. In conjunction with the rest of the sight test, it can indicate the overall health of the eye. It is imperative that the optometrist is conducting this part of the test and can then interpret the results relative to the rest of the test,

Indeed many patients only come in if they want new glasses. There have been numerous instances over the years where I have picked up pathology for such patients. Separating the refraction from the health check, risks devaluing the rest of the sight test in the eyes of the patients.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Refraction is a major element of the sight test. In conjunction with the rest of the sight test, it can indicate the overall health of the eye. It is imperative that the optometrist is conducting this part of the test and can then interpret the results relative to the rest of the test,

Indeed many patients only come in if they want new glasses. There have been numerous instances over the years where I have picked up pathology for such patients. Separating the refraction from the health check, risks devaluing the rest of the sight test in the eyes of the patients.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Better for the patient to have everything done together with one person responsible.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

-

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

-

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Ensuring proper aftercare of CL Patients

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Deal with any CL-related problems for Px

Provide ocular healthcare for CL Px

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

-

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

-

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

-

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

-

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

-

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

-

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

-

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

-

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

-

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted
]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Testing sight

Fitting contact lenses of any kind

Dispensing spectacles to children and partially sighted patients

Basic refraction tests

Giving advice about topics that they're are not sufficiently trained or knowledgeable

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Sight testing

Children's dispensing

Dispensing to impaired patients of all types, physical and mental

Fitting ALL contact lenses

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not Answered

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Dementia,
Mental illness
Learning difficulties

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients being cared for by a regulated person

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

No

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage of missed pathology

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Contact lens optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Supply of contact lenses, that should include Plano CL too.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Supply of clear and colour contact lenses

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

On line supply of CL, so many px are coming to us with issues after wearing on-line CL

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above
and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Refraction for glasses by CLO, as CLO already doing refraction/Over refraction.

Minor eye condition and glaucoma refinement referrals. ABDO started this service Mecs and GRR and so many CLO showed interest in it and passed all the necessary exams and achieved necessary skills and qualifications, however can't practice in a high street optician as a qualified CUES practitioner, because GOC doesn't allow us to. Unfortunately by not practicing in a day to day practice these skills are fading away.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

CLO doing refraction and involved in CUES services will take unnecessary pressure off on HES and optometrist colleagues.

More DO will be interested in CLO qualifications as they will be able to see progression after being a CLO will be able to work in hospital environment.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Any activity that can impact on a persons sight. Thus dispensing of glasses, particularly progressive lenses. If these are bought online without the correct measurements and fitting, they can lead to issues, some more that others.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Invasive surgery

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

There needs to be postgraduate qualifications that permit advanced techniques. These qualifications need to be agreed upon and recognised by other professional bodies such as the Royal College of Ophthalmologists as well as GPs to carry out advanced techniques such as intravitreal injections, SLT, Iridotomies etc in a community setting. However, at the present time, all these activities are restricted to those working in the hospital setting alone and the qualifications set out by the College of Optometrists such as in glaucoma and medical retina, are not fully understood by the average ophthalmologist in local HES. So many of these activities are restricted but there needs to be a method to allow optoms to carry them out with the right qualifications.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

I say no but what I mean is that postgraduate qualifications such as in glaucoma (levels 1,2 and 3) should be accepted by ophthalmologists so that local agreements can then be arrived at in which optometrists can carry out techniques such as SLT in the community.

In my experience of having spoken to ophthalmologists about the College of Optometrists qualifications, they have not even heard of them and do not have confidence in optometrists with these qualifications to get involved in extended roles in the community (ie outside of HES).

Therefore any qualification, whether they are registered by the GOC or not, must have the full backing of ophthalmologists so that optometrists can use these qualifications to carry out advanced techniques in the community (outside of HES) with a clear syetem of payments otherwise there is no benefit in these qualifications, regardless of who registers them.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

Refraction and the health of the eyes is one simple entity. It cannot be broken into two separate activities. How we see is determined by our refractive status as well as the health of our eyes. Many times people can see very well but only a full sight test will uncover problems such as diabetic retinopathy and these would be missed if we separate the two functions of refraction and eye health check.

However, a refraction carried out as a delegated function by an appropriately qualified dispenser and a eye health examination carried out by an optometrist including a review of the refraction results would be fine.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality,

diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

see above. Biggest disadvantage of separating the sight test into two separate functions is the missing of pathology in an otherwise normal looking eye.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

the opticians act states

"such additional examinations as appear to the doctor or optician to be clinically necessary"

This part of the act is seriously problematic as it means optometrists need to carry out an exhaustive list of test all within the same sight test fee.

This needs to be amended so that only refraction and an intraocular exam is required in the sight test. All additional tests such as fields tests, IOP measurements, repeat tests, dilation, cycloplegic examinations, gonioscopy, OCT, fundus imaging, keratometer measurements etc, all need to be classed as additional examinations and paid for separately.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

By keeping the statement

"such additional examinations as appear to the doctor or optician to be clinically necessary"

as it is as part of the definition of what a sight test is then more and more practices will stop providing NHS exams as it is simply not possible to provide all these additional examinations for free.

By taking this statement out and requiring optometrists to refer a patient that needs these additional examinations to themselves or another optometrist for further investigations for an additional fee, would be in the best interests of the patients. At the present time, optometrists will either simply not do these additional examinations but simply refer them to HES, which will increase pressure on HES, or they will just not engage in NHS work. In either case, this would be a bad result for the patient.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

A qualified person must be the only one to fit contact lenses as the case presently

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not Answered

Please explain which group(s), give your reasons and provide any evidence to support these.:

Yes. We have so many patients turn up for a CUES appointment with red and painful eyes having bought their contact lenses from the internet. These patients cannot be seen under the CUES scheme and cannot go to the practice they bought them from as this was online. So all these patients are currently going to A&E clogging up the system and getting free treatment. This should be the responsibility of the internet suppliers. A charge should be built into the purchase price of these online lenses that covers their after care should they end up with a red eye which they most frequently will do. This charge should be paid as a tax to and directed to the HES to cover the cost of treating these patients who buy their contact lenses online.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

as explained above

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

If it became easier to buy online then there would be a surge in red eyes and patients with corneal ulcers visiting A&E. Who will cover the cost of this additional treatment for these people? Need an online tax for this

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Less people ending up in casualty

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Without an aftercare element, internet providers are not being held accountable for the sale of their lenses. They can sell them cheap as they have no responsibility for the care their patients. There is no way to enforce a system of aftercare provision for online retailers. The simplest solution is an online tax for the activity that must be paid for with each purchase.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

These are still devices that can cause serious harm to the eyes and should be regulated in the same way.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

see above.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Without enforceable legislation, patients will continue to block up A&E. Only solution as already mentioned is an online tax specifically for the after care or paid to optometrists to manage these online patients via a system such as CUES

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

More people ending up in casualty with red eyes

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

not sure

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

not sure

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

a prescription needs to be dispensed. This requires an understanding of the nature of the prescription and is not the same as simply "selling" glasses. If the prescription is not dispensed with the most appropriate lenses then this could lead to injury or harm to the patient

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

The health of a patients eyes could have changed in that time

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This would necessitate a regular eye health check just like a dental or other general health check which would ultimately benefit the patient.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Current system ensures patient safety

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

not sure

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

not sure

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

not sure

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

I think the sale of progressive lenses should not be allowed online as these require considerable skill and accuracy of measurements to dispense

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Without the correct measurements it could lead to increased falls and accidents

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I have read a research paper in which telemedicine carried out by optometrists over the lockdown period was examined and it the results were not positive.

The research paper was:

A prospective evaluation of the clinical safety and effectiveness of a COVID-19 Urgent Eyecare Service across five areas in England

Conclusion was:

The present study found that a virtual assessment service providing optometrist tele-consultations was not effective at resolving patients' acute-onset eye problems. The range and number of pathologies missed by tele-consultations suggests that the service model in the present study was detrimental to patient safety.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

More guidance is needed in managing various conditions remotely

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

The above research paper outlines these gaps

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

The above research paper outlines these.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

progressive lenses and contact lens after care need more clearer rules

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

As mentioned before, progressive lenses should not be permitted for online sales.

There should be an online tax added to each sale of contact lens which can be used to pay for the inevitable contact lens related complications either by HES or by optometrists via a scheme such as CUES

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Clear rules that allow appropriately qualified optometrists to carry out advanced techniques within the community ie outside HES eg

1. Intravitreal injections
2. SLT
3. Iridotomies
4. Iridoplasty
5. Removal of chalazion

etc.

At the present time, the many ophthalmologists do not understand what the College of Optometrists postgraduate qualifications are and what competencies they develop. Ophthalmologists do not have confidence in these qualifications, even though some have been agreed upon by the Royal

College of Ophthalmologists.

Therefore legislation that clearly defines who can carry out these procedures within the community and what the appropriate qualifications should be would greatly help to increase confidence in optometrists trained with these skills.

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I think there should be a doctor of optometry qualification that is similar to that of dentists. This title should be given to those optometrists who have achieved a number of postgraduate qualifications offered by the College of Optometrists, which incidentally requires extensive hospital experience, and this should be agreed upon by the Royal College of Ophthalmologists so that ophthalmologists have confidence in this.

At the present time there are 4 areas that have been agreed upon:

1. Glaucoma
2. Medical Retina
3. Cataracts
4. Acute and Emergency Eye Care

Each of these 4 have 3 levels.

The college of optometrists only has qualifications in 2 of these with glaucoma having all 3 levels that lead to a diploma and medical retina at 2 levels.

I think the College of Optometrists needs to set out the structure for all 4 of these at all 3 levels. We could then have any optometrist who has completed:

1. Independent Prescribing
2. Any 2 of the above 4 to a diploma level (ie level 3)
3. The remaining 2 at level 2

to be given the title Doctor of Optometry, a qualification that would be recognised nationally and not being specific to one university, as is the case at the present time and one for which there is full funding from the NHS for the procedures that would be carried out.

Having regulations for this standard of training would greatly help to improve patient care in the community as well as removing enormous pressure from HES and GPS. This would also standardise the training for optometrists to this level, much in the same way that the current professional qualifying exams for optometrists do, leading to a consistent and high level of community service that would be convenient for patients and save the NHS much funds

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Many points already mentioned.

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above
and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Not Answered

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Not Answered

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Not Answered

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not Answered

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

over 13 being able to have online sunspecs

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

sight test recalls extended to three years

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

sight testing recalls extended

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not Answered

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Eye exam / refraction

Dispense under 16

Fit contact lenses

Mecs/cues

Supervision of students/pre reg

Supervision of delegated tasks

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Eye exam/refraction

Contact lens fitting

Contact lens aftercare

Supervision of students/pre reg

Supervision of delegated tasks

Dispense or supervision of u16

Mecs/cues

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Dispensing to vulnerable groups
Myopia management

Both take more specialist knowledge

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not Answered

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Not Answered

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Not Answered

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Not Answered

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not Answered

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

People with learning difficulties and dementia have different needs

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

To ensure everyone gets the care they deserve without the risk of being taken advantage off, financially and otherwise

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not Answered

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

People could purchase the wrong lenses, or not be given instructions on insertion and removal, or proper aftercare.
Risk of infection or serious damage increases

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not Answered

Please give your reasons and provide any evidence to support these.:

Poor fitting lenses,
No insertion and removal instructions
No wearing and caring guidelines given
No aftercare

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not Answered

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not Answered

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

As per now the testing of sight etc should all remain protected, one of the great things about optometry in the uk is that the testing of sight is done only by qualified optometrists which means the public benefit by having a thorough eye health check every time their sight is tested and in the UK without this many many eye conditions like glaucoma would go undetected as there is no other way that the public is screened for such conditions. Much of the pathology that is detected, referred and treated is through asymptomatic screening and regular checkups.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

The uk has a well functioning, safe, accessible and efficient eye care service and all the activities that are currently restricted to registrants must continue to be so as this ensures that the public receives comprehensive eye examinations from the appropriately qualified individuals.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Inspections would be well received as some of the dangerous practices such as ghost clinics and other practices that can put the public at risk would be experienced first hand and it would give the GOC a better insight into the commercial influence/pressures that registrants face which would help scope better future policies and guidelines.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

No. It is the GOC's job to protect the public and such a move would be contrary to that function.

I and many of my colleagues refract patients first before examining eye health as the refraction, how patients respond to questions during the refraction can give strong cues as to the sorts of pathology that maybe present. For example a patient may complain of the words in the centre of their vision being blurred or missing which would direct us to put more emphasis on examining the macula & other patients may perceive a colour difference when viewing the chart between eyes & this could indicate presence of cataracts or optic nerve pathology. The way a patient responds to the questions asked during the subjective refraction, how much time they take to respond, the level of difficulty someone is having reading a line of acuity, ALL of these things build a picture in the Optometrists mind as to what sort of pathology could be present & what to look for. If the refraction had been delegated all of these safety critical cues could be overlooked by someone who is not also trained to examine and look for disease like the Optometrist is & this would be of huge detriment to the patient.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Separating the refraction from the health check is only of detriment to the safety of the public. As i outlined above the refraction, the responses a patient gives during this process & other observations that are made both by the patient and Optometrist during this process help shape the remainder of the eye examination and it is an integral part of the examination process and cannot be treated in isolation without huge risk to the public. A D.O carrying out the refraction and treating these results in isolation would lead to poorer prescribing, often what we prescribe will be influenced by the OMB status /history and eye health observations also and CANNOT be done safely in isolation

Apart from the possible benefits to the commercial corporations in training D.O's to refract as a cheaper form of labour I cannot see any benefits to anyone else. it certainly is not in the best interests of maintaining public safety or in the best interests of maintaining standards within the profession.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The main advantage would be that we would continue with what is a safe and efficient delivery of primary eye care services. The best part of optometry in the uk is that the testing of sight is linked directly to the checking of ocular health & for the huge benefit of the public this must remain linked. Separation of these 2 would create an unnecessary and avoidable significant risk.

I have seen patients who have previously only had refractions in countries like india and I have often gone onto find pathology which has been undetected previously as they simply opted to have a refraction to buy glasses whilst in india and " no one checked their eye health". If we were to change the sight testing legislation it would be a huge step in the wrong direction! Especially in such economic times, many patients may choose just to have a refraction which would in the long term have a hugely negative impact on the populations eye health if conditions like glaucoma go undetected for longer, get picked up later when they are harder to treat and have become established. We should be looking at ways to improve our service delivery, not move backwards to put the public at risk when there is no need and certainly no strong evidence for change.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

NO but my own opinion is that a significant portion are referred and more when the patient is seen by an optometrist who is more knowledgeable, the more conditions we know about and more of their signs the better we can look for early signs of disease and manage or refer on appropriately. Without having eye health and refraction linked together so much more pathology would go undetected. I can say for sure in my experience MOST of the referrals for conditions like glaucoma come out of routine exams where the patient is completely unaware that they have a problem and with such conditions they do not produce symptoms until is far too late and this is why the current model of a comprehensive eye test with refraction and eye health check done by the SAME optometrist is key to safe eyecare for the public.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

We would continue to provide a safe fitting and aftercare procedure which is working well at present, no strong evidence for change in my experience

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

Current groups are sufficient

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

NA

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

To do this would put millions in our population at risk as contacts are a medical device and often we see the detrimental impacts on eye health of patients who buy and are supplied with contacts from companies abroad who dont comply with uk legislation. I have seen many such patients who have ended up with scarring of corneas and other complications as they were supplied with contacts WITHOUT fitting or regular aftercare. Such a change in legislation would ONLY be harmful for patients and the wider public

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Apart from speeding up the supply of CL SPEC there is no benefit but the main benefit of keeping it as it is now is that EACH SPEC is checked, I for example will check all details are correct and ensure the spec/rx makes sense based on the checkups findings and all of this diligence BEFORE verifying means a much more safer process to protect the public.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Minimum checks such as history, asking about any problems, vision, CL fitting check, anterior eye health check and FLU assessment also

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

I have often seen patients, especially young girls who have bought such contacts in shops and been wearing unsupervised, these are often poor quality low dk contacts and such patients have been found to have corneal neovascularization and other complications. Such cases would become commonplace if the requirements changed

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Please see above, to protect the public's eye health, to ensure these medical devices are fit for the patient and do not damage their eye health

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

Without this many of the patients who have their eye health checked as part of our current comprehensive eye care model would not have this done, this would lead to more undetected pathology and an ever more increasing burden of poor eye health on the NHS which is already struggling.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantages would be NO regular eye health screening and MUCH MORE undetected eye disease which is only picked up often because the patient needs to have an eye test to purchase new spectacles

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

A brilliant SAFE model which ensures eye health is checked on every sight test and the patient receives the best eyecare. Without the current model many more patients would lose their sight, it would be a move in the backward direction

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes - a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

An example is telemedicine and I have heard from friends that many conditions were missed by Gps during the pandemic as patients were NOT seen in practice. For triaging purposes or history taking doing such things over technology phones etc is fine but not for examining eye health etc or conducting sight tests

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Consultations
Contact lens fitting
Dispensing of any optical aids

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Any form of eye care consultations

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Selling optical appliances to adults should also be restricted

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

There is a noted increased need for low vision services linked to increasing access to these services as dictated by the IAPB; registers of low vision practitioners should be made so the visually impaired public that needs such practitioners can easily find them.

Same applies to specialist contact lens practitioners fitting hard lenses as these are not services readily available in every optometric practice.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Very important part of a sight test is the health check; just refraction will mean one can go a long time without the ocular health check which could be of negative consequences in the event pathology develops.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Negative-once refracted patients won't look for the ocular health check.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

It's not unnecessary; it's important for safety

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Continued safe practice of contact lens use in the public; a lot can go wrong easily with contact lenses only trained professionals should be fitting and dispensing these

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Geriatric patients; they already have a lot going on and the last thing they should worry about in addition to other health problems is whether they are wearing a correct pair of glasses

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Equality-improved access to care

Inclusion-be it from an old people home or their own houses they can be guaranteed to be seen by appropriately trained professionals that dispense the correct spectacles or low vision devices to them.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Uncontrolled use of contact lenses can lead to blinding conditions.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

They are necessary

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Dispensing of devices to people without a health check-dangerous practice

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Routine care connected to the use of contact lenses for all contact lens users

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Mere fact that a foreign body will be repeatedly placed on the eye comes with increased risk/threat to good ocular health which should be monitored and the risks mitigated

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Good ocular health for all

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

N/a

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

It guarantees an ocular exam happens routinely

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage-missed ocular health check opportunities and patients can't always tell when the prescription is now too strong/too weak for them.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Routine ocular health check opportunities and use of updated prescriptions for best visual performance

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It's important to ensure correct materials are used for different visual aids-some introduce more harm than offer the safety they should

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Continued safety for children using optical appliances in sport.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Telemedicine for emergencies increases access to crucial care in challenging times

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Increased access to care and inclusion of marginalised societies

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

N/a

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

N/a

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Some of the procedures and prescriptions coming under IP are widely taught in the undergrad programmes. It's important that the GOC acknowledges this shift to include diagnostics in undergrad programs and scope of practice is amended to reflect these changes

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

refraction, ophthalmoscopy, contact lens fitting/assessments and contact lens checks.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

refraction, ophthalmoscopy, contact lens fitting/assessments and contact lens checks.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Clinic Management, unfortunately the reality in most practices is that the clinic is managed to maximise revenue rather than patient care and staff well being. Walk-ins are often booked without checking with the optometrist whether it is feasible, clinics are often overbooked and include ghost clinics and testing times are often squeezed to the bare minimum. This results in poorer patient care and poor staff well being. It's unfortunate that the GOC pay no attention to this or do not seem to anyway.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Yes the GOC should inspect and scrutinise business owners to ensure they are providing the best patient care and are not cutting corners simply to drive profits. Basic things like having adequate equipment that works, sufficient clinic times, well trained staff and ensure lies and deceit are not used when selling to patients.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Dispensing opticians without knowing the individual's circumstances and the health of the patient's eyes will not be able to carry out the best possible refraction and advice that is needed for optimum patient care. Also this move would only benefit business owners and not the patient in any way. The business owners will be able to see more volume with less staff and that's all they're interested in. Why would a patient want to be seen by two separate staff members for refraction and then ophthalmoscopy. This is counterproductive and not in the patient's best interest. There are many occasions where a refraction needs to be tailored due to ocular health or patient history and this can only be done effectively if this is all done by one individual. It is unfortunate that the GOC are considering this change and only puts doubt into how the GOC is run and who they are trying to benefit.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

advantages: None for patients or staff - the only advantage would be for business owners and increasing their profits.

Disadvantages: Poorer quality patient care, less tailored service, less knowledgeable staff carrying out refraction.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The current legislation that allows only optometrists or RMP to carry out refractions is in the patient's best interest and provides the best care.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The current legislation works well. It ensures the refractions is done by a knowledgeable and well trained professional who understands the patients health of the eyes and can tailor the refraction to best suit the patient taking all this into account.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

The only data I have is my experience and I have seen optical assistants and dispensing opticians with terrible patient care. These types of individuals only care about selling and no care for the patient.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

An understanding of ocular health is very important for this. Allowing unqualified staff to fit contact lenses is unwise.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It allows knowledgeable professionals who understand ocular health to best assess and fit patients with contact lenses ultimately proving the best care to the patient.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/A

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

It works well to protect the patient

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

yes, allowing less knowledgeable staff to make key decisions will reduce patient care

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

it works well as it is

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/A

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

it works well to protect the patient

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

if sold without restrictions and proper advice/care, risks of CL related issues could increase

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

it will ensure patients are cared for in the best way possible and reduce the risk of avoidable CL related eye issues

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

N/A

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

patients could end up with incorrect lenses

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

it protects patients from being dispensed incorrect spectacles.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

they could be dispensed the wrong appliance with incorrect lenses/measurements and can easily be victim of overselling

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It protects patient's from the disadvantaged mentioned above

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

The sale of online spectacles and contact lenses needs to be regulated by the GOC to the same standard as practices are. Patients often come in with hypoxia and other issues related to low Dk/T lenses purchased online with no checks of advice from registered professionals. Also incorrectly dispensed spectacles are very common and this can create a big issue for example for drivers where incorrect measurements can lead to unwanted induced prism and aberrations. It's bizarre that on the high street patients are protected yet the online retailers are free to do as they please with no duty or responsibility. of patient care.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If online retailers are regulated just as high street practices are it ensures patients are protected no matter where they choose to purchase their spectacles.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Certain machines trialled by [redacted] called [redacted] where essentially an OA is doing refraction and the optometrist is asked to sign the prescription given by this machine. I have worked with this machine for a long time and have found the refractions if often far off what it should be and this risks patients being given incorrect spectacles. This needs to be regulated and addressed. I have done many remote care contact lenses end of trials and it is not at all in the best interest for patient care where vision, ocular health and contact lens fitting cannot be seen in person.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I have done many remote care contact lenses end of trials and it is not at all in the best interest for patient care where vision, ocular health and contact lens fitting cannot be seen in person.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Certain machines trialled by [redacted] called [redacted] where essentially an OA is doing refraction and the optometrist is asked to sign the prescription given by this machine. I have worked with this machine for a long time and have found the refractions if often far off what it should be and this risks patients being given incorrect spectacles. This needs to be regulated and addressed. I have done many remote care contact lenses end of trials and it is not at all in the best interest for patient care where vision, ocular health and contact lens fitting cannot be seen in person. I have done many remote care contact lenses end of trials and it is not at all in the best interest for patient care where vision, ocular health and contact lens fitting cannot be seen in person.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

ensure all technology is thoroughly tested to ensure it is providing better patient care rather than an excuse for practices to reduces testing time while compromising on patient care.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

The sale of online spectacles and contact lenses needs to be regulated by the GOC to the same standard as practices are. Patients often come in with hypoxia and other issues related to low Dk/T lenses purchased online with no checks of advice from registered professionals. Also incorrectly dispensed spectacles are very common and this can create a big issue for drivers where incorrect measurements can lead to unwanted induced prism and aberrations. It's bizarre that on the high street patients are protected yet the online retailers are free to do as they please with no duty or responsibility. of patient care. If online retailers are regulated just as high street practices are it ensures patients are protected no matter where they choose to purchase their spectacles.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

regulate online retailers and high street retailers in the same way to ensure patient care is consistent and the best it can be wherever the patient chooses to purchase spectacles or contact lenses.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Regulations needs to be set for practices and not just registrants. Practices very often abuse patient's trust and compromise care simply to drive volume and profits.

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Fitting and supply of spectacles to children .
Fitting and supply of contact lenses.
Refraction .

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Performing eye examinations, fitting and supply of contact lenses.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

The eye examination should not be broken down into further stages. We already have pre tests being done by unqualified staff. We should insist on the whole eye examination being conducted ONLY by a fully qualified optometrist.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

There is no advantage other than the big multiple high street opticians pocketing more profit.

The disadvantages are the eye examination. Will be broken up accordingly and there will be no link between possible pathology and refraction - only one person should be allowed to conduct all tests in order to fulfill complete analysis of the individual patient needs.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

We should not be referring to health care as financial - it obviously makes an outcome for a lot of people but to allow dispensing opticians to conduct a refraction is purely for only financial gain and corporate greed.

The sight testing legislation must remain as it is in order to not tarnish the industry anymore than what it has due to the influence of the multiple high street opticians. Optometrists work hard to gain their qualifications in order to conduct eye examinations - to deregulate such a profession would be gross injustice to all the optometry students of past present and the future!

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It would mean that the general public could rely on being fitted and supplied contact lenses by fully qualified professionals - what more could you ask for when it comes to health care!!!

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Not sure

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

It's not rocket science your opening up a ticking time bomb. Prescription contact lenses sales only to be supplied by a qualified professional forever!

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

No they don't because it means the patient is receiving the correct lenses as it has gone through a fully qualified individual before being supplied. It's the only way of verification to a GOLD STANDARD!

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There would be more be a severe increase in the wrong possible information being released to the patient. This cannot be allowed to happen.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

To assess the current wearing schedule of a present contact lens wearer.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

More chance of severe corneal infections if this is allowed to happen!

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

The patient would know the full implications of the risks taken by wearing such contact lenses

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There's not a massive market for zero powered contact lenses as what there used to be so financially I don't think there's massive gains to be made of legislation changed.

The main advantage of legislation remains as it is that the patient is getting the full picture of all the potential scenarios if they chose to wear such contact lenses.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

N/a

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Of course it is as if it is not there we allow patients not consumers to possibly get certain ocular pathology that could have been easily avoided.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

No as it makes sure the patient is more likely to be wearing the most up to date prescription which is only for their benefit.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage would be that the prescription could have changed and they are not as aware of the change and could lead to possible legal cases for example in a road accident where the perpetrator was not seeing to the required dvlA regulations.

The advantage is obviously the opposite to what I have stated above!

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantages are the general public can rest assured that every spectacle wearer is seeing to the most up to date prescription as possible. The ones who are not would only be of their own choice.

There's no disadvantages as far as I can see.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Parents have told me they would always want to make sure the supply of sportswear to their children was overseen by an optometrist!

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Only advantage is they can buy them straightaway. The disadvantage is they don't know if what they are buying is appropriate for their individual needs.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage is the profession would stand up a lot more professionally in they eyes of the general public.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Not sure

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

N/a

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

N/a

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

N/a

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

N/a

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

N/a

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

The optical measurements for spectacles such as pupil distance and heights should only be performed by a fully qualified professional. I have had lots of patients come in to practice after purchasing online spectacles that were inadequate for their needs due to incorrect measurements taking place in the glazing of spectacles.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Not really sure.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

N/a

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

N/a

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

N/a

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

N/a

Further information

56 Can we publish your response?

Yes

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Everything that is restricted at the moment

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Just as it is currently

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Aftercares
Teaches
Visual Fields
Pressure test

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

High risk of infection, prior eye conditions which may lead to more eye health problems.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Lead to more detrimental eye health conditions if not regulated properly and checked thoroughly by fully qualified optometrists

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Decline in quality of vision, could affect and cause serious problems i.e. with driving and safety etc

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Financial impact should not be an issue within optics. The first port of call should be the patients well-being and health, especially of the eyes. The fact that financial is even a factor in changing regulations is ludicrous. To whom do we owe our allegiance too, the businesses or the public?

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

The consultation is too broad and risks deregulation due to the current governments ideology rather than patient safety

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

I do not believe anything should be deregulated. Clearly there was a lot of thought put into the 1989 act by a government hell bent on deregulation and even they wouldn't go further due to the risk to patient safety. I do not believe that the risk profile has altered since then. The only thing that should be done is to close any loopholes e.g. remote supervision of sight testing, supply of plano coloured contact lenses, contact lens supply from abroad without prescription etc. Also the body responsible for pursuing breaches shouldn't be the GOC, or at the very least the GOC shouldn't be prevented from pursuing individuals and companies through the courts due to finance concerns.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

the same as now. I do not see any need for more or less regulation apart from the closing of loopholes

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

None come to mind

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

The GOC should have the right to regulate new skills that may come into being due to advancements in technology

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

Most businesses are ethical but it is unethical to set commercial targets for optometrists that link to the sale of spectacles or how quickly a patient should be seen. Frankly its a black mark against the GOC that they do not properly prevent this.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Most businesses operate within regulations but some get away with breaches for years which gives an unfair and unethical advantage to those businesses and puts patients at risk.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

There are many subtle clues to pathology that can become apparent to an experienced optometrist while refracting that cannot be taught

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

see answer to 15

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I do not see any obvious disadvantages to keeping as is. Deregulation would make it easier to exploit those who may have financial issues or other hard to reach demographics

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

In fact loopholes in current regulation around plano coloured lenses and supply of contact lenses from overseas but with a UK fulfilment centre without a valid prescription but patients at risk

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

it does disadvantage poorer people BUT they would otherwise be at risk

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

There is definitely an argument for extending to vulnerable adults e.g. dementia but I can't think of a mechanism that doesn't result in complaints from those who think they aren't or complaints where someone is not identified.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

the advantage is that those vulnerable adults wouldn't be taken advantage of and would have optical appliances better suited to them

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

In fact loopholes put the public at risk of sight threatening eye disease

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

would put the public at risk of sight threatening eye disease

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

would put the public at risk of sight threatening eye disease

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

would put the public at risk of sight threatening eye disease

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Taking history necessary for a contact lens aftercare. Assessment of the acuity with contact lens. Assessment of any change needed to the prescription of the contact lens typically by over-refraction. Verification of suitability of the fit of contact lenses. Examination of the anterior eye including lids to determine any pathology, or adverse effects of contact lenses. Issuing advice regarding wear and contact lens care. Effecting any change in the parameters of the contact lenses as a result of examination.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

the barriers are necessary for patient eye health

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

The risk of harm is greater due to the fact these are delivered in a fashion environment with the same perceived risk as wearing different shoes

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

As well as legislation the GOC needs to be able to pursue suppliers without a financial risk to them, perhaps via criminal charges/Crown Prosecution Service

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

see answers above

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

n/a

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Contact lens sale and supply

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Yes

Please give your reasons and provide any evidence to support these.:

I find it amazing that you need to ask this question. The whole point of requiring an internal and external examination when prescribing is to ensure there is no sight or even life threatening pathology. If you allow the supply of spectacles beyond 2 years you weaken the protection of the public potentially catastrophically

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

see above

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Unregistered suppliers are in no position at all and have no professional responsibility or jeopardy when making a judgement about supply beyond 2 years. IT IS A CLINICAL JUDGEMENT not a commercial decision.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

The risks are greater with sportswear as the risk of poor fitting causing injury in higher risk environments

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

see above

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I do not consider the reduction in availability or increase in cost of appliances to be a reason to put young people in jeopardy

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Public protection is served by keeping as now

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

With suitable regulation that does not relax or reduce patient care. Optometrist must be on site, remote supervision is unacceptable. If it were why have has there ALWAYS been a requirement for supervisor to be present for pre-registration students? there must always be the possibility for the optometrist to intervene in person.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

There is a possible loophole relating to remote supervision of sight testing and this needs to be closed/there needs to be specific wording forbidding it

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

specific wording preventing remote supervision of refraction. The power to add restrictions where these close loopholes in the future

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

No verification of age of prescription, no verification or accountability for incorrectly manufactured spectacles e.g. PD/OCs. see previous answers

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

regulation

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Allow prosecution to be done by or funded by the crown prosecution service

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Clinical investigation. Contact lens removal. Low Vision and Paediatric Dispensing. Refraction. Recording Vision and Acuity.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Low vision and Paediatric Dispensing.

Eye Examination.

Refraction (spectacle and contact lens). Delegated clinical screening for correct interpretation.

Emergency triage.

Contact lens insertion.

Contact Lens removal.

Effectivity calculation for vertex distance. Writing of prescriptions.

Prescribing eye health treatments.

Protective eyewear and sports eyewear dispensing.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Emergency Triage.
Clinical advice and interpretation.
DVLA Assessment

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Refraction for dispensing opticians. Would free up valuable time for Optometrists to see clinical concerns that present in emergency without pressuring services. The refraction can be performed in order to troubleshoot refractive errors in the event of absence of pathology in order to correct distant and near vision requirements. The refraction can be performed to dispense the most up to date prescription. Further training will allow Dispensing Opticians to recognise any potential for pathological circumstance and involve optometrist for further investigation (example: myopic shift due to cataract , VA no improvement best possible 6/12 , refer to Optom for dilated examination and discuss surgical intervention). Models in other nations have proven success and ABDO students from Malaysia must pass the refraction exams whilst British students are unable to do so.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Don't think optometrists are scrutinised enough. Internal audits present no real change in behaviours. Many records are lacking and critical areas of expertise left incomplete when required for troubleshooting. External audits on a consistent basis would tighten compliance.

Online internet based companies must be held to higher standards of regulation. Businesses (not optical) must be prohibited from selling spectacles and contact lenses without prescription (ready readers and Halloween lenses). It is to the detriment of public perception of the community optician where people can purchase products which deteriorate their vision in the long term and can be a risk to their sight and overall ocular health.

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

Hopefully this model would allow optics to work similar to how pharmacy works. Qualifications for support staff and more emphasis placed on the skills of the Dispensing Optician (who operates more like a community pharmacist and supervises every aspect of the team) and allow the optometrists to run their clinics knowing support is optimised with the expertise of a registered Dispensing Optician being involved in all decisions made when patients emerge with ocular health concerns.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – with no restrictions

Please give your reasons and provide any evidence to support these.:

Dispensing Opticians undertake special qualifications (already offered by a British institution, ABDO) and show proof of a number of refractions competently performed without the requirement for re-test within a defined period.

I believe no restrictions are required as Dispensing Opticians already have expertise at recognising when clinical intervention would be necessary when sight deterioration may be quickly encountered (cataract, AMD etc) and can competently refer on to an optometrist if VA is poor and cannot be improved.

Another reason for no restrictions with overview from an optometrist is that the expertise in the actual appliance is greater understood by the Dispensing Optician. Many optometrists have an extremely poor understanding of the consequences of refractive changes in lieu of spectacle lenses which results in remakes when the Dispensing Optician would have greater understanding of the consequences. From experience I've seen optometrists recommend varifocals to AMD and end stage RP patients. Reduce the plus power in the distance of a patient due to cataract and ignore that they were a +6.00 at near and now left a +3.00 with no compensation for the loss in spec mag and that the extra mag helps them see clearer at near due to the bigger image as technically you could consider low vision at near if VA is 6/15 and N14 is the best they can achieve with their Rx. Food for thought.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

The only disadvantage is Optometrists possibly feeling demeaned and undoubtedly look to stop it from happening with no real basis other than "it's part of our remit".

What must be remembered is the advantages dispensing opticians bring and can help absorb a high workload and actually work with the dispensing optician and learn how they would adapt their refraction to the actual appliance in terms of spectacle lenses, the dispensing optician learns the consequence of pathology and where intervention is necessary and everyone is able to upskill within the profession.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

If a dispensing optician suspects a Rx is wrong and can see by a VA check that a customer gets better near vision with new glasses but poorer vision in the distance (which is better with old glasses) it should be fair to say that the Dispensing Optician should be able to modify the Rx without fear they are breaking refraction regulations.

Example:

New Rx +3.00 R&L Add +1.50 (VA 6/10) N5

Old Rx +2.00 R&L Add +2.00 (VA 6/6) N8

A Dispensing Optician shouldn't have to send this to an optometrist. The VA check has found adequate distance vision with the old Rx and can see by modifying the add to a +2.50 we would achieve the same near Rx as the new which gives N5.

At present the only intervention for distance Rx is an effectivity calculation for vertex distance.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Dispensing Opticians are left stagnant and cannot progress skills. Already it's depressing that the high skills taught have a "you can look ... but you can't touch" attitude. Learn refraction, but you aren't allowed to ever do it. Use a retinoscope during your learning years but you'll never use one.

There is already an attitude from non registrants that they are more or less on the same level as a dispensing optician and companies jump on the bandwagon and value their dispensing opticians similarly.

The salary in comparison is disgraceful in light of the pressures a dispensing optician currently works under and the expertise and stability they bring to a business.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantage is in view of public health. If the public pursue contact lenses without professional advice this will ultimately lead to misuse and poor compliance which will result in increased ocular health cases and cost the NHS more money. This cannot be allowed to happen and online companies must be regulated if they sell within the UK. Not find loopholes because they register their head office in a foreign country.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Absence of patient management means the patient cannot be educated on compliance. Poor compliance leads to ocular health problems.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The registrant is more likely to access the patient record and look at the spec and relevant advice that may be overlooked by non registrants can be delivered (wearing schedule, solution recommended due to allergy for example)

It would be more appropriate remaining a verifiable specification as too many factors for consideration are involved.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Patients find it an inconvenience and looking to find ways to avoid this and still obtain their lenses.

A strict definition of what must be undertaken at the aftercare should be outlined as it's too often practices find a contact lens aftercare should be a "10 mins" in and out appointment. It's hard to see how a valued service every 12-24 months can be properly delivered in 10 mins and businesses should be allowing time for a clearly defined regime of checks during an aftercare.

The aftercare should be valued rather than looked at as a quick check that is an inconvenience barrier to obtaining the next batch of lenses.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Must avoid the general public having access to poorly manufactured and cheap cosmetic lenses that would risk ocular health and increased costs for the NHS to treat.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Only registered optical business should be regulated to sell such appliance and online companies must be made to register with the GOC to comply and trade within the country.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Some patients will find it a barrier to purchasing spectacles removed and won't bother having routine eye examinations or refractions.

The patient with the 12 year old prescription and can't tolerate any change to their refraction is always a challenge and something we must discourage rather than encourage.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Inappropriate fitting appliances not fit for purpose.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protections that the appliances are safe , of good quality , and fit appropriately.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Remote care helped through the pandemic as a majority of presenting eye concerns are not emergencies and can be solved with topical treatment or a treatment regime and can be investigated further if symptoms persist or worsen.

Helps take the burden off practitioners as too many people can simply walk into an optical practice and all want seen there and then.

We must be more managed and take the approach of a GP surgery.

Community pharmacy are awful at managing patients with eye concerns and must stop stating walk in clinics are available when they aren't.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Online selling of contact lenses is far too loose. Specifications do not need verified to purchase.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Businesses must register with the GOC mandatory.

If opticians and optometrists must register be under scrutiny as professionals , all businesses selling optical appliances should be no different.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment,

pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Sight tests / refraction
Dispensing glasses to all

7 What activities do you think must be restricted to our registrants?

Please provide details.:

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

You need to follow what the new Zealand board does

Audit record card/ notes

Referral letter

Quality of referrals ie letters back from HES and the outcome of the referral

14 Is there an alternative model of business regulation that we should consider?

Yes, another model (please specify)

Please give your reasons and provide any evidence to support these.:

New Zealand optical board

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

I think all patients should only be dispensed by a qualified person

But i know you won't do that so restrict to the following

Children

Visually impaired

Those with a learning disability

Those with facial abnormalities needing specialist frames

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Regulation, you can regulate ensure standards and protect the patient.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

Need to make it clearer regarding low vision aids

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

There should be some consideration for current optometry under graduates who have made an investment into their education and may be qualified into a profession that is significantly changing over the next few years.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction

Testing of sight

Prescribing of spectacles and contact lenses

Dispensing of optical appliances to children, learning disabled, sight impaired and other vulnerable members of society

Interpretation of any clinical results

Referral to secondary care

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction

testing of sight

prescribing of spectacles and contact lenses

dispensing of spectacles to children and learning disabled and sight impaired people

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Low vision assessments

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Registrants should have to have some accreditation to interpret OCT and [redacted] results.
All registrants should be DBS checked and complete safeguarding training in order to perform their sight testing duties

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

During a refraction completed by an optometrist there is much more than a refraction being performed. Many crucial clinical signs can be picked up by a fully trained optometrist which may be missed/disregarded by a dispensing optician. Eg, pupil abnormalities, binocular vision issues.

Over the past 20 years public awareness of the health benefits of a sight test have been growing, if the GOC were to amend its statement to allow the public to have a refraction to just but specs without the health check, pathology would be missed and sight loss would increase.

GOC should be protecting the public by ensuring that a qualified optometrist performs a full sight test in order to manage and prescribe.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Advantages - None

Disadvantages Increased sight loss
Public health significantly less protected
Disrespect for the optometry profession as a whole

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage Continued protection of the public by ensuring full complete sight test performed

Disadvantage - optometrists in England unable to do follow up monitoring checks eg. fields and pressures

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantages Protecting public eye health

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Learning disabled

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protection of a vulnerable group

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Any one could write in any specifications and therefore contact lens associated pathology would increase, sight loss would increase and people may be wearing inappropriate prescriptions for driving etc leading to potential death

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Visual acuity checks

Full anterior eye examination including the use of fluorescein staining

Check of the fitting of the contact lens

Observe the patient compliance to hygiene and care of contact lens use.

History and symptoms should be taken and appropriately managed

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

No

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There needs to be regulation so that non registered business and internet businesses are not allowed to sell plano 'fun' contact lenses.

Advantages of legislation remaining is protection of public eye health

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

n/a

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantages poor eye health, missed pathology, people wearing wrong prescriptions and being unsafe to drive etc

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protection of the public by ensuring correct prescription and eye health have been checked

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Ill fitting, dangerous and wrong prescriptions would be worn by children. Could be disastrous

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Keeping children protected

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Keep people safe

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

There should be rules as to when it is not appropriate for an optometrist to view clinical results remotely and act on them.

As a general rule the optometrist should always be on site to interpret clinical results and manage appropriately

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

unsure

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Online sales need to be regulated.

It is not safe for people to be able to purchase online with out a registrant who has examined the patient verifying the prescription and specifications

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Verification by registrant must be compulsory

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

regarding the testing and dispensing of the learning disabled

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Sight test

Health checks of eyes

Providing glasses to children, and vulnerable adults without supervision

Dispensing/providing contact lenses

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Above

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Things within scope of professional.
Further training for eg IP

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

YAG, glaucoma/macula

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Refraction is part of sight test, it gives invaluable information and insight into the patient. Hence it needs to be part of the health check. It can't be separated

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Financial- rechecks, responsibility with optom/DO?
If something is missed- who does responsibility fall on- disagreement between colleagues.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Refraction is important part of sight test, part of history and sxs and general information regarding px habits and behaviour get picked up during refraction, also px if feel uneasy can feel more relaxed by the competency of optom.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Have seen increase in patients who get lenses online, then when they have issues return to us as professionals to fix issues which can be sight threatening.

The easier it is for them to buy their lenses online, the more px's we see with complications

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Need more strict rules in regulating and holding the online suppliers to account for supplying lenses without the checks

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Some high prescription and patients requiring prism

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Too many of these patients come back to practices to fix the problem created as measurement are not correct

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

This is needed for patients safety

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Already there is not enough to control the online sale of cl's

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

It is needed

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This is needed for patients safety

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Seen by professional CLO/optom

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

It is required to keep the public safe

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

It is already difficult to regulate these. Especially young people are getting coloured lenses online and they have higher risk of damage to eyesight due to non compliance and not getting the check ups

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Yes to protect the public

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It would cause catastrophic effects to health of young individuals who don't have the hindsight of the impact of infections

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Lots of people are not aware of consequences to their eyes

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

It is required to protect the public

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If prescription changes? Or there are health issues, patients won't be aware of this and cause longterm issues

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It is required to protect the public

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

It is required as more likely for injury and longterm effect of injury

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Longterm damage to sight will have effect on mental, financial and physical ability of child

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It is required their safety

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It is required to protect the public

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Ophthalmology

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction.

Ophthalmology

Independent prescribing of therapeutics

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Practice ownership

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Safe clinical service for the patient

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

No

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage in that patients could go for many years avoiding an examination-particularly drivers

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Supply of inaccurate appliances to minors

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Supplier subject to GOC regulation and answerable for errors

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

I strongly feel that refraction and the health of the eye are connected and during a refraction the patient can say things which can give clues as to the state of the health of the eye. If these are separated that can be missed entirely.

In the past 2 weeks I have seen 3 cases of Wet AMD which started by the patient describing things happening in their vision during the refraction.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

refraction
examining the health of the eyes
fitting contact lenses, especially new fits.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction
Examining the health of the eyes
Fitting contact lenses

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

None

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

I believe that the current recognition of post registration skills is adequate

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

I am not very familiar with this so can't comment.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

again I am not too familiar with this

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

I think regulation by visitation/inspection is always a good idea

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

I am not familiar with this so difficult to comment.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

I feel it would be a grave error to separate refraction and health examination. The refraction is a major part of the eye examination and should be undertaken by the same optometrist. There are too many things that can be missed during the refraction. Also I think that patients would find it strange to see more than one person for the whole sight test.

I saw a patient yesterday who went for her [redacted] Visual field test and was most pit out that she was seen by 4 people for this !!

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

As I have said previously the refraction is too closely linked to the health of the eye.

When this subject was raised some years ago I was working in a practice owned by 2 Dispensing Opticians. One of them tried a refraction on a patient with very high astigmatism and got it all wrong.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I see no disadvantage to this. I currently work in an independent practice and there are no issues.

I think this change is being pushed by the multiples, especially the [redacted] one to somehow further their profits.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

Only personal view and the majority of views on the [redacted] website

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

i think the current legislation protects the patient, mainly in terms of eye health

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There are no disadvantages.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

I think the current legislation is adequate as it is

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

I think that contact lens sale is good as it is. Unregistered sellers are not a good idea, as patients would carry on having no health checks, or buy contact lenses with no idea how to handle them correctly.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Un registered sellers would sell contact lenses with no regard to patient health or safety

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

the system works well as it is.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients can be unhappy with the system as it is, but can be unaware that the system at present exists for their health and safety

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Aftercare should specify what should be done at an aftercare visit.

ie. Checking VA with C/Ls, making any necessary adjustments to the RX, checking the fit of the lenses, checking patient handling and care of the lenses, checking the health of the eye once the lenses have been removed.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

I think these should be treated the same way as powered contact lenses.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Patients could buy these anywhere with no regard to fit and/or handling, or how to look after the lenses. This could lead to all sorts of issues.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

The reasons are still as the last answer.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There are no disadvantages, only to those people who want to buy lenses for Halloween and the share them with their friends.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

There needs to be regulation to stop unscrupulous sellers selling poor quality frames and lenses.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

There needs to be a time scleras on the validity of a prescription otherwise patients will be sold specs which are not fit for purpose. In terms of frame fit and vision

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients could buy any specs to any prescription and so easily this could be a waste of money as th vision could be impaired.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I don's see and disadvantages to this current legislation.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

This is a vulnerable group and frames and lenses should fit properly

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

These could be bought and there would be little regard to the proper fit and correction of vision

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I think there are no disadvantages

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

i can see no disadvantages

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

As patient safety is the primary objective for the regulator then it should not be described as being part of a 'non heirarchical' list of objectives. It should be placed as the primary and overriding objective.

I believe that all of the questions below should only be judged under the criteria of 'is there a compelling public/patient safety' benefit? If evidence or insight shows there'll be a demonstrable negative impact on patient and public safety from proposals, or no provable benefit then this would surely take precedence in ruling out any changes?

I also believe that as the GOC progresses with its thinking, it should undertake a literature review and present the evidence and data against the proposals that would illustrate if there is a public/patient safety benefit, particularly on those areas where there is a likelihood of fragmentation of or risk to patient care.

I also consider that no legislative proposals can be put forward without a consideration of the wider funding and policy context in terms of delivery of primary eye care and specifically the General Ophthalmic Services contract.

Some introductory context would also be helpful for the consultation, which recognises that some of the limitations in delivery of eye care arise from effectively a low fee for GOS and how it acts as a 'loss leader' cross subsidised through the sale of optical appliances, which then in turn leads to both a public perception that optical care is driven by business/retail needs, and from GOC's own surveys of registrants, leaves some registrants also under pressure on patient throughput and targets, while the GOS voucher system for glasses can also incentivise over prescribing. For patients who may be "less easy" to test such as very young children, people with a learning disability or much older patients, there may also be less inclination to see these patients given they are more 'time intensive' and there is also some evidence that the funding system also acts as a disincentive establish practices in areas which are socio-economically deprived.

The underfunding of the NHS sight test has led some contractors to hand their contracts back to the NHS, but in England it has also led to development of 'additional' pathways to supplement the NHS fee through local negotiations with commissioners for more comprehensive clinical care.

Some of this is arguably what should be part of the standard sight test but cannot be delivered within the constraints of the fee. This includes the community learning disability pathway in England where CCG's effectively 'top up' the fee with a locally negotiated supplement. NHS Scotland now has a GOS funding system where different levels of clinical input are funded appropriately, a higher fee can be claimed for additional or repeat tests/ patients with complex needs and a similar system is being planned for Wales.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

See Q 8

7 What activities do you think must be restricted to our registrants?

Please provide details.:

See Q8

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

I would like to see greater restrictions on the sale and fitting of glasses to people with learning disabilities so these can only be provided by registrants, in the same way as for children under 16 and those registered visually impaired. The GOC should also be actively considering which groups need to be given the added protection of restricted activities.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not Answered

Please give your reasons and provide any evidence to support these.:

I am supportive of the GOC holding more details of the training, skills and qualifications of registrants. A more 'searchable' patient focussed register that could identify if registrants had undertaken post registration training to see patients with additional needs. Currently these qualifications are Professional Certificates in paediatrics, glaucoma and medical retina, Independent Prescriber Qualifications and academic masters modules in specialist areas such as the WOPEC learning disability modules.

This would also be helpful in the absence of community funded services in all special schools or learning disability eye care pathways across the country, enabling a place for us to signpost enquiries to and for patients/carers to identify practitioners. It will need to be user friendly though in terms of enabling patients/carers to understand which registrant is linked to which business.

As the regulator the GOC needs to ensure public safety through adequate qualification of the professions it regulates. How it achieves this is a matter for open negotiation with the other stakeholders such as university providers and professional bodies.

The following paper detailed the minimum reevaluation levels for all health professionals in the UK.

It shows that under the now replaced peer regulated CET system optometrists were not required to validate skills and hence ongoing validation and training is likely to be needed. The current laxer system add no additional requirements.

Continuing professional development requirements for UK health professionals: a scoping review M. Karas, N. J. L. Sheen, R. V. North, B. Ryan and A. Bullock BMJ Open 2020 Vol. 10 Issue 3 Pages e032781 Accession Number: 32161156 PMID: PMC7066625 DOI: 10.1136/bmjopen-2019-032781 <https://www.ncbi.nlm.nih.gov/pubmed/32161156>

Another paper by the same team currently accepted by OPO and in process shows that core competency skills for glaucoma work are not universally present in the English work force.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

I support more consistency and oversight of optical businesses and regulation. The split between what the GOC is able to monitor in terms of a business practice – if registered - and the role of the Optical Consumer Complaints Council is confusing for patients and the public, and there is simply just very low awareness of the OCCC and its remit/what constitutes complaints.

For some businesses such as domiciliary eye care there is an even greater case for oversight as this patient group are arguably more vulnerable and this would also be an opportunity to introduce a more explicit set of standards for domiciliary care rather than a sector led code of conduct. The reputation of domiciliary providers is not good and the regulator should be looking actively into services provided to this vulnerable group.

Primary optical care is able to deliver more advanced clinical care than the GOS contract allows for, and this is needed particularly to ease pressure on secondary care services. As NHS contracts expand and clinical advances are made, patients will not necessarily even understand not all optical practices are inspected or regulated against standards that exist in other areas of healthcare.

At the same time – as noted in the introduction - there is also increasing commercial pressure on registrants, which can have an impact on patient care.

How regulatory standards and inspections will deal with these pressures given the hybrid nature of optical care will need thorough consideration.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

I would like to understand more from GOC on how it currently utilises the business standards and what casework exists on breaches of standards. I am not aware of any annual reporting on activity around business registrants. An issue for the GOC would also be whether it would need more fundamental reform eg a review of council membership to ensure it could regulate completely impartially, while providing a fair regulatory model and having the mechanisms to rightfully engage the sector.

A further issue is what will businesses be inspected on, how frequently and where will reports be held? It is important that inspections focus on how accessible practices are for people with disabilities, for example, and willingness to make reasonable adjustments.

14 Is there an alternative model of business regulation that we should consider?

Not Answered

Please give your reasons and provide any evidence to support these.:

There are many types of regulatory systems in place across health and social care in England and these should be critically appraised for relevance to the practice of optometry and dispensing optics.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

The proposal on delegation of refraction comes with little evidence or data to support the public benefit case for it. Without seeing the evidence for a clear patient benefit (which is how the proposal should be judged), I do not support delegation or de regulation of this function. There does not seem to be any evidence of a shortage of eye examination appointments nationally and/or long waiting times. The proposal may suit commercial considerations, but in respect of eye health it could lead to further fragmentation and confusion as to the different elements of the sight test being performed by different people.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

See answer above. In addition I would stress that it is for the regulator to ask for evidence for the case to change in the context of the impacts mentioned above from those suggesting this change. If there is not a overriding benefit for the patient then the status quo needs to be maintained.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Please see my answer to Q18 below in terms of the public health and patient safety case for retaining the sight test as it is in terms of clinical requirements. We have strong objections to the proposal.

There has been a positive move in England to support clinicians who are testing patients with complex needs allowing for flexibility not to have to complete every element of the sight test, if the patient cannot comply or tolerate with all the requirements. NHS England has made this clear in a letter to all contractors, and there was no need for regulatory change to help address the need for flexibility.

In my view a primary limitation on sight testing is not so much the regulatory constraints but how willing the NHS (at least in England) is to fund the services that provide that sight test and where they take place.

The funding variability affects patient experience, and the consultation in my view should be helping make a case for 'building up' the GOS system so it is better funded rather than breaking down further into different elements.

It is well recognised that the £22.14 standard 'GOS' fee paid to practices and for domiciliary visits to day centres is well below that of the 'actual' cost of providing the requirements of a sight test, for those with complex needs such as severe learning disability, that underfunding is compounded by the likelihood that the test will need to take much longer due to adjustments that patient will need, including potentially splitting up the test into different appointments.

To its credit Scotland has gone so far as to introduce a complex needs payment and framework for sight testing, that allows for flexibility of approach but also recognises the additional length of time and so funding needed to see patients with additional needs.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I strongly object to any suggestion that the eye health element of the sight test could be split out from the refraction element. Where is the evidence that this will benefit patients?

Inevitably given serious eye health issues are often 'silent' and only become obvious later in development that the patient self reports, the proposal would undermine active case finding, as for the most part it would lead most patients towards choosing refraction (likely to be cheaper than a full sight test, if the patient has to pay). Eye health needs could then go neglected and lead to much later presentation and unnecessary sight loss.

For patients with complex needs, eye health issues are far more prevalent than in the general population, not only will people need glasses but there are many heterogenous eye conditions that people will have. Some of these will be linked to genetic conditions or syndromes, some will be linked to a higher risk of comorbidities that also cause sight problems (eg. diabetes), some will relate to severity of learning disability which is strongly associated with an increased likelihood of sight problems. These are patients that are unlikely to self report any problems with their eyesight - refractive or otherwise.

This is why promoted and targeted services are so important that can provide as much of a one stop shop of eye care (either in special schools or community LOCSU pathway areas).

There may be misunderstanding by patients /parents/carers that a refraction is a full sight test, despite what is communicated to the patient. This is known to be the case in diabetic eye screening, even in vision screening in children, I often hear from patients and parents/carers that they have had a 'sight test'. For many people there is a perception that screening is an equivalent.

In a time when sight loss is rising, much more education and promotion of the importance of looking after your eyes and eye health is needed and the sight test provides that comprehensive check that people need.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

See below

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

For both Q19 and Q20.

Given the risks to patients it would be helpful if GOC commissioned its own literature review on this issue and considered what evidence has already emerged around eg. late presentation of glaucoma cases due to the introduction and availability of 'ready readers' in retail settings.

Data on referrals into secondary care for eye health issues should be available through an analysis of GOS data. However that is not a comprehensive report because there will be eye health issues that primary eye care can also treat and support without the need for referral. So for example, within new NHS data from special schools, 2.8% of children seen have needed a referral into secondary care, in the main because for most children it is refractive correction or support for cerebral vision impairment that can be practically managed through the schools service.

Some eye health data from work with adults with learning disabilities is given below:

In one pilot promoting sight tests with adults with learning disabilities, 30% of all patients were referred on to their GP or Hospital Eye Service for an eye health or other health issue and 33% of all patients had a new eye health issue identified. Overall in that patient group 52% of people had an eye health issue.

In 2019 data from a pathway being implemented in the London Borough of Sutton found of 391 patients seen, 154 eye conditions were present (either already identified or newly diagnosed). This shows the heterogeneity and prevalence of sight conditions – 12% of the caseload had cataracts, for example.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

I would like to see greater restrictions on the sale and fitting of glasses to people with learning disabilities and for people in a domiciliary setting so these can only be provided by registrants, in the same way as for children under 16 and those registered visually impaired. This was an agreed position statement by the Vision UK learning disability committee in 2018 and was based on both data and evidence that the vast majority of people with learning disabilities will need glasses – 6 in 10 adults and in our work in special schools over 4 in 10 of children.

The committee took on board anecdotal reports from people with learning disabilities and professional bodies of poorly fitting glasses or adherence to glasses wear. The expertise of an optometrist and in particular a dispensing optician is needed to help establish if there are adaptations or styles of glasses that can support individuals, and provide any follow up advice or support.

While I recognise that there may be some commentary that this restricts patient choice, this is not an issue that people with learning disabilities or parent/carers have raised with SeeAbility, conversely many report that they would appreciate more professional support and advice.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantage to the patient would be that a registered professional fits the appliance and this would hopefully act as some barrier to overselling, not a great one but at least some as professional integrity is assumed. It would be interest to compare the GOC own data in its recent work force survey that found 29% of registrants felt pressure to meet commercial targets at the expense of patient care with a similar survey of sales staff.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Again referring to the GOC own work showing a significant commercial pressure this is likely to get worse once professional responsibility is removed.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See answer to 26

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

A literature review should define evidence based guidelines which can then be agreed by the professional bodies. This would be a clinically lead set of guidelines defined by clinicals and researchers which would not be possible with deregulation.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Not my area but a zero powered contact lense is still a contact lens so I would be lead by clinical experts in this field that suggest professional fitting.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

No professional fitting and care.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The definition of sportswear would be flexible. If its an optical appliance its an optical appliance and so should be regulated unless there is evidence to suggest patient benefit.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

People with learning disability and domiciliary setting should be fitted by a registrant.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I work with low vision patients and people with learning disabilities and I have seen the use of telemedicine during the lock down be almost totally inaccessible to these groups with very little options offered. .

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

In the the GOC does not enforce the rules even as they stand.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Other - please specify

If 'other', please specify.:

A non-UK based business entity specialised in teleophthalmology

4 Are you responding on behalf of an organisation?

Yes

Name of organisation:

[redacted]

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I am a consultant ophthalmologist working on implementing and improving digital ("virtual") clinics in [redacted] Eye Hospital, [redacted] UK. I have more than two years of experience in serving NHS patients remotely. Likewise, I have been part of a few audits on patients' satisfaction and other virtual clinics related issues. Then, I established a non-UK but EU-based business company specializing in teleophthalmology. I have experience in the above topic and may share my opinion regarding the questions on providing remote care via non-UK-based companies. I believe there are pros and cons which should be considered.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I based my answer on my personal experience, internal [redacted] audits, and published manuscripts.

Some of the examples of published articles:

Hanumunthadu D, Adan K, Tinkler K, Balaskas K, Hamilton R, Nicholson L. Outcomes following implementation of a high-volume medical retina virtual clinic utilizing a diagnostic hub during COVID-19. Eye. 2022 Mar;36(3):627-33.

Kortuem K, Fasler K, Charnley A, Khambati H, Fasolo S, Katz M, Balaskas K, Rajendram R, Hamilton R, Keane PA, Sim DA. Implementation of medical retina virtual clinics in a tertiary eye care referral centre. British Journal of Ophthalmology. 2018 Oct 1;102(10):1391-5.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I am not aware of any regulatory barriers.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

I consider that both opticians and providers of remote care must satisfy GOC and GMC's good clinical practice criteria. Basically, everything that is mandatory to provide face-to-face service should be followed in remote work. That would be the best way to provide the best safety for patients.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

In addition to mentioned above, I consider that remote support provider should held a valid insurance and that all information should be kept protected using only software registered and approved in the UK.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

NA

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Testing of sight/eye examinations/prescription of optical appliances/provision of contact lenses

Dispensing to restricted groups which should be expanded to include vulnerable adults in their own/care homes

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Eye examinations

Dispensing to restricted groups including vulnerable adults in care/domiciliary settings

Supply of contact lenses

decision to substitute contact lens material or design-we are seeing research by Efron/Morgan et al regarding the potential risks posed by unregulated substitution.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Substitution of contact lens material. Current situation makes a mockery of the Act

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

As our roles evolves this will be a moving feast. legislation needs to give GOC the elbow room to evolve legislation in response to changign societal and technological forces

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

Business reguation needs to be completely updated. the regualtion of title is anchronistic GOC needs jurisdiction over all regualted ACTIVITY not tiles.

As a former registratnt director of a business the requirement for a maojority of registrant directors, though well intentioned, is not fit for purpose-a registratnt could be defined a director without being party to key strategic decison in a business.

I wonder if a system like pharamcy where ana ccountable registrant is identified witht he power to intervene if they are unhappy with business processes. We should at least consult with GPhC for +ve/-ve in their system

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

Too many practices can obfuscate their resposibilities by not beign registred body corporates. My expereicne with the OCCS is very frustrating in this regard as soem businesses use protected titles but don't abide by GOC standards and systems. This misleads the public and erodes confidence in the profession IMHO .

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

worht discussion with GPhC about how this works for them

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

and ensure ALL business carrying out ANY restricted function must be regulated/under jurisdiction of the regulator. this is key to public confidence in the profession

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes - under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

Technology will enable increased delegation of refraction and elements of the eye examination but the point accountability for a prescription should rest with an optometrist

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

could be the thin edge of a wedge to split refraction from eye health which i feel risks eye health for consumers.

We have no evidence that patients are unable to access eye examinations or that costs of the examination are prohibitive. Again [redacted] has very little case work relation to cost of an eye exam. these two factors would be the catalyst for change but they are not yet there.

We may need flexibility in this area as demographic pull of increased eye health issues /increased prevalence of myopia globally combined with an emerging ophthalmology manpower pinchpoint will pull optoms into increasingly health related activity whereby the need for DOs to refract and fill that void may emerge but we are not there yet.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Old 1989 Act is just so badly worded now it needs a re think and re write

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

We dont have a public health access to eyecare issue (as dentistry often reports) so not sure anything too detrimental in status quo. Not sure any scope for much cost benefit for consumers as cant see costs coming down significantly

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Current situation where a consumer can go to the internet with no prescription order lenses randomly a potentially wear them to drive makes a mockery of the Act. BMG Research 2016 is clear on the potential for this kind of behaviour and Generation Y and Z may be increasingly minded to follow such a libertarian approach.

Regs were drafted when most CI material were to same and the differences were the parameters of the lenses/size/base curve etc. Now the only real variable is the material itself and the decision to 'replicate' is completely different.

a 6 foot steel pole being replaced by a 6 foot aluminium pole is not a meaningful substitution. the dimensions may be the same but the performance will be different.

Substitution IMHO should only be safely enacted when either

a) the manufacturer of the originally prescribed material issues evidence based guidance that it is safe to move from a prescribed product A to a proven substitute B. This would facilitate product development and uptake by the public.

b) A registered ECP who takes accountability for the eye health of the patient having examined their eyes initiates substitution from A to B

The current reality of online substitution makes the Act meaningless.

See latest research from Efron/Morgan et al for the emerging consensus globally on the risks of substitution

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Changes as I have outlined may remove some low cost obsolete lens materials from the sector but I believe that is small price for better eye health of new modern materials

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Children

Adults in Domiciliary settings who may have restricted choice should also be better protected

I also think the limit for the sale of ready readers should be limited to +250/+2.75. Anything above this is probably correctign latent hypermetropia in addition to presbyopia.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Domiciliary

added clear protection to redress when concerns arise. I believe this will reduce risk of exploitation and over selling to vulnerable groups. [redacted] can share case studies as evidence in this regard.

people wearing ready readers of £D and above will have to get their specs prescribed. Increase cost but the right thing for their eyes IMHO

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

See previous answers

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not Answered

Please give your reasons and provide any evidence to support these.:

Change could improve protection

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

probably anachronistic now

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

law comes into alignment with current reality I suspect

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

with the development of better lens materials there is a risk of wearers being false about health risks of putting plastic onto to most sensitive and one of most physiologically complex structures in the body.

A period of aftercare-probably maximum bi yearly to check the eye health would be wise

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Yes if it is relaxed any

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Online & also some unwittingly wrong supply of cosmetic lenses is not insignificant

Physiological risk at lens /cornea interface is no less whether the lens has a refractive power or not

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It does provide level for public protection we just need better enforcement of transgressions

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

N/A

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Bespoke products

risk of harm if incorrect

as Myopia management evolves we need registrant control of the process

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

Reasonable brak point that also stops people evadign routine eye health checks

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Risk that patients disconnect from routine eye health checks with subsequent risk of eye disease

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Encourages regualr eye ehealth cheacks to reduce risk of eye disease

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

restriction of ready mades to +250 or +2.75 power
anything above this is likely correcting some degree of latent hypermetropia

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Small group fo ready made wearers would need to have specs prescribed increase cost but better for their eyes

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Development or AI for OCT could enable new ways of analysing images

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

potential to be more accessible

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

simply the fact that the legislation is historical and doesn't accommodate new tech of this type

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

hamstrung by Act written before such technology existed. We need complete rethink

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Need flexible legislation to move with the evolution of technology

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

with modern tech there is no reason that online supply couldn't be subject to ensuring key dispensing measurements are taken and recorded by the provider to ensure fit for purpose-esp modern PAL design that is so contingent on accurate dispensing

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Tricky as not sure how UK regulator regulates supply from non-UK territory-need international trade legal expertise here

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Sight testing

Fitting prescription contact lenses

Supplying low vision aids to under 16s

Dispensing complex prescriptions to under 16s

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Same as above

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should not be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Interpreting OCT and referral refinement to reduce unnecessary referrals into secondary care. These add to an already overstretched service and can cause unnecessary anxiety to patients.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Who takes responsibility for non tol?

What happens in cases of poor vision due to refraction when there is other pathology, eg cataract?

If same individual is refracting and doing health check can be more confident of the full picture

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

When patients genuinely need a new refraction but are restricted due to GOS rules/confusion

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Same individual takes full responsibility of patient.
Is more time consuming but better to be thorough.
Can identify issues of non tol easily.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Doesn't devalue possible sight threatening complications with contact lenses
Can charge accordingly as they are seen as a medical device rather than cosmetic

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Under 16s
Registered visually impaired
Vulnerable patients, eg those lacking capacity

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Ensures these patients receive proper care

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Make supply easier as sometimes difficult to verify

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Power or not, they can cause sight threatening complications

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Safer for patients

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Who would do their ocular health checks?

Who would be responsible if their vision had deteriorated after 2 years and they made a purchase they were happy with?

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Ensures timely ocular health checks.

Ensures vision is optimum for patients.

Gives opportunity to talk to those who have fallen below visual driving standard without them realising.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Will it provide adequate safety?

May be more costly to patient

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

refraction, cl fitting, internal and external examination, dispensing,

7 What activities do you think must be restricted to our registrants?

Please provide details.:

interpreting results from any 'pre-screen', issuing prescriptions, deciding on referrals, cl fitting and aftercare, internal and external eye exam, assessment on muscle balance, specs dispensing

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

see q7

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

making sure skills not used daily are skill up to date, eg, contact tomonetry

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

There are many times when a refraction is modified for the px needs.

For example, px with amblyopia some prefer a balance lens, some full rx and some modified.

What would happen if reduced VA was found?

Sometimes large refraction change is due to pathology - macula odema, which h=can therefore be missed in fundus exam not done

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

None to the patient willput eye healthy at risk. Due to reduced eye testing durng Covis pandemic i have seen

1. px with advanced cataracts not noticing their vision has reduced to below driving standards

2. Wet Amd left untreated

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

There should be a GOS MECS type option for examination

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Without proper advice and guidance,, there is more risk.. overwearing, not cleaning, wearing when swimming, and tight fitting - all which can lead to irreversible damage

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

No

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

No

Please give your reasons and provide any evidence to support these.:

zero powered lenses should have the same rules of supply as other contact lenses

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

There should be limits on the prescription, as many people guess there PD and can have problems with prismatic effects. For the same reasons bifocal and varifocal lenses that need very accurate measurements should not be allowed.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

relating to above issues

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

We need more control on standards for existing refraction standards. While there may be very competent dispensing opticians, it is problematic to remove the refraction element from the sight test. There is a risk that patients will attend for the sole purpose of refraction for new specs and miss out on the health care benefits of full examination.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Examination, refraction, prescribing spectacles, clinically necessary tests.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction, examination, clinically necessary tests.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Clinically necessary or indicated tests.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

Too many loopholes for the supply of contact lenses. I have encountered patients with problems arising from unregulated and inappropriate supply of lenses.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

No

Please give your reasons and provide any evidence to support these.:

Better control for patient safety.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

It currently has NO power to police the existing regulations.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

There are some very competent dos who could do better than optoms.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Better patient care.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

Too many unnecessary come from inexperienced, insecure, unsure optometrists from [redacted] .

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It would be better if the existing regulations were applied effectively.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

All categories of patients should have an adequate level of professional oversight.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Better patient care.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It is not well policed at present. Further watering down will reduce payiecar3.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Are the lenses causing adverse results on the cornea.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Danger from poor cl hygiene

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Poor control at present. Relaxing standards worse.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Poor patient care, missed pathology, blindness

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None as long as it is appropriate

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Not policed.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Sight tests contact lens fittings

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Sight test - whole

Cls checks/fit

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Not sure / no opinion

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Refraction is one of the most important aspects of being an optom and tells us SO much about the eye health.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Currently : no disadvantages from the optom pov. From the employers pov, more time with px so less money
Advantages: keep optoms doing the whole ST so they get full overview of eye health

If things were to change:

Disadvantages: further degradation of the profession

Advantage: multiples will push for more and more and will get more and more money. At what cost?

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It should stay the same

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

[redacted]

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

None registrants should be restricted from testing of sight, supply/ fitting of contact lenses, and dispensing of spectacles to children, vulnerable adults and hospital prescriptions

7 What activities do you think must be restricted to our registrants?

Please provide details.:

unless further certification is obtained, glaucoma referral refinement & monitoring, extended prescribing of some drugs, MECS schemes, AMD monitoring.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Supply of spectacles to adults with learning difficulties

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

MECS, Glaucoma and AMD Specialisations

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Separating the sight testing from health examination could result in missed pathology

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Dangers associated with missed pathology. There is often a connection between the testing of sight and detection of pathology

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

advantages are continuing high standard of care for the patient

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Anecdotally 5% and rising with an increasingly ageing population

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Plenty of anecdotal evidence for refraction results pointing to pathology concerns, which are then further confirmed by eye health checks

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Current arrangements are as safe as they can be, although it is possible for patients to purchase lenses from a foreign supplier over the internet without a certified prescription that is up to date

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Adults with learning difficulties

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantages would be that the supply to this group, who are often more challenging, would be safer and more matched to the patient's needs, given the extra training and experience that a professional has. Very much the same as would be the case for children's supply

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Less supervision by a professional could mean an increase in pathological events

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

disadvantages would be a risk of inappropriate lenses being supplied, risking patient safety

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

there should be the same legislation for plano lenses as the risks are the same as for powered lenses

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

If the regulations are relaxed, there is a raised potential for patient harm caused by insufficient checking

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

safety for the patient would be maintained

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

It is reasonable, and indeed a recommendation that adults have 2 yearly examination to both verify the prescription and check the health of the eyes

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Incorrect prescriptions being issued and pathology being missed

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Safety of the patient being maintained

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Children require a professional input into the supply of any optical appliance as their vision is still developing, and they often have more specialised needs

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

inappropriate appliances being supplied, resulting in potential damage to the child, possibly permanently

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

maintaining safety for the child both in the short and long term

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

continuing safety and care of the patient

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

electronic referral of patients to other professionals is more effective, especially if accompanied by imaging (photos/OCT images).

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Dispensing without supervision of a dispensing optician. Reduced errors in practice.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Holding prescriptions in the opticians

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should not be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

N/a

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Refresher courses

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – with no restrictions

Please give your reasons and provide any evidence to support these.:

Dispensing opticians in other parts of the world including parts of the EU allow dispensing opticians to refract. This takes responsibility of the optometrist who can focus solely on pathology and minor eye conditions instead.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Advantages

- equality

- As the dispensing opticians do the dispensing, its easier for them to deal with problems straight way and have to wait for an optometrist

- if dispensing opticians can refract, then optometrist can focus on minor eye conditions.

Disadvantages

- further training dispensing opticians will be required

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As above

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Na

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Patients with prisms at any age

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantages

- less dispensing errors

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

No

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

29 Do you think the Act should specify a definition of aftercare?

No

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

No

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

No

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Na

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

No

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Yes

Please give your reasons and provide any evidence to support these.:

If a auto refractor check can be done before dispensing that would help the judgement to use older than 2 year prescriptions

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Technology allow for mroe accurate diagnosis

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Na

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Na

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment,

pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Sight testing/refraction

7 What activities do you think must be restricted to our registrants?

Please provide details.:

The complete eye test as it currently stands today.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

To enable a complete/thorough refraction, the full picture/understanding of the px's ocular health is required, in my opinion. The effect of pathology such as cataract or keratoconus would have on a refraction and expected va's and I feel only an optometrist would only be equipped and able to take all these factors into consideration and give the best care/outcome for the patient. The refraction should NOT be delegated.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Numerous rechecks, overplus, over minus, amblyopic eye given to much Rx leading to binocular issues, diplopia, dangerous drivers, accidents, extreme detriment to px's health. Mismanaging of prisms.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No disadvantages

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Keeping it as it is would be the safest option for the patient.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

Possibly to people with certain disabilities, dementia, reduced mobility.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Wrong contact lenses could and would be dispensed without complete verification of a contact lens specification.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Silly question!!

A lot can change in 2 years. Undetected pathology, refraction, va's, eligibility for driving.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Read the above

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

They should not be allowed to supply optical devices or use any professional term that the public could confuse as a qualified person or organisation

7 What activities do you think must be restricted to our registrants?

Please provide details.:

They must work within their scope of practice, but we should keep trying to expand our services, from therapeutics, Glaucoma treatment, including SLT, corrective laser treatment, YAG laser capsulotomy, wet and dry AMD management etc

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

The selling of Optical appliances by non registered online companies

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

See answer above to Question 7

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

It's makes the professional "unprofessional " and clinically demoralised that someone can purchase glasses elsewhere from the practice and business they are tested at.It seems, particularly for an Independent practice, that we are having our livelihoods taken away from us to serve the needs of large commercial Optical companies, either online or on the High Street, where the bottom line is making money and pleasing shareholders.How can we take on extra eye health roles if our revenue goes elsewhere. I don't take my dog to the vet for a checkup and then go elsewhere for treatment .

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

No

Please give your reasons and provide any evidence to support these.:

See above answer for Q 11

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

Practices are already successfully inspected by local Health Boards

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

It is essential that who does the refraction has a fundamental understanding at degree level of all factors that can influence visual performance, otherwise pathology will be missed.

Without a knowledge of pathology , refraction is a risk to the public.There are many pathological factors that can affect refractive outcome, not just optical changes.i.e diabetic macula oedema, intra ocular tumour, retinal tear/ detachment, optic neuropathy, corneal dystrophy, to name but a few.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

See answer to Q 15,

ALSO

The only people who gains from DO's refracting are the large chains who will employ cheaper sight testers to improve their margins. Not every small community independent practice will be able to buy all the most up to date equipment ([redacted] . automated refraction, OCT etc) as proposed by [redacted] as a means to allow someone else to refract. Will there be grants available to allow us to update equipment?

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

See answers to Q15 and 16

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See answers to Q15 16 and 17

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

I am an IP Optometrist, so I refer less patients than I used to.
Most are for cataract surgery, which are about 1 a week (I work 2 days a week)

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

No; but having worked as an Optometrist for 31 years, 11 as an IP Optometrist, I am aware of the potentially serious pitfalls for separation. Also, who is ultimately responsible if pathology is missed?

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

You wouldn't have a pacemaker fitted by someone not qualified, so why would you allow anyone to fit a medical device on your eye?

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

What would be the point in spending huge resources being trained to fit and CL's , and ongoing A/C, if any non qualified person could do it.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Learning disabilities, Alzheimers, Dementia, severely sight impaired.

How would another supplier know the patient's medical background and discussion on limitations on what the patient can see with the appliance, as well as positioning and lighting levels.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No disadvantages for reasons stated

Advantages to qualified person is that effectively they are being paid (by staying with the original sight tester and organisation) for the extra time involved discussing with the patient and their carer the limitations and optimum requirements to use the appliance.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

See previous answers

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

It is a medical device, therefore the patient should remain under the care of the CL fitter for their protection should future infection or change in eye health occur.

Refer also to answer and reasons given earlier regarding the sale and supply of glasses should be by the prescriber .

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

Non registrants should not be allowed to sell and supply glasses.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As stated above, non registrants should fundamentally not be allowed to sell and supply glasses.

If we want Optometry to evolve, unless there is another way of funding ourselves , we are giving away effectively part of our livelihood to anybody.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See my overall comments for the previous 2 questions

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As stated in previous answers, we are throwing our livelihood away if this is not restricted to the prescribing practice

Why waste 4 years gaining a degree; then another year as a pre-reg, sit further exams, go on to do post grad qualifications, when the main source of my income can be taken by anybody not qualified, setting up in business to sell and supply optical appliances for any age group.

Children's vision develops at different rates .The prescriber is in a unique position to monitor this; as well as growth, rx change; myopia management,adjustments to appliance size, CL fitting and aftercar

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See previous answers

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Telephone consultations including patients sending images of a red eye to secure NHS email address for remote assessment

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

We were an emergency eyecare centre during the pandemic. We used telephone and online consultations successfully.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Online sales should only be done as an additional part of appliance selling from the prescribing practice, not by an unqualified third party, for reasons stated in previous answers- mainly lost of livelihood and making a mockery of spending years gaining qualifications.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

See above

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

See above answers concerning patients taking prescriptions elsewhere , including online portals by non qualified .

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

See previous answers

Further information

56 Can we publish your response?

Yes

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Any activity that could be interpreted as the testing of sight with the intent of supplying an optical appliance.
Dispensing activities should be supervised by a registrant according to experience and knowledge gained.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Dispensing to children and vulnerable adults and those sight impaired and severely sight impaired (whether registered or not).

Any activity that requires additional qualification ie contact lens work.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

Existing qualifications provide sufficient protection for the public. Too many demarcations can leave the public bewildered.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Even after 64 years of the Opticians Act, with amendments, it is my view that the public is largely unaware of the differences between a Dispensing Optician and an Optometrist. If dispensing opticians were allowed to refract it would create a two-tier system that would be even less understood. Members of the public are not in a position to know whether just a refraction, or a complete sight test is needed for their circumstances. They would probably be swayed by the costs involved. Financial and clinical aspects could become more clouded to the detriment of the public whose safety and protection are paramount.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Answered in 15

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Legislation provides the protection required. I do not see any undue disadvantages or barriers currently.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Current legislation on sight testing provides ample public protection. If a system works with reasonable efficiency why change it?

Registrants aspirations to work in diverse fields (often with enhanced so-called qualifications) can lead to confusion about a professional's abilities and limitations.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

A CL practitioner requires additional knowledge and the health of the eye is more directly implicated in this work.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As before, the current legislation appears fit for purpose.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

Vulnerable groups already protected.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Provides adequate safeguards and protection for public and practitioner.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

Depends how they were changed. No point in relaxing a working system.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

A necessary check/balance.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The possibility of incorrect specifications being given to the patient and the inaccurate subsequent supply of an appliance or of advice on eye health.

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not Answered

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Public not in a position to be able to make proper technical decisions on optical appliances.
Buying ready-made readers to use while driving is an example.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

The time limit directs public towards an eye health check.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

They may purchase incorrect lenses, putting others at risk by wearing a defective and out-of-date prescription. No public protection as the implication is that no new eye examination is necessary.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Plainly it is in the public interest to be wearing the correct prescription.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

If it is felt desirable to offer sportswear optical appliances then the appliance should be accurately fitted by a registrant.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Open to financial inducement, special offers, other advertising ploys without adequate technical support.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Provides sufficient protection and therefore fit for purpose.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

From the public standpoint, differentiating between an un-registered optical assistant/consultant, a trainee dispensing optician and a registrant could be made clearer.

Also, the explanation of the extent and degree of supervision of a trainee dispensing optician and the ability to intervene could be strengthened.

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

Equality, diversity and inclusion

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

7 What activities do you think must be restricted to our registrants?

Please provide details.:

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Supply of spectacle to complex Rx

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Not Answered

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

No, the refraction is more than just a set of numbers, it is indicative of health changes and is entwined with an assessment of eye health. 80% of px's do not want an eye health check, they want a prescription for new glasses. As an optometrist I think that it is my duty to refract and assess eye health as part of an eye examination and the px believes they have the best possible care. What happens if they have a simple refraction with a DO and the result is indicative of a problem, yet they have no follow up. If their vision is below par, should it be investigated there and then? Where is the optometrist in this scenario? Will the px return if they are required to be seen another day for the full ST? I strongly feel that by delegating the refraction there is a Pandora's box that cannot be closed again.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Advantages:

A business can save money by using "cheaper" professionals to complete 30% of the eye exam (very short term).

Disadvantages:

From a business point of view DO's would command a pay rise to be more profitable than it's their skills, would it make sense to pay two people (optom and DO) for one eye exam?

There is a conflict of message to the px, arguments over splitting the eye exam between 2 professionals.

Refraction is a part of a process, not a separate, stage. (How many times have we done a recheck to realise that it wasn't the prescription that was at fault, there was more to it... and as an optometrist I can explore that fully.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

Complex rx.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not Answered

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not Answered

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Surely you can't dissociate the supply of optical appliances to under 16's from the supply of sport optical appliances to under 16's???

If it is eyewear that contains a prescription then it should be regulated. Children cannot always tell you that the vision is not clear/ correct and more damage can be caused by the wrong Rx in that age group... equally as valid in sports eyewear

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not Answered

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not Answered

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

If it is sold in the UK then it must be regulate under the UK opticians act. Companies registered abroad that do not abide by the same rules should be prevented from supplying the Uk.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are they any other gaps in regulation where you think legislative change might be required?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Selling all types of spectacles and contact lenses to all age groups

7 What activities do you think must be restricted to our registrants?

Please provide details.:

None

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

Contact lens Opticians already refract and look at ocular health when fitting contact lenses so why make up courses as they already carry out and have been trained in contact lens procedures. Its inly a money making gimmick.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

As in some business still unregistered staff carrying out registered personnel jobs

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – with no restrictions

Please give your reasons and provide any evidence to support these.:

There is no need to have an Optometrist oversight the refraction as this would still be waisting time and especially contact lens Opticians who do this anyway, Why teach them to suck eggs!!

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

It would stop Optometrists especially locums from over charging Practices and quite a few people only require a refraction not a full eye exam, so let the public choose what they require and what they want to pay for. Stop over inflated Optoms wages.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Its well out if date due to new modern equipment that can do most of the refraction without a human bring and be more accurate

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Holding back the profession, staying in the dark ages.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

My Optometrist refers nearly 50 percent of my Patients due to lack of confidence in her abilities and worried about if she misses something she will be held accountable and face GOC proceedings. Therefore covering herself but causing Patients worry for mainly no reason and causing extensive waiting times in the hospital eye service. I see the results when the hospital write back with the results and 9 out of 10 times Patient fine.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Most of the Public only require new specs and therefore only require an up dated prescription.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Its too lacks as allows anyone to prescribe contacts

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Free for all anyone is allowed

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes - please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Every one should only be fitted by Qualified personal.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There would be no financial problem as let the correct qualified Optical Practice receive the remuneration not on line unqualified receive the money for doing nothing. Perhaps also there would be less RTC s on the roads as public would be wearing correctly fitted spectacles and contact lenses

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Too free

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

No

Please give your reasons and provide any evidence to support these.:

It would improve their protection make them have contact lens checks more regularly and use the correct cls and solutions

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Keep Patients going to a Qualified Optician not buying in line

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Qualified persons only

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Qualified persons only

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Qualified persons only

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Qualified only

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Qualified only

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

Make stricter

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Triage through online advise

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Give the go ahead

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Not allowing this

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Move forward and try it

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

They allow it

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Stop it all together Opticians do Optical things grocery people feed people they don't test eyes. Each to their own.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Too much reliance on NHS when alot of people are Private

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Come away from depending on the NHS for guidance

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

As above

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment,

pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Student dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Providing low vision devices, ready reading spectacles, Rx sports devices, paediatric spectacles or correction, higher-powered spectacles (over +/-8.00)

7 What activities do you think must be restricted to our registrants?

Please provide details.:

All of the above

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

n/a

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes - with no restrictions

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

n/a

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

n/a

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

n/a

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

<16 year old
patients with diminished mental capacity (dementia, autism, post-stroke etc)
high power spectacles
special facial characteristics
low vision/sight impaired

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

na

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

na

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

na

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

na

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

na

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

na

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

na

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

na

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

na

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

na

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

na

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

na

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

na

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

online spectacle and contact lens sale, especially for those under 16 or over +/-5.00

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

online spectacle and contact lens sale, especially for those under 16 or over +/-5.00

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Contact lens optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

test the eye
sales of specs under 16
fitting contact lenses
dealing with venerable ptients

7 What activities do you think must be restricted to our registrants?

Please provide details.:

depend on their qualification
ie a dispensing optician should not perform an eye test or do a contact lens check

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

to improve the clinical performance of optom's
Optometrist will be more clinical than retailers

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I don't think it will impact. I believe it will improve the primary care and help the NHS. Pharmacists are taking courses to prescribe and dental hygienists can do health checks.

So moving optometrists to a more valuable area will help diagnosis.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

From where I work referrals are done daily.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

For the purpose of safety contact lenses need to be regulated.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

For the safety of patients and education.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Children's and children with disability.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Get better personal care by qualified opticians.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

restricting the sales of contact lenses would help the user understanding the benifite of contact lens care

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

to prevent eye problems

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

the impact is to do with eye health, having a contact lens check when the prescription is expired will help the patient informed about the changes and rectify any mis use of lenses

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

for health and safety

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

to make sure the supply of sport rx is correct and the fitting as well

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

health and safety

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

health and safety

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

[redacted] is program that enable to help remote health check

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

all I would like to say tech is getting better and GOC need to look into it with an open eye

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

sales on contact lenses online

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Contact lens optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Selling of contact lenses

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction and contact lens fitting

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

No

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

I was very fortunate to undertake the AOP delegated function course in 1999 at City college London. It was a yearly intensive course one day per week run by [redacted]. It proved very beneficial to us as at that time I was working with 2 optometrists and the smoothness of the practice worked very well and no issues ever arose. I believe the [redacted] still use my course notes to train [redacted] examiners who use the prefix [redacted].

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

As stated above

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

We found it most beneficial until 2013

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Over the years we undertook delegation there were numerous referrals and follow ups

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Should only be fitted by registered personnel

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Again should be fitted by registered personnel

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Allowing unregistered personnel to fit or sell plano lenses is a certain risk to the public

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Many times patients can buy contact lenses over the Internet without a prescription

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

A harder line on Internet sales without prescription

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Selling contact lenses and glasses without a supervising Dispensing Optician or optometrist. All ages.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Selling contact lenses and glasses without a supervising Dispensing Optician or optometrist. All ages.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Optometrists would have more time to focus on the health of the eyes, including processing referrals.

A likely negative is that optometrists may feel unhappy at other professions carrying out tasks that have previously been exclusive to them.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

An ageing population means more demands on optometrists time, so doing nothing now will only increase pressure on optometrists, especially as further training for refraction will take time, so waiting until it's "needed" is a bad idea.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As it is, people can purchase contact lenses online in the UK without a valid prescription and lens fitting. Legislation forbids this, but there is zero apparent enforcement in the field.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

This question doesn't say what those changes could be, so of course there's a risk, for example if zero-powered lenses became sellable without a professional involved, many more people would risk their eyesight.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Many more people will be putting lenses into their eyes that are poorly fitting, the wrong prescription, and will have never been told things such as “don’t use tap water”. It would be a catastrophe.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Minimum standards would be helpful.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

The risks of contact lenses aren’t the prescription, it’s the fact that it’s a physical item being placed on the eye. Differentiating zero-powered lenses is folly, designed to remove work from the GOC and remove safety from the public.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

It is constantly astonishing that there appears to be almost zero enforcement in this field.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The public will continue to be encouraged to speak with professionals that can help them mitigate the risks of contact lens wear.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

We have minimum tolerances for checking prescriptions and measurements for a reason. Telling the general public that they can sell glasses to anyone over 16 is madness when they haven’t had the training to get it right.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients would skip their sight tests, resulting in (a) glasses that are no longer their current prescription and (b) their eye health issues will go unnoticed until it significantly impacts their vision, rather than catching it early enough to do something about it.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

A major advantage is that those with prescriptions get the health of their eye checked every two years. It is a great shame that those without prescriptions are much less likely to get their eyes examined, as issues will go unnoticed.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients will get glasses that are made up incorrectly, completely ignorant of the various considerations that are required for dispensing under 16s, including phorias and tropias, the Critical Period, and the implications of various materials.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The public will be less likely to get glasses that are damaging to their refractive health.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

The ability to sell glasses that the owner can change the prescription in (eg, bifocals that are activated by an electric current) should be made legal through dispensing opticians.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Technologies that can help patients are restricted.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Bifocals that can be activated with an electric current.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The restriction on lenses that can have their prescription “changed” by the user.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Unregistered people that sell spectacles should be held accountable for the cost of further sight tests if their product does not meet the patients needs. They took their money, they should be on the hook for fixing problems, just like registered professionals are when they make up glasses to an outside rx.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Make it a specific clause that anyone selling optical appliances is liable for the future costs associated with the product they sold, such as paying for a private refraction if they aren't able to carry it out themselves.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Anything related to eye examinations, without direct supervision of a registered Optometrist.

No involvement in the dispensing of spectacles, visual aids or contact lenses. Any advising on; spectacle frame choice or fitting of finished spectacles or handing over of optical goods (e.g. Contact lenses, solutions or visual aids), must be done with direct supervision of a DO, CLO or Optometrist.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Eye examination, contact lens fitting and supply, dispensing of spectacles and visual aids.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

LVA supply and any dispensing of spectacles other than basic single vision to over 18s.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

To be able to modify a Rx in cases of intolerance or check an Rx from elsewhere before making up spectacles. This though should only be in cases of no underlying conditions existing, e.g. AMD and retinal detachment.

This should leave Optometrist chair time for full EEs and more clinical needs.

Unsure of any direct evidence of this in actual practice.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Disadvantages;

Eye conditions missed

Liability for Rx resting with Optom or DO

Advantages;

Reduction in wasted Optom chair time

DO having better idea of client's needs
Better equality of status between DO, CLO and Optom

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Protects clients from entrusting their eye health to unqualified practitioners.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage

Continued professional barriers between Optoms amd DOs
Wasted chair time
Reduction in intolerance cases

Advantage

The status quo works

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Contact lens compliance needs correct management by a fully qualified and registered professional to protect long-term eye health.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I can think of no disadvantages, if anything it should be further enhanced to restrict online suppliers.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/A

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Depends on changes!

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Any reduction in verification could lead to client welfare problems.

29 Do you think the Act should specify a definition of aftercare?

No

If yes, please specify what you think the definition of aftercare should be.:

Gold standard aftercare methods should be in place, but left to professional interpretation.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Any c/lens should still be considered as a medical device and regulated accordingly.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

See above

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Only an advantage

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

N/A

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage

Clinical conditions missed
Changes in Rx missed
No check on legality to drive
Reduction in Optom employment

Advantages

Convenience for client if happy with Rx
Less unnecessary EEs showing stable Rxs

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Status quo works.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Incorrect advice could lead to poor fitting and sight threatening eye protection.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

N/A

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

N/A

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

- testing sight
- fitting contact lenses
- selling optical appliances to children under 16, including sports eyewear
- selling optical appliances to people registered as visually impaired
- selling zero-powered contact lenses
- dispensing optical appliances to patient groups that can be described as vulnerable, such as people with learning disabilities or dementia, recognising that this requires enhanced skills and knowledge, including:
 - highly-developed communication skills,
 - expert dispensing skills, taking into account factors such as facial characteristics and posture
 - an understanding medical conditions, such as dementia, and the impact they can have on vision and a patient's behaviour
 - an ability to judge the decision-making capacity of a patient
- giving advice on and treatment for myopia management, including through the fitting and supply of spectacles and contact lenses, recognising that treatment for myopia management:
 - is long-term and potentially expensive
 - has the potential to reduce the risk of eye disease later in life, as well as slowing the development of myopia may be of value to patients who are over 16, as well as to children.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

- testing sight
- fitting contact lenses
- selling optical appliances to children under 16, including sports eyewear
- selling optical appliances to people registered as visually impaired
- selling zero-powered contact lenses

- dispensing optical appliances to patient groups that can be described as vulnerable, such as people with learning disabilities or dementia
- giving advice on and treatment for myopia management, including through the fitting and supply of spectacles and contact lenses

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

- dispensing optical appliances to patient groups that can be described as vulnerable, such as people with learning disabilities or dementia, recognising that this requires enhanced skills and knowledge, including:
 - highly-developed communication skills,
 - expert dispensing skills, taking into account factors such as facial characteristics and posture
 - an understanding medical conditions, such as dementia, and the impact they can have on vision and a patient's behaviour
 - an ability to judge the decision-making capacity of a patient
- giving advice on and treatment for myopia management, including through the fitting and supply of spectacles and contact lenses, recognising that treatment for myopia management:
 - is long-term and potentially expensive
 - has the potential to reduce the risk of eye disease later in life, as well as slowing the development of myopia may be of value to patients who are over 16, as well as to children.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not Answered

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

To support the optometrist in practice and allow them to concentrate on the inner eye health of the patient.

the full exam will be done in tandem so no risk to the patient of missed pathology

The DO is best placed to perform the refraction bearing in mind the visual task analysis required in order to properly serve the visual needs of the patient in their work, hobbies and lifestyle.

DO's refract (and prescribe) in many other countries of the world with no issues reported whatsoever. It would be a small extension of their scope of practice since the Refractive Management unit currently covers the entire refraction routine as a 'knows how'

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

see above

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Yes, the sale and supply of optical appliances to certain groups of vulnerable patients should be further restricted so that it must be carried out by a registrant. Such patient groups should include people with learning disabilities or dementia because dispensing optical appliances to such patients requires enhanced skills and knowledge.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Dispensing optical appliances to people with learning disabilities or dementia requires enhanced skills and knowledge, including:

- highly-developed communication skills,
- expert dispensing skills, taking into account factors such as facial characteristics and posture
- an understanding medical conditions, such as dementia, and the impact they can have on vision and a patient's behaviour
- an ability to judge the decision-making capacity of a patient
- understanding of medical conditions

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not Answered

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Not Answered

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not Answered

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not Answered

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not Answered

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Not Answered

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

These restrictions are necessary to protect the public and should be maintained. We do not agree that the fitting process for such sportswear is 'not as complex' as for spectacles or contact lenses. Sports eyewear is fitted not only to ensure optimum vision but to afford protection to the wearer. Therefore, it is more rather than less complex to fit, requiring detailed questioning about usage and enhanced dispensing skills to ensure a safe, optimum fit. The call for evidence also suggests that the restrictions might be unnecessary because sportswear is 'usually only worn for short periods'. While diving masks, swimming goggles or sport goggles can be worn for short periods, they can also be worn over an extended length of time. In any case, if such optical appliances have not been fitted correctly and/or appropriate advice has not been given, there is clearly an increased risk of harm if a child is unable to see clearly under water or is wearing a poorly fitting pair of rugby goggles. This could also result in harm to team members or competitors.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not Answered

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Business registrant/employer

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Diagnosing eye disease
issuing spectacle prescriptions
issuing contact lens prescriptions

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Activities should not be restricted. Anyone charging money for services should be suitably trained and competent but any restriction should not inhibit a practice team approach to eyecare.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Dispensing of spectacles to;
Vulnerable adults
Drivers - of any vehicle, HGV, trains, Taxi's etc
Train drivers
Anyone with Rx over +/- 5.00D
Safety eyewear
Bifocals
PPL's
Monocular patients
People with visual acuities lower than 6/12
People with facial disfigurements

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Refraction - should be supported to train other team members, registered and unregistered to do subjective refraction. Optometrists are doing more and more and a hurried subjective refraction is easily inaccurate, let other team members with more time and less pressure support them by taking this tedious function away from the sole supplier.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

Extending regulation of spectacle supply to more restricted groups would better protect the public, HGV drivers wearing specs bought online and unchecked quite honestly makes me wonder if anyone ever thought about the worst case scenario.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes - with no restrictions

Please give your reasons and provide any evidence to support these.:

Refraction is time consuming and in an area where more and more is asked of optometrists let the professions support each other, this is an easy learned skillset that DO's and OA's are well placed to help out with.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

It supports the optometrist and gives them more time to deliver other services.

Saves expensive chair time especially in the event of a re test.

If a patient presents with a prescription that turns out to have been done in a hurry and is inaccurate it would allow a dispensing optician to deliver a retest and change the prescription without going back to original optometrist thus saving the patient time and embarrassment.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Allowing other team members to be involved with sight testing is already evident, OA's do visual field tests, none contact tonometry, auto refraction, etc etc. The analysis of the results is still left with the optometrist, I don't see why any part of the process cannot be done by the team to feed into the optom.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

We currently don't have enough optometrists, the ones we have want to further their scope of practice and get involved in more advanced techniques so there is a skills gap which could be easily filled without endangering any member of the public

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

I do not support the separation of the eye examination and the refraction, I just think refraction could be done for the optometrist same as fields, pressures, OCT and fundus photo's.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantage would be maintaining the status quo but the fact that overseas supply is unregulated and unregulatable the legislation only impacts UK based business and leaves them vulnerable to predatory overseas suppliers.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Drivers - safety
Vulnerable adults - avoid exploitation
Safety eyewear - need to be correctly fitted to work
Any prescription over +/-5.00D as Rx may need to be compensated for back vertex distance
Those with Downs syndrome - special fitting characteristics
PPL's - badly fitted can be dangerous - falls risk
Bifocals- badly fitted can be dangerous - falls risk
Monocular patients - they only have one eye, need to look after it
Pilots - need to see well
Over 70's - need visual task analysis and consideration of other morbidities
Low VA's - under 6/12 need good patient management

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

All operators of people transport, planes, trains automobiles and HGV's all pose massive threat to public, if they are not optimally corrected there could be collision risk.

Multifocal lenses need to be correctly fitted to mitigate risk of falls. Any Rx over +/- 5.00D needs to have a VD stated according to british standards because the VD could impact on the effective power of the lens at the cornea and may need to be compensated accordingly - you need to be trained to take those critical measurements and how to do subsequent calculation.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

The oversea supply cannot be regulated and this causes confusion with our patients and stops true regulation

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

If we deregulate the supply of contact lenses they will be bought in supermarkets without any appropriate fitting or ongoing health complications being monitored.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

The mass production of contact lenses and massive supply means lenses cannot be individually verified so much verification is left to the manufacturers and registrants check what is written on the packet not whats inside.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

In truth each lens is not verified so very little impact

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

We see horror stories every haloween of people buying gimmick contact lenses without supervision and things going wrong

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

In theory this means all lenses are supplied by someone who understands the risks and knows what to look for when things go wrong

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Making registrants take responsibility for the health of someone's eye if you sell them a pair of ready readers means that this market is given to the supermarkets etc. I think this is unfair and draconian.

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

As far as I can see the biggest risk is they may get the chance to talk to an optician and learn about the benefits of having an eye exam and buying specs prescribed to them rather than guessing.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Contact lenses - as above

Some consumer groups as I mentioned above would be better served by legislation protecting them.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

A registrant can better judge what is in the patients best interest and behave accordingly so long as they can justify their action, a non-registrant unbound by a professional code of practice may err on the side of profiteering!

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

They may waste their money. Un detected pathology may go undetected even longer.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

People are restricted in such a way that is in their best interest and a qualified registrant can make the decision to do other if such an action can be justified and it is documented accordingly.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Financial benefit would be present because without having to fund a professional salary the retail price could be reduced. Appliances may not be fitted correctly or prescription may be mounted incorrectly and lead to developmental problems.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Children in their formative years need eyewear to be well fitted and appropriately supplied for intended purpose

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I don't think there are any

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Tele optometry is going to be a thing, there is little you can do to stop it and it will be delivered from abroad and thus not impacted by GOC regulation.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes - a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

It's not as holistic as face to face and those on the side lines may slip through the net. By the same token it has been demonstrated that learning machines can perform visual screening etc better than humans without growing tired, needing to be paid, taking breaks or limited working hours.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Currently remote care is not endorsed and all care delivered is by registrants with qualifications.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Not being able to regulate overseas remote delivery will allow this to progress

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Enforce the existing rules and block or close down those that seek to ignore our regulations

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Allowing the supply of "Equivalent" contact lenses is not acceptable

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

prosecution

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The freedom to take your prescription elsewhere to buy specs is a minefield, if people who sold specs could refract the patient again a lot of heartache could be avoided - of course this would also mean the supplier could use their own prescription to give to the patient

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

prevented from Sight testing

Dispensing in accordance with currently restricted categories, but also including those who are vulnerable such as learning disabilities, cognitive impairment including dementia and facial deformities or limb disabilities that make spectacle wear difficult.

Dispense children who are susceptible to myopia and may benefit from myopia management.

Should not be able to sell contact lenses of any power without a GOC registered person providing supervision on the premises.

Unable to sell ready readers of any power without being able to offer appropriate advice and guidance on their use.

Online sales of prescription spectacles

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Sight testing

Dispensing and the sale of optical appliances to currently restricted categories and include those who are vulnerable and individuals who have facial characteristics that require consideration for frame fitting and myopia management for children.

Contact lens provision and fitting including zero powered lenses.

Online sale of prescription spectacles.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Dispensing optical appliances to vulnerable patients, such as people with learning disabilities or dementia or who require additional considerations due to facial anatomy or disability.

Myopia management, including fitting and supplying spectacles and contact lenses.

Sale of zero powered contact lenses.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

This role should not be given to Dispensing Opticians, it is not a good use of their skills nor does it provide value to patients or Optical practices.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

In my opinion the only advantage is towards corporate optical chains to reduce their costs.

It is a disadvantage to ALL patients and all professional staff for Dispensing Opticians to provide refraction.

There is no advantage to an independent optical business and I see no advantage to an Dispensing Optician to provide a refraction, surely it allows for new pathology to go undiagnosed and missed.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Children under 16 including those who would benefit from myopia management.

Patients with a complex prescription and those who are registered as sight impaired or severely sight impaired.

ALL vulnerable patients, learning disabilities, physical disabilities, dementia and cognitive disabilities, and unusual facial characteristics.

All contact lenses including zero powered.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Providing the most up-to-date and relevant care to those groups of patients that require professional services.

Communication skills and understanding the pathological impacts of their health and having a much broader knowledge and understanding of how their health impacts their vision or cognitive processes.

Children and parents may not understand myopia, the long-term effects ocular health risks or the reasons why myopia management is important.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Contact lenses are a medical device and should only be fitted, prescribed and purchased from GOC registered companies or Individuals. This ensures that patients' health is not put at unnecessary harm.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

All contact lenses sold should be checked against an in date sighttest and contact lens specification that is signed by the Optometrist who prescribed.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Open market free for all and ultimately patient health is put at risk.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Contact lenses of any power should only be fitted by GOC registered individuals. This reduces risk of harm to patients. Patients should not be able to buy zero powered lenses without a copy of a contact lens specification that is in date and signed by an Optometrist.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Yes, to reduce harm to patients.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This age group is restricted, so ALL optical devices for this age group should also be restricted. There should be NO grey area as this causes loop holes.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

Bring back restrictions on the sale of ready readers.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Stops individuals wearing them for driving or wearing full time in place of prescribed optical appliances.
This is for the health and safety of all patients and individuals.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Online sales should only be allowed by registered GOC companies or individuals, this reduces risk to patients in purchasing a product that does not meet their needs, falls below standards or not fit for purpose as inaccurately measured.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Yes, close them down and only allow GOC registered companies and individuals to provide this service.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Sight testing and aftercares

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Sale and supply of under 16 / visually impaired
Sight test and contact lens fittings and aftercares

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

N/a

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

There is a high risk of missed pathology and severe consequences for a patient
This could range from a tumour to early indicators for glaucoma

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

It would be detrimental for our profession and patients
Many patients we see every week that come for an update of spectacles , once performed the sight test we can pick of pathology and even advise on general health issues
Only recently I spotted an emboli that would have been missed during just a refraction
This patient had a serious of investigations all as an emergency
That is to name one example

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It would seriously undervalue our profession and the hard working optometrist who provide a great service to both private and nhs patients

Splitting the sight test would have financial implications to the patients and further the nhs

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Anterior eye health is just as important as posterior

This can be missed by the unqualified eye

You may see cataracts at an aftercare appointment which patient may believe just needs a stronger powered contact lens

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Yes we can't issue contact lenses without performing necessary checks

There are serious implications for contact lens patients that may not follow compliance or who may have serious eye infections that can risk scarring and hence a loss of vision

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

That would be detrimental

We should be educating our patients on the various contact lenses available and fit and supply what is best for the patient based on our findings and their wearing schedules

Most patients are under the impression that all contacts ie dailies are the same

It is our duty to educate them

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

All contact lenses carry a risk of infection or complications whether it be a high plus or Plano

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

It is a fair regulatory requirement

Many people could have pathology at an earlier stage however we need to draw the line at something and this seems fair for both patients and optometrists

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Missed pathology would be a high risk

Diagnosis of health conditions could also be missed

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

Optometrists should retain the domain of refraction.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Non registrants restricted but perhaps prohibited from cosmetic or otherwise contact lenses. Am tired of seeing these things being sold at chemists and other outlets.

No testing and not supplying spectacles to the usual vulnerable groups.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Our registrants meaning ABDO restricted to measurement and supply of all patients. Also contact lenses if so qualified. Not refraction. Optometrists to refract and perform a full sight test with contacts if applicable. Referring if necessary.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Eye test, eye exam, sight test. Low vision aids, contact lens fit and supply. All the domain of Optometrists.
Fitting and supply of spectacles to patients including vulnerable groups and low visual aids if so qualified.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

First aid. Essential.

If Dispensing Opticians wish to refract, they should use the conversion course.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

On line contact lens suppliers supply lenses often making changes unilaterally. It's not their remit to do this. It should be with a suitably qualified person who's regulated and motivated to assist the patient.

On line specs also produce glasses to an Rx that cannot guarantee accuracy nor trained to check all specifications ie. heights, pd, prismatic effects, tolerances etc. we are trained for this.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

As detailed in the prior question, these on line suppliers should be regulated.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Absolutely. The GOC need to step up and protect the public's sight.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

There's a conversion course for DO's to do if they wish to refract. It is a reduced course of 2 years I understand and not the 4 prior.

This is the domain of the Optometrist, OMP or Ophthalmologist. Having done both the DO and Optom courses, I can say with authority the idea to have DO's testing is unwise in my opinion. Are we protecting the public or not?

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

The only advantage (oxymoron) I see to remove the clause would be for the large corporates. The fees for the testing would be lowered.

The catastrophic effects would be many.

The body has not protected our profession very well in terms of non prescription contacts being sold on the net and in shops. The sale of spectacles on the net and these are a medical device, are they not? The owner of [redacted] was a keynote speaker at Optrafair one year! It's about time our livelihoods we're protected by our paid for association.

Step up please. Our profession has been eroded over the years.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

At present, legislation includes Optoms, OMP's et al for the role of refraction. With the event of an on line eye test recently introduced, I think this is the only tech that should be mentioned in addition. The sight test or testing of sight should be carried out by an Optom, OMP or Ophthalmologist be it digitally or not. We need our governing body to recognise our profession and our jobs are under threat and help protect us. At the day end, if the public can get spectacles from the equivalent of a vending machine, there will be no one choosing Optometry and no fees to the body.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Leave Optoms OMP's and Ophthalmologists to do the reflection and do what they're trained for. Impact will be that public get a thoroughly trained practitioner doing what they have been trained for and looking out for any further potential problems that they have been trained to look out for. These in all likelihood would be missed, which would be a travesty.

As previously mentioned, unregistered selling of contact lenses and spectacles must be included. This, in addition to halting the on line presence of auto testing that's just been advertised.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

However, it may be a prudent move to ask all registrants to take note in a named week, say first week in August to diarise how many referrals are made. You could ask for subsections ie check bp, diabetes reports, cataract referrals etc. then our case for retaining the refraction would be secured. Erosion of our profession should not be tolerated.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

See reply to 19.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

This needs to have a section on cosmetic or Plano lenses. Has there been and prosecutions for any supplier? If so, I've not seen any.

Perhaps it may be prudent to bring a case.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As detailed, on line and shop sellers are still selling these lenses. Are these not a medical device? If not, why not? The body should be bringing these suppliers to task. Also on line contact lens suppliers also sell directly to the public. This is unacceptable also. It's another example of the profession being eroded.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

How can this be regulated?

How do we know if these on line places aren't already supplying these groups. Are they monitored and regulated?

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The body would have to regulate these on line places. Are they checking that they are only supplying over 18's with no pathology?

More should have been done to regulate this.

Pd's are asked for and high Rx's are regularly being dispensed.

On receipt of the frames and lenses, where do you think the Px's go to get them adjusted?

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

Never mind Rx contacts. These are occasionally supplied with a different lens to what's specified. Who makes that decision. We are trained in these things. The body should restrict all supply if not by a qualified practitioner. This would include Plano cosmetic lenses.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

I think the regulations should keep it at the professions domain. These outfits are just about capitalising on the sales. Of course there's a small print saying see your eye care practitioner if you have any problems. Just typical. Passing the buck.

We already are having to write down specifications of lenses.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

As detailed on the last poser. The Rx for the contacts on a prescription enables on line purchasing. A gateway to problems that we have to deal with. Suppliers giving lenses near not exact to the Rx and we are made to write down the specifications. Unbelievable. Of course it's for the Patient's records, not for any other reason. ...

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I think this would be a good move. It would mitigate our involvement of patients getting the wrong/potentially harmful incorrect lenses supplied. We should go further to prosecute any independent or body corporate that supplies any Plano lenses.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Too many px's get on line lenses easily and perhaps don't attend for aftercare. It's all too easy for these on line suppliers to say in small print we advise you to visit your eye care practitioner (for which a fee MAY be charged).
I think the px has to have been for an aftercare within the last 6 months in order for a contact lens to be supplied. The specification given maybe to only last for a period of 3 months. Or not have to be supplied at all. Even better.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

These lenses are supplied easily on line. In my opinion this should be outlawed. Public need to be protected. They are, after all a medical device, are they not?

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

All problems associated with contact lens unregulated wear. The danger to the public can be catastrophic.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Yes it should be regulated to qualified persons only. Perhaps a high profile case would highlight this. The body needs to make an example of a supplier. We are, after all required to protect the public, even if it is from themselves.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

A section in the legislation about these Plano/cosmetic lenses outlawing their supply if not qualified to do so.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The regulation is too soft. On line spectacles particularly with no PD varifocals for goodness sake with average heights and pd's. We are a body that is supposed to protect the public. I cannot understand why these companies have not been prosecuted.

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Risks are with higher Rx's and multifocals of any kind. The sited give videos on how to measure centres etc. our profession is not respected and minimal has been done to enhance the public on our profession either. This must change.

The slogan "if you can read this, thank a teacher" was good. Maybe we can use this too. "If you can see this through your specs, thank an Optometrist". Just a thought.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Absolutely essential. We check the powers and look after the Px. They are our priority. There's a world of a difference between a Patient and a customer.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

I would go further and say if the Rx is over a year old, the Rx should not be supplied. Powers can change overnight. We are protecting the public, are we not?

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

What's to stop a person using a 10 year old prescription to get outdated spectacles? The regulations should be altered to say and Rx that's more than a year out of date should not be done. Maybe even 6 months.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It should be changed to say a year not 2 years for the Rx.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Like any other optical Device, an under 16 has the protections that are necessary.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

For goodness sake. This is for under 16's. They are a vulnerable group and as such shouldn't be supplied from outside the profession.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

We supply and check the specifications that we are trained to do. These are under 16's and should be afforded the protections we facilitate.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

Plano/cosmetic contacts.
Diving/sun specs/on line ordering.

We are trained to do these things. These companies are not regulated. This may lead to incorrect devices. The public should be protected.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As detailed in the last question. Wrongly powered/centred/heighted lenses.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Remote testing. [redacted] have released an on line test for myopes up to presbyopia. I watched their introduction. It uses on line facility to produce a refraction which claimed accuracy. So again, the profession is being eroded. It was a refraction but not called one. Surely the association knows about this?

I urge something to be done to halt this from unregistered people.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

How can this possibly be better or more accurate than a trained person? I'm not a Luddite but have, over the years seen our profession being eroded. This is just another example of this. What's the point in doing all our training, exams and pay for a body that does not do it's utmost to protect the public and our profession?

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Maybe there should be.

[redacted] needs looking in to. Re the refraction of pre presbyopia myopes.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

The [redacted] refraction as previously detailed.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

The profession should scrutinise this company and make sure the public are protected from such endeavours.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Make sure no supply of any vulnerable groups, Rx is within 6-12 months and make sure all measurements are accurate. This I know is impossible. Prismatic effect alone would likely not fall in to tolerances from the Inaccurate pd and heights from the varifocals dispensed.

That is not to say that the pd would have to be supplied. This is not something that we should have to specify either. It's bad enough we have to record the contact lens specifications. That would be a particular nail in the optometric coffin.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Rx 6 months old or less.

Guarantee the Rx is accurate.

Guarantee the heights are accurate.

Guarantee the centres are accurate.

Guarantee the frame fits.

None of these of course can be guaranteed.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

To include saying refraction to be performed by Optometrists, Ophthalmic Medical Practitioners or Ophthalmologists only. No such on line tests to be authorised and unless the accuracy can be guaranteed No on line spectacles should be sold.

The provision contact lens (Plano/cosmetic or otherwise) should also not be sold, unless by a registered and suitably qualified Optician.

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Look in to the on line [redacted] refraction for young and pre presbyopic myopes.

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not Answered

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

testing sight

fitting contact lenses

selling optical appliances to children under 16, including sports eyewear

selling optical appliances to people registered as visually impaired

selling zero-powered contact lenses

dispensing optical appliances to patient groups that can be described as vulnerable, such as people with learning disabilities or dementia, recognising that this requires enhanced skills and knowledge, including:

highly-developed communication skills,

expert dispensing skills, taking into account factors such as facial characteristics and posture

an understanding of medical conditions, such as dementia, and the impact they can have on vision and a patient's behavior

an ability to judge the decision-making capacity of a patient

giving advice on and treatment for myopia management, including through the fitting and supply of spectacles and contact lenses, recognising that treatment for myopia management:

is long-term and potentially expensive

has the potential to reduce the risk of eye disease later in life, as well as slow the development of myopia

maybe of value to patients who are over 16, as well as to children.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

testing sight

fitting contact lenses

selling optical appliances to children under 16, including sports eyewear

selling optical appliances to people registered as visually impaired

selling zero-powered contact lenses

dispensing optical appliances to patient groups that can be described as vulnerable, such as people with learning disabilities or dementia giving advice on and treatment for myopia management, including through the fitting and supply of spectacles and contact lenses

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

dispensing optical appliances to patient groups that can be described as vulnerable, such as people with learning disabilities or dementia, recognising that this requires enhanced skills and knowledge, including:
highly-developed communication skills,
expert dispensing skills, taking into account factors such as facial characteristics and posture
an understanding medical conditions, such as dementia, and the impact they can have on vision and a patient's behaviour
an ability to judge the decision-making capacity of a patient
giving advice on and treatment for myopia management, including through the fitting and supply of spectacles and contact lenses, recognising that treatment for myopia management:
is long-term and potentially expensive
has the potential to reduce the risk of eye disease later in life, as well as slowing the development of myopia
may be of value to patients who are over 16, as well as to children.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not Answered

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

there should be a consistent approach to business regulation, recognising that some activities are within the control of businesses as opposed to individual registrants, such as ensuring that:

there is the right balance between clinical and commercial incentives
there are appropriate standard operating procedures
equipment is maintained correctly and staff are properly trained to use it
All businesses carrying out restricted activities should be required to register with the GOC and comply with its business standards.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Not Answered

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

No, when the GOC considered this question in 2013 it concluded that the risks associated with business practices did not warrant an inspection regime. Since then, the GOC has strengthened the system of business regulation by introducing more comprehensive business standards that make clearer its expectations.

14 Is there an alternative model of business regulation that we should consider?

Not Answered

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

Urgent - act now to respond to the
GOC consultation on the Opticians Act
Respond by 18 July

Last week we let you know about some of the key issues for dispensing opticians and contact lens opticians within the GOC consultation on their 2013 statement and the Opticians Act.

Thank you to all who have responded. If you have not yet completed the online form, we strongly encourage you to do so by 18 July when the consultation closes.

While [redacted] is responding to all 55 questions, you don't have to answer every one. The ones that we recommend focusing on are listed below with the points we will be making in the [redacted] response.

We hope you find this guidance helpful and if you have any specific questions please email [redacted] :

Restriction of activities
Refraction
Restrcting the sale of optical appliances
Supply of sports eyewear to under 16s
Regulating businesses

Restriction of activities
Consultation question 6. What activities should non-registrants be restricted/ prevented from doing?

[redacted] view is that the overarching need to protect the public makes it necessary to continue to prevent non-registrants:

testing sight
fitting contact lenses
selling optical appliances to children under 16, including sports eyewear
selling optical appliances to people registered as visually impaired
selling zero-powered contact lenses

In addition, the GOC should take account of developments in practice that have occurred since the legislation was last reviewed and prevent non-registrants from carrying out the following activities either directly or under supervision:

dispensing optical appliances to patient groups that can be described as vulnerable, such as people with learning disabilities or dementia, recognising that this requires enhanced skills and knowledge, including:

highly-developed communication skills,
expert dispensing skills, taking into account factors such as facial characteristics and posture
an understanding medical conditions, such as dementia, and the impact they can have on vision and a patient's behaviour
an ability to judge the decision-making capacity of a patient
giving advice on and treatment for myopia management, including through the fitting and supply of spectacles and contact lenses, recognising that treatment for myopia management:
is long-term and potentially expensive
has the potential to reduce the risk of eye disease later in life, as well as slowing the development of myopia
may be of value to patients who are over 16, as well as to children.

Recognising that legislative change could take some time, the GOC should review its standards of practice and standards for registered businesses to make clear what constitutes good practice for the benefit of patients.

Consultation question 7. What activities do you think must be restricted to our registrants?

In order to protect the public, the following activities must be restricted to registrants:

testing sight
fitting contact lenses
selling optical appliances to children under 16, including sports eyewear
selling optical appliances to people registered as visually impaired
selling zero-powered contact lenses
dispensing optical appliances to patient groups that can be described as vulnerable, such as people with learning disabilities or dementia
giving advice on and treatment for myopia management, including through the fitting and supply of spectacles and contact lenses
For more details, see answer to question 6.

Consultation question 8. What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

All the following activities should continue to be restricted:

testing sight
fitting contact lenses
selling optical appliances to children under 16, including sports eyewear
selling optical appliances to people registered as visually impaired
selling zero-powered contact lenses

Consultation question 9. Are there any additional activities that you think should be restricted to registrants?

The GOC should take account of developments in practice that have occurred since the legislation was last reviewed and restrict the following activities to GOC registrants only:

dispensing optical appliances to patient groups that can be described as vulnerable, such as people with learning disabilities or dementia, recognising that this requires enhanced skills and knowledge, including:
highly-developed communication skills,
expert dispensing skills, taking into account factors such as facial characteristics and posture
an understanding medical conditions, such as dementia, and the impact they can have on vision and a patient's behaviour
an ability to judge the decision-making capacity of a patient
giving advice on and treatment for myopia management, including through the fitting and supply of spectacles and contact lenses, recognising that treatment for myopia management:
is long-term and potentially expensive
has the potential to reduce the risk of eye disease later in life, as well as slowing the development of myopia
may be of value to patients who are over 16, as well as to children.
Find out more and respond here

Refraction

Consultation question 15. Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

The GOC states in the call for evidence that, "dispensing opticians could undertake refraction for the purposes of the sight test if they are appropriately trained, competent, overseen and indemnified." They go on to say that this would be possible only if they were to amend or remove its 2013 policy statement on refraction.

[redacted] supports the GOC's view that dispensing opticians should be able to undertake refraction for the purposes of the sight test, subject to the stated conditions. Therefore, the GOC should amend its 2013 statement on sight-testing to enable this to happen.

We also recognise that refraction by dispensing opticians for the purposes of the sight test should be under the oversight of an optometrist or medical practitioner so that patients will continue to benefit from an eye health examination in conjunction with a refraction. This is a major strength of the UK's system of eye care and enables eye and wider health issues to be identified and addressed at an early stage in line with the wider health policy focus on prevention.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Enabling dispensing opticians to refract as part of the sight test under the oversight of an optometrist or medical practitioner would be a limited change to the GOC's 2013 statement on sight-testing. What is often overlooked is that this statement already allows dispensing opticians to refract outside of the sight test, e.g. to check a prescription.

The training needed to enable dispensing opticians to carry out refraction as part of the sight test would also be limited. They already learn about refraction as part of their initial education and [redacted] would provide additional training so members' skills and knowledge are up-to-date. The GOC's new outcomes for registration will ensure that future DOs are fully versed in refraction from the outset.

Enabling dispensing opticians to support optometrists and medical practitioners in carrying out sight tests would enable patient care to be provided in a more flexible way while upholding the principle that a sight test should involve both a refraction and an eye health examination.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

the sale and supply of optical appliances to certain groups of vulnerable patients should be further restricted so that it must be carried out by a registrant. Such patient groups should include people with learning disabilities or dementia because dispensing optical appliances to such patients requires enhanced skills and knowledge.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Dispensing optical appliances to people with learning disabilities or dementia requires enhanced skills and knowledge, including:

highly-developed communication skills,
expert dispensing skills, taking into account factors such as facial characteristics and posture
an understanding medical conditions, such as dementia, and the impact they can have on vision and a patient's behaviour
an ability to judge the decision-making capacity of a patient
understanding of medical conditions

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not Answered

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Not Answered

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not Answered

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not Answered

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not Answered

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Not Answered

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 does not create any unnecessary regulatory barriers.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

These restrictions are necessary to protect the public and should be maintained. We do not agree that the fitting process for such sportswear is 'not as complex' as for spectacles or contact lenses. Sports eyewear is fitted not only to ensure optimum vision but to afford protection to the wearer. Therefore, it is more rather than less complex to fit, requiring detailed questioning about usage and enhanced dispensing skills to ensure a safe, optimum fit.

The call for evidence also suggests that the restrictions might be unnecessary because sportswear is 'usually only worn for short periods'. While diving masks, swimming goggles or sport goggles can be worn for short periods, they can also be worn over an extended length of time. In any case, if such optical appliances have not been fitted correctly and/or appropriate advice has not been given, there is clearly an increased risk of harm if a child is unable to see clearly under water or is wearing a poorly fitting pair of rugby goggles. This could also result in harm to team members or competitors.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not Answered

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not Answered

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not Answered

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

Tell us who you are

1 What is your name?

[redacted]

3 Which category best describes you?

Other - please specify

If 'other', please specify.:

Ophthalmologist & Medical Advisor

4 Are you responding on behalf of an organisation?

Yes

Name of organisation:

[redacted]

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

The challenge of a new Opticians Act will be to find an equilibrium between affordable/accessible care vs. safety for the general public.

The more risks a particular optical activity entails, the more important it becomes to regulate it. In my opinion, there are several activities restricted to GOC registrants:

1. assessing the refractive error in minors (<12yo)
2. fitting and selling of new contact lenses (soft/RGPs)
3. supplying low vision aids
4. manage low-complex non-urgent eye diseases, such as dry eye, blepharitis, dry macular degeneration, diabetic retinopathy screening, or ocular hypertension.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

I interpret this question as the need to give a listing of activities that surpass the basic competence/knowledge of a typical registrant:

1. establish new diagnoses other than refractive or orthoptic errors
2. prescribe drugs or eyedrops containing pharmacological active agents
3. perform (laser)surgeries to the eye or peri-ocular tissues.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Not sure / no opinion

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should not be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

See 7.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

I think the surge in healthcare demands will prove an opportunity for opticians and optometrist to play a vital role in eye care. Transferring low-complex non-urgent eyecare to registrars requires post-registration qualification/training, and a register informing the public on the competences of the registrant.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

The 2013 review lacks the digital transformation that eyecare is currently experiencing, and the possibility to deliver remote optical care should be added. Here, the GOC should again find equilibrium between accessibility/affordability of care, and safety to the public.

Deregulation of care provision in location (i.e. enabling remote measurements & prescriptions) will greatly increase the accessibility of care. To maintain safety and quality, the GOC should impose standards on the safety of medical devices (i.e. UKCA, comparable to the EU Medical Device Regulation)

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

Deregulation of care provision in location (i.e. enabling remote measurements & prescriptions) will greatly increase the accessibility of care.

Self-assessments of visual function and checking of prescription glasses democratizes eyecare and will have a positive effect on health equality, since less means and less time needs to be devoted to check one's visual acuity online rather than in-office/in-store.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

I am not familiar enough with the framework of other entities that perform health inspections. One entity with the right to inspect and enforce should suffice.

14 Is there an alternative model of business regulation that we should consider?

Yes, another model (please specify)

Please give your reasons and provide any evidence to support these.:

The GOC is a complex entity, and a separation between rule-making, rule-enforcing, and appealing could strengthen the regulatory framework for opticians/optometrist.

And interesting example is the Dutch model. Optometrists & orthoptists are associated, issue quality guidelines, and have an official quality register. Opticians and optician stores are associated, with their own quality guidelines. Ophthalmologist also have an official quality register and are regularly & obligatory inspected by their peers.

The eye-care associations collaborate quite effectively in bringing safe and effective care to the public.

The Health Inspection (ministry of health) can inspect & enforce registered health providers, as does the Authority for Consumers & Market for optician stores.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

The relative safety of refractions allow dispensing opticians to issue prescription glasses.

No lasting or serious harm is expected in an extent that offsets the benefit of increasing access to care. Wrong prescriptions can be replaced, and the (remote) oversight of an optometrist in the process aids in maintaining a standard of quality.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

First and foremost, allowing dispensing opticians to refract will greatly improve access to eyecare, and potentially reduces the costs of refraction. This is good for health equality and for the general public, who pay less for a comparable service.

The major downside is that an optometrist refraction entails a more comprehensive examination of the eye and vision related complaints, leading to a higher quality, at a presumed higher price-level.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Access to vision testing is essential to create awareness of poor eyesight and reduce its societal impact. The best way to do so is by making vision testing easier available. This can be achieved by deregulation, effectively allowing web-based/remote self-assessment of visual function.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Current restrictions in vision testing puts an unnecessary barrier in the eyecare process. These restrictions lead to less vision testing, less awareness, and a bigger impact of poor sightedness in the general public.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

In the Dutch situation, opticians are allowed to issue prescriptions, but not to establish diagnoses other than refractive errors. Since the majority of vision loss is due to uncorrected refractive errors, and the optician can follow-up after a sale, there is little lost value by skipping the eye health check. Self

reported complaints (pain, red eye, acute vision loss) trigger the need for an eye health check, and here the optometrist plays a vital role (either on location in the store, remotely in the clinic, or digitally).

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The fitting of new contact lenses should always be done by an eye care professional (i.e. a contact lens specialist), as are replacements of RGP-lenses.

Soft-contact lens renewals are less complex and entail less risks. I consider that this can safely be done by dispensing opticians, or remotely.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Again, access to care and lower anticipated costs are possible, lest judicious management of this process is overseen by the GOC.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

I consider that dispensing glasses are safely possible by dispensing opticians from 12 year onwards.

For dispensing low vision aids, I'd advise to have additional training, or restrict this to specialized optometrists.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Lowering the age to 12 (in stead of 16), liberalizing the issuing of prescriptions to opticians, and the ability to perform remote digital assessments, will all contribute to better access of eyecare and a lower price. There are no solid arguments why the assessment of visual acuity or refractive assessments is fundamentally different for a 12yo compared to a 16yo. Both need a form of parental consent of course, but medically, the cases are identical.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

n.a.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

as mentioned before, a liberalization of the optical care, will increase the access to care. This is a good thing, particularly for screening purposes, as neglected porsightedness/blindness is treatable in 80% of the cases, also in Western Europe. The major drivers for poor sightedness are uncorrected refractive errors and cataract, both diagnoses that a optician can establish, or at least screen for.

Digital remote screening of elderly (for instance by a home care nurse) has a proven effect on the identification of porsightedness in a home care population. These patients can be referred for visual aids or optical appliances. A lower entry to the identification of these cases, will improve general wellbeing.

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

I suppose upselling of optical appliances by commercial entities is a relevant threat to the budget. This could be curbed by either additional training/registration and by a separation from sale and reimbursement.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

As mentioned above, I think it is wise to implement a strict evidence-based reimbursement system for optical appliances to ascertain health equality whilst curbing the societal expenditures.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Yes

Please give your reasons and provide any evidence to support these.:

This can be argued in several ways, but predominantly, one could question whether a prescription should be renewed every two years by an optometrist.

If a patient/client rates the quality of vision with is prescription as good/excellent, and a vision screener identifies that the visual acuity is on par/unchanged, why should one than be referred to an optometrist to redo the measurement. The chances that this investigation will create added value is small, while the costs are almost the same for a new prescription, or a complex prescription.

Liberization of dispensing by imposing vision checks (either in store, or remotely at home) rather than by imposing costly optometrist refractions, can reduce the costs of optical care, whilst maintaining its quality.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

n.a.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

n.a.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

n.a.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

n.a.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

n.a.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

We develop and clinically validate technology for the remote assessment of visual acuity, reading acuity, and refractive errors. We are the world first certified online eyetest, and have an ongoing research program. please see [redacted]

The scientific results are published open-access by Wisse et al. JMIR 2019.

The recent 2022 London 100% Optical trade event underlined the acceptance of digital tools for remote screening and issuing of prescriptions in the UK.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

increasing access to care improves the democratizing of care: self-measurements are related to self-awareness, and can reduce the burden of blindness and poor eyesight by identifying cases with preventable vision problems.

In addition, digital tools have the power of scaling and cost-reduction. Visual acuity screeners can be self-performed with automated outcomes directly available to the user. Refractive assessment can be levied out of the office/shop, and transferred to the comfort of one's home.

Reducing the amount of visits to the hospital/clinic have proven the highest impact on cost-effectiveness for eHealth solutions in general: the societal costs for travelling, unproductive time etc are seldom accounted for, but do add to the societal costs of eyecare. These are greatly reduced with valid home-testing.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

It is unclear how the GOC manages/enforces business development of a digital transition. It should be made possible to deliver eyecare remotely, either automated or under the supervision of an optometrist. It is unclear whether this is/will be allowed, whether supervision is mandatory, whether supervision should be done by an optometrist, whether this optometrist should be UK based and/or GOC registered, whether the GOC will play a role in appeal cases, whether the GOC has any voice in the market entry of new digital players. etc. etc.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

There is virtually no framework on how to handle the GOC guidelines for remote eyecare, nor is it predictable how the GOC will rule when cases are taken for appeal.

After Brexit, the UK now has its own certification system for Medical Devices, but is unclear whether the GOC will enforce that digital/remote vision testing should always be done with a certified Medical Devices (either CE or UKCA). I believe it should, since certification puts high standards on quality management and clinical validation.

Another issue is that it is unclear whether the GOC will propose additional labels/checks to prevent risks to patients. I consider that 'augmented intelligence', where a remote digital procedure is supervised by a UK-registered optometrist should be the best equilibrium between quality and accessibility of care.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Yes, open discussions with stakeholders, patients, digital health developers, legislators, and regulators, preferably also from other countries as to have an open mindset to possible solutions.

(I'd be happy to come over to the UK..)

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

making eyewear more generally available to the public will increase competition and lower consumer prices. online sales have the potential to cut costs, and it's an industry fact that prescription glasses have a fair retail margin currently. this is not in the interest for consumers.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

I'd advise to deregulate. In the UK, the prescription is already decoupled from the dispensing. Both process could be offered online, and both would increase the access to prescription eyewear at lower costs than currently.

Importantly, with a shrinking work force, and increase eye care demands, we all need to look for solutions to keep our care delivery sustainable. This is the major challenge of our time, and the Opticians Act should play a pivotal role in addressing and enabling the needed digital transition in eye care.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Other - please specify

If 'other', please specify.:

Optical manager

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Dispensing restricted category's
Interpretation of clinical exam data

7 What activities do you think must be restricted to our registrants?

Please provide details.:

See previous answer

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

With no or little refraction taking place, the optometrist could spend more time discussing eye health with the patient and also in a potentially shorter test slot time, which for routine patients, would help reduce the post covid back logs

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patient safety and quality of care

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Patients can buy online without a prescription regardless

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Mental disability, conditions where are unable to provide consent

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Greater patient care where a optical assistant may miss an aspect of the dispense that could effect optical quality.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Customers would buy online and not from practices who could intervene where needed to prevent eye conditions.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

These products are not quality checked

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

They could get glasses at short notice however this could put off regular health checks

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

OTC devices such as rx swim goggles are not permanent corrections so should be able to be sold as an accessory.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Working in an nhs EECT during covid

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Increased access to healthcare

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Reliable platforms, patient expectations

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Not enough enforcement of restricted category's, no responsibility for prescription non tol issues, taking PDs etc.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

More awareness of the proper routes for recourse in the event of a non tolerance issue

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

Yes

Name of organisation:

[redacted]

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Finalising/communicating decisions on patient management without oversight by a registrant.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Confirming management plan for patients, signing off prescriptions of medications

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should not be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Regular auditing & feedback would be beneficial to businesses

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes - under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

Sight testing as a delegated tasks to help with resource issues with optometrists, especially in hard to recruit/remote areas, also to allow optometrists to focus on ocular health rather than refraction

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Advantages - optometrists can spend more time on ocular health, helps any resource or recruitment issues

Disadvantages - financial investment in DOs additional training, likely increased salary cost of DOs

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Time pressure on optometrists to carry out more tasks during appointment rather than focussing on ocular health.
Potential of technology like [redacted] may be able to do this task

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

Approx 5% in my practice

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Sometimes if aftercare is in date but sight test has expired

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Potentially greater number of complications if non registrants are not trained to appropriate standard

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Under 10 year old
High prescriptions over 10D
Visually impaired

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Further restrictions may make it harder for vulnerable patients to access optical appliances

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Potentially great complications if training is not up to standard

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

More patients going online to access contact lenses meaning they could buy any type/spec and potentially increase complications

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

As it is still a piece of material going in the patient's eye there is a still a risk

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Eye health not being checked and potential ocular issues going undetected.
Patients wearing wrong prescription, especially if a driver/operating machinery

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Restricted access means less likely to buy/more difficult and expensive - if more accessible then more likely parents will buy and therefore more children will have protection

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Potential remote eye testing where an optometrist does a virtual consultation with a delegated registrant operating equipment

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

More delegated functions, more focus on ocular health, ability to provide eye care in hard to recruit areas

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

If only optometrists are able to carry out sight tests then the issue of resource is not solved

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Potentially people buying poor quality/faulty products that are not up to standard

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

No, you will find specific details in the answers I have provided throughout. The objective should be to tighten regulation in the interest of protecting the general public.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

All those activities I have listed in question 7 as each may pose a risk to the health of the general public and specifically those receiving the service.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Testing of sight (all aspects including but not limited to health assessment, BV and refraction)

Fitting and aftercare of contact lenses

Selling optical appliances to children under 16 and those registered visually impaired

Selling zero powered contact lenses

Selling/dispensing optical appliances to those with prescriptions of +/-5.00D and above due to the potential need for vertex distance compensation, that can otherwise risk being overlooked or miscalculated.

Selling/dispensing/fitting safety eyewear in the interest of public health protection.

Selling/dispensing optical appliances to those with severe learning difficulties, disability or special facial characteristics where more consideration is required in determining appropriate lens and frame choice as opposed to an "off the shelf" solution.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Selling/dispensing optical appliances to those with prescriptions of +/-5.00D and above due to the potential need for vertex distance compensation, that can otherwise risk being overlooked or miscalculated.

Selling/dispensing/fitting safety eyewear in the interest of public health protection.

Selling/dispensing optical appliances to those with severe learning difficulties, disability or special facial characteristics where more consideration is required in determining appropriate lens and frame choice as opposed to an "off the shelf" solution.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Undoubtedly we should work for the improvement of the industry and improved standards of care for the general public. I do not have specific information on additional qualifications/training but I support further accreditation in relative fields which should be promoted as in the context of glaucoma and medical retina certification and the IP specialty. It is important these qualifications/accreditations are well considered and I do not support the idea of dispensing opticians refracting through such accreditation as it is too intrinsically linked with the binocular and health status of the patient to become a separate function.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

In my view it is important that any businesses providing optical services and/or appliances to the general public are registered with the GOC and meet the appropriate requirements that allow them to do so. Route to registration and regulation for business should be uniformed but robust and with strict criteria around compliance with current GOC regulation.

Regulation should tighter as opposed to being relaxed, in the interest of maintaining high standards within the profession and protecting the healthy and safety of the general public. Criteria should prevent rogue companies operating in ways that are illegal, unethical and unsafe e.g. preventing unregistered businesses from selling contact lenses that the general public can obtain without a valid prescription, specification, fitting or even any general point of intervention that could protect them.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

What must be understood is exactly what is implied by "simpler and more effective" business regulation. If in simplifying regulation the result is simply diluting the standards of the industry, resulting in lower quality across the board, then this is simply unacceptable. Easier is not always better, particularly when dealing with peoples health and wellbeing. Compromising on quality is not and never will be the answer, it would simply be negligence.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Yes however these powers would need to be used with the right intention and not abused. The primary agenda should be to protect the public whom we serve as registrants and equally to protect our registrants and the profession as a whole. Tighter standards are necessary to achieve all three of these. Powers of inspection, in my opinion, would grant the GOC greater power to intervene in the interest of public safety but should be used to maintain tight regulation of not only individual registrations but the function of the whole optical sector in the UK.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

The GPhC is a sensible model however the responsibility for regulation and standards should not fall on one individual. Many optical practices employ numerous Optometrists, DOs, CLOs and are owned/directed by registrants. The business owner/board/directorship should be regulated, as should the individual registrants working within these companies.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

As a dispensing optician (CLO) and now student optometrist I do not believe it is in the best interest of the general public for refraction to be performed by dispensing opticians, either with or without "oversight" or supervision.

As any Optometrist will know that a thorough and accurate refraction requires underpinning knowledge of (among other things) accommodation, binocular vision and ocular motility. These areas are themselves then linked to other factors such as the ocular health status. Reduced visual acuity can of course also indicate underlying pathology. Therefore the separation of refraction from the rest of the eye examination (namely the BV status and health assessment) is completely unacceptable and likely only to encourage negligence. The appropriate tests all need to be conducted by the suitably qualified optometrist.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

I believe that the only motive for deregulating refraction/enabling DOs to refract is monetary and driven by both profit and greed and is not at all in the interest of the profession as a whole or the general public. Some companies will use this as a way to churn out dispenses with the sole goal being profit, this does not align with the high standards to which we hold ourselves in the industry as is akin to bringing the profession into disrepute through the encouragement of negligence.

The negative impacts include (as previously mentioned) the separation of eye health assessment, binocular vision assessment and the refraction which are all very much interlinked. Whilst a DO may be able to understand the steps of refraction they are not trained in BV, anatomy or pathology to the extent of the Optometrist and therefore cannot truly perform an accurate and comprehensive refraction with all the necessary considerations. The Optometrist is already trained and qualified to perform these functions safely and to make the necessary links. I say this as a DO/CLO now studying Optometry, who has become acutely aware of the difference between learning the steps of refraction and actively refracting as part of a thorough vision and health assessment through my university clinics.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The legislation as it currently stands serves to protect the general public and ensure high standards are maintained across the profession. If anything, arguably elements of the legislation should in fact be stricter to enable more adequate protection e.g. preventing sale and supply of contact lenses by rogue companies, the dispensing of spectacles to vulnerable groups etc. The legislation should certainly not be changed in any way that lessens current regulations, this will only put the general public at risk and cause the destruction of the profession.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantages are that the general public is safer (full and comprehensive eye exams), less confused (simpler structure of services - less fractured and convoluted), refraction will be performed to an appropriate standard (considering BV, motility, accommodative issues, pathological/anatomical factors) resulting in better long-term outcomes. Generally higher standards will be maintained across the industry which is something we should continue to pride ourselves on.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

I do not have information on this but it is easily researched and I do not feel it is in anyway relevant to the line of questioning. If the implication that DOs refracting will free the Optometrist up for a purely "health led" consultation and ultimately reduce referrals to secondary care, I think this is a gross misjudgement. With DOs refracting I think the chance for overlooked BV anomalies and pathologies will increase exponentially and the outcome will be worse for patients who fall victim to the negligence this proposal creates. As a result secondary care will eventually be under further strain.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

You need only look at the syllabus for a DO course at any of the current establishments to realise that the current training and knowledge level of a DO is not sufficient to undertake such activity proficiently.

Even with additional training I do not believe it appropriate to consider this separation of activity, as unless the DO is converting into Optometry they will not truly have the understanding required (as discussed in an earlier answers) to ensure the refraction is accurate and appropriate when they are unable to make other assessments in regards to BV status, accommodative status and ocular health.

This is not a criticism of the DO, I am a DO/CLO myself (now studying optometry), but the type of registrant sufficiently trained to undertake refraction is evidently the Optometrist and there is no need make the industry more convoluted. A DO would need to undertake extensive training to the point they may as well undertake an Optometry program. This proposal serves no purpose.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

It is important that the fitting, sale, supply etc of contact lenses remains tightly regulated in the interest of public safety. Incorrect/inappropriate fitting and/or supply has the potential to negatively impact the vision and/or eye health of the patient (potentially permanently). This could also impact the wider public if the affected individual whom has a reduced VA from inappropriate lens fitting, for example, operates heavy machinery, drives privately or commercially (taxi, school bus, lorry), handles medication or is in any other position that could cause harm to themselves or others resulting from substandard acuity.

Time and time again in practice the consequences of poor contact lens instruction, tuition, fitting and supply are seen when patients purchase lenses online and neglect to ensure regular aftercare. They do so without understanding the risk to their eye health and vision, often as a result of neglect from online suppliers. It should not be possible for the general public to purchase contact lenses like sweets, they are a medical and optical appliance and it is important therefore that they are only fitted and supplied by those who are registered and adequately qualified.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantages are evident from my response to the former question (Q21), where I state the consequence of relaxing this legislation. Tighter regulation should be sought to deal with neglectful online suppliers operating with the sole purpose of profiteering, often at the expense of the general public whom we as registrants seek to protect. As contact lens products continue to advance it is even more important that supply is only via qualified and registered practitioners as the complexity of a myopia management, multifocals, torics, orthok, sclerals etc. required specialist knowledge and expertise to achieve the correct results.

Also, when considering any form of refractive correction we must consider BV. A contact lens specialist or optometrist will understand the impact of a refraction/cl over-refraction on BV. These consequences of poor correction cannot be understood by an unskilled business or individual.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

As stated, sale and supply to under 16s and the visually impaired should remain restricted. In addition sale and supply should also be restricted to those patients with a prescription exceeding +/-5.00 due to the impact of vertex distance and possible compensation (as well as increased prismatic effect from incorrect centration). Certainly, prescriptions of +/10.00 should be restricted as these impacts are even greater.

I feel it is also important to restrict the sale and supply of safety glasses as there is generally very inadequate training of optical assistants or other non-registrants. They should not be in a position to determine appropriate lens/frame choices for a patient where the patient's company have not specified via their H&S officer.

Furthermore, clinically vulnerable patients including those with severe learning difficulties or disability (including those with Visio-spatial or auditory-phonetic SLD) should also be restricted as registrants with prior learning will be in a better position to provide appropriate care and solutions.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The main advantage is that the public whom we seek to protect are better protected, supplied with more appropriate optical appliances/solutions for their needs and lead a better quality of life as a result.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

No, they do not create any unnecessary barriers, contact lenses are an optical/medical appliance and should be regulated as such. It should not be possible for people to buy them like sweets and put their eye health/vision at risk. Furthermore, the general public should not be able to acquire contact lenses without a comprehensive fitting as they can pose a risk not only to themselves but others e.g. if their visual acuity is subpar. It's not unusual to see patients in practice who have self prescribed and fall below driving standards despite operating heavy machinery or driving commercially. If it is made any easier for unregulated sellers to operate then these sorts of problems will only increase.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Without a shadow of a doubt these requirements should be stricter to better protect the general public. There should be no further relaxation/deregulation of these activities.

There is an FTP case I am aware of at the moment where a registrant is being investigated for issuing a new brand of contact lenses to a patient without appropriate fitting. That they have done this is of course wrong but it makes a mockery of the current system that they can be chastised for this action as an individual yet online businesses can sell contact lenses freely without any verification.

Similarly to the issues I've already outlined, the relaxing or removal of supervision/general direction requirements will increase the risk of inexperienced and untrained colleagues issuing contact lenses to patients without appropriate fitting, instruction and care. This should not be possible.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

No as these requirements are there for the wellbeing of the general public/patients. Any lesser requirements create greater risk would be akin to negligence.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Most businesses who claim to verify such specifications evidently do not as working as a CLO in a busy multiple practice I am yet to receive a single phone call to the department from any online suppliers of lenses for such validation. I believe if these companies were sufficiently audited they would not be able to produce evidence that verification is routinely performed.

Supply of contact lenses without verification/validation puts the consumer at risk and perpetuates this damaging notion that you can stick anything in your eye without ramification. As a CLO I too often see patients who have fallen victim to companies such as [redacted] and [redacted] who have been lured in by a cheap deal and a marketing ploy and end up with corneal events, poor VA, poor comfort/lens tolerance all due to lack of proper fitting and aftercare. Not the mention that many who fall victim to this only attend for AC every 3-4 years as the casual nature of the purchase leads them to believe regular AC is unnecessary.

A contact lens is considered an optical appliance/medical device and should be regulated as such. They have the potential to cause irreparable damage the eyes/eyesight through incorrect use and it is in the interest of the general public that they are dispensed only with the appropriate care and advice.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

It would not hurt for aftercare to have a definition, providing that definition is appropriate and incorporates all important aspects of the aftercare and is not used to dilute requirements.

Undoubtedly an aftercare should at the least include:

Reason for visit/chief complaint

History and symptoms including POH/FOH/PGH/FGH

Wear and care compliance (cleaning, care, hours per day, days per week, I&R etc)

VA assessment and over-refraction

Fit assessment

K readings and VA with current specs/spec rx

Anterior eye health assessment

Anterior eye health assessment with fluorescein

Any further assessment as deemed appropriate e.g. topography, dry eye (tearoscope, schirmer, phenol red thread etc)

Advice and recall

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The only perceived barrier would be that for non-registered businesses who wish to sell CLs with their primary concern being to turn a profit as opposed to the protection of the general public. We should not be considering making the sale and supply of zero powered contact lenses easier as all this days is help irresponsible businesses and result in increased risk to the general public. The general public should not be able to acquire lenses without appropriate instruction, tuition, information on risks vs. benefits/pros and cons and thorough assessment of compatibility and fitting.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

If the regulation is lessened as the sale and supply of zero powered contact lenses is relaxed the general public will be put an increased risk. This common misconception will be that obtaining CLs without appropriate assessment and fitting means that it is safe and risk free to do so and will result in misuse. The general public have a right to be suitably cared for and informed whether being supplied powered of non-powered CLs.

Additional risks of lax standards include increased incidence of MK, acanthamoeba keratitis, CLPU, corneal abrasions and subsequent infection, other associated eye damage. As we know some of these conditions could lead to permanent and life altering effects.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Yes. Risk can only be mitigated if standards remain high and legislation exists to protect the general public from harm, as I have outlined in previous quesitons.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantage would be that the public remains better protected vs. "lessened" legislation enabling the irresponsible provision of CLs (for reasons previously outlined). However, legislation could still be more tightly controlled to reduce risk to the general public even further e.g. preventing unregistered businesses from operating online due to loopholes in the current legislation.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

No I do not believe that there are any regulatory barriers that are restrictive of future development, rather that regulation could be stricter to ensure that future developments align with the standards to which registrants are currently expected to conduct themselves. We should be thinking of how to provide uncompromised care efficiently and I would suggest most of the assumed proposals of this consultation will actually compromise care in favour of profiteering.

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

I have answered no but I will stress, as above: We should be thinking of how to provide uncompromised care efficiently and I would suggest most of the assumed proposals of this consultation will actually compromise care in favour of profiteering.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Yes, as I have outlined in others answers the current legislation is weak and is already bypassed by the online market and "non-registrants" hence making a mockery of the system.

Legislation should in fact not only protect the currently restricted categories but should also serve to protect the most vulnerable from harm and from being taken advantage of. In addition to u16's, SI and SSI, complex rx's (and even those exceeding 4.00D due to BVD and fitting considerations) should be protected as it should not be possible for these patients to receive subpar care and appliances. In addition to complex rxs those with SLDs, those who drive commercially and all sports and safety dispenses should be protected by legislation.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

No, this is essential for protecting the individual themselves but also the wider general public. Failure to ensure an up-to-date prescription can result in substandard vision correction and if we relax these rules we put people at risk.

As we know from studies around falls, vision is an important factor, particularly in the elderly. Aside from that example, consider the taxi driver, school bus driver, paramedic, electrician, construction worker, pharmacist etc. People may not only endanger themselves and others by casually dispensing an old prescription and failing to have regular examination but could easily pose significant risk to others.

At present, registrants are in a position to make an informed decision taking in to account all manner of factors before determining the suitability of dispensing an old prescription. It is the years of training that helps a registrant come to an appropriate decision and it is their professional responsibility that makes them suited to this decision. For many optical assistants or businesses that are non-registrants the occupation is a stop gap or something to "pay the bills", whilst this is not a criticism they should not be expected (or put in the position) to make decisions that directly impact the wellbeing of an individual or group of people.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I do not perceive any advantages. The uninformed patient may perceive this to be convenient but this will stem from a lack of understanding. A well informed patient, I believe, will see the value in an up-to-date examination and prescription. In exceptional circumstances the registrant is currently in a position to make a considered and appropriate decision with the patients best interest in mind.

The disadvantages I have outlined in the former question (Q37).

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantages, as previously outlined, are improved protection of the individual and the wider general public.

I do not perceive any disadvantages as I believe it is important to act in the patients best interest and not in the interest of simple convenience.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

No, it should not be possible for children (u16) to acquire sportswear that is substandard and hence it is important to regulate these dispenses. Many children opting for sports eyewear only do so because they of moderate-high ametropia as often those with low ametropia will attempt to cope with out. With moderate-high ametropia is of course more imperative that the frames and lenses are dispensed appropriately so as provide adequate vision. In addition, poorly fitted sports eyewear could lead to injury and so it only makes sense that a qualified registrant with both the capacity and enthusiasm determine suitability should dispense such an appliance. This decisions should not be bypassed in favour of unregulated online sales or put in the hands of employees who may unfortunately only choose to be in this occupation to pay the bills. Passion, care and experience are what the registrant is trained to deliver.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As alluded to above there is a risk to the health of the patient and these patients are young and vulnerable, they can't necessarily make these choices for themselves and nor can lay parents/guardians who may fall victim to cheap marketing ploys.

As registrants we are in a position to use the benefit of our education and experience to determine the most suitable choices for all of our patients and it should be with pride that take care of those most vulnerable.

It is important to consider factors such as durability, impact resistance, filters, style suitability (cycling, squash, football etc) to ensure an effective appliance is dispensed. A patient is unlikely to be aware of the appropriate standards for the sport they play (or may play multiple and use one generically for all) which will affect performance and again potentially put them at great risk. It should not fall to uneducated retailers to guide patients into these purchases and that is the risk with deregulation.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I feel my answer to this has been outlined by my previous answers on this topic. It is better for legislation to remain as it currently does to ensure high standards of care are maintained and to reduce risk to TBC

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

I do not think there are any unnecessary regulatory barriers in the sale/supply of optical appliances, to the contrary I think that the sale and supply of optical appliances is currently poorly regulated, bordering on negligent and any further deregulation would be unacceptable.

Current regulation does not have the general public's best interest in mind and should be strengthened to ensure that they receive only the best care

from suitably experienced (qualified and registered) professionals. At present, unless the patient is registered SI/SSI or is a minor (<16) dispensing is a free-for-all.

There are many more groups of patients who are vulnerable, including but not limited to:

- SLD
- Elderly (significant risk of falls from poorly fitted/inadequate optical appliances)
- Special facial characteristics
- Moderate-high ametropia $\neq >4.00D$ (BVD considerations)
- Anisometropes
- Aphakes
- Monoculars
- High risk occupations (requiring safety specs/safety eyewear)
- Commercial drivers (public transport, private hire, plant operators)

...and the list goes on.

It should not be possible for people who are at risk of harming themselves or others due to inadequate optical correction to obtain substandard optical appliances (spectacles or contact lenses) either through incompetence, neglect, dispassion, inadequate training or education of the provider. This includes through the negligence of online retailers to ensure accuracy/validity of a prescription, fitting of an appliance etc etc.

We have a duty of care and currently the regulations allow too many to make their own interpretation or bypass these in the interest of profit. We should not encourage the ethos that "profits>patient care" and so our regulations should be tighter, not relaxed.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I feel I have addressed this in my previous answer, however to confirm the advantages of regulations staying the same as at present, are simply that we still retain a level of care and ability to protect the general public. Greater advantage comes from tightening these regulations.

The advantages of tightening the regulations, as I have outlined previously, include:

- Greater protection of the general public
- Greater protection of the most vulnerable patient groups
- Increased patient education and awareness
- Less risk of profit driven abuse/neglect
- Greater trust from the general public and increased interest in their eye care

In contrast, the disadvantages of relaxing regulations are:

- General public is at increased risk of harm to themselves and/or others due to lax standards
- General public is at increased risk of being taken advantage of by rogue retailers (inexperienced, dispassionate, profit driven, using marketing ploys to mislead)
- A general slip in standards across the industry will lead to less interest of gaining employment in what is essentially a primary care sector that needs continued interest of employment to serve future generations
- A general slip in standards will also lead the general public to have a negative view of the industry and is akin to bringing the profession into disrepute.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I only have experience of working for a large multiple where recent leniency towards remote care seems to promote a casual attitude toward patient care. I foresee that any promotion of remote care, under the guise of convenience, will merely result in slipping standards as with my prior points patient care should come first and not be compromised such activity.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

You only need to look at the statistics on the vast amount of people who have missed out on essential care during the covid-19 pandemic and ultimately become very ill or lost their lives to realise that remote care is not a suitable replacement for a face-to-face consultation. Remote care is better than no care but it is not at all a substitute for thorough examination. In addition, you must consider how many people still struggle with technology be it due to age, capacity, ability etc. These groups are at an immediate disadvantage if we propose to make remote care common place. The general public deserve

more and we can provide more.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Remote care has been pushed, particularly by multiples, for CL consultations over the course of the pandemic and I feel is now being used as a way to minimise chair time in the interest of profits but not in the interest of patients. These activities should better regulated and discouraged with face-to-face consultations remaining the norm.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

At the moment it appears legislation/regulation is only applicable to registered opticians/optical businesses. Therefore, any busy operating in this sector should be regulated - it should not be possible for companies to bypass rules/regulations simply by not being registered. Ideally, all companies in the sector should be run by registrants to maintain high standards or those business that aren't should at least be regulated regardless of their registration status.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

At the moment it seems anybody who wants to turn a quick profit can start selling contact lenses and spectacles online without demonstrating appropriate knowledge, responsibility or concern for public welfare. We should not find ourselves in a position where skilled and qualified registrants are competing with unqualified businesses to provide similar products when evidently only the registrants are truly skilled and correctly motivated to do so.

Work should be done to clamp down on online sales as they create more harm than good. Online businesses should not be claiming it's ok to buy glasses online and to simply "pop along to your local optician for an adjustment", they shouldn't be selling/supplying contact lenses without any evidence of a valid specification and they shouldn't be villainising the optician as a marketing ploy.

We have all had the experience of a patient buying random contact lenses online, only to end up with terrible vision, ulcers, a lens "stuck" in their eye etc since they've had no appropriate instruction or care provided. We've also all encountered the spectacle wearer who has diplopia induced by their specs bought online with a OCs/PDs plucked out of thin air I dare say we have also all encountered the parent who has purchased specs to their child's (u16) prescription online despite the fact this supply should be regulated.

The general public should be educated and protected, not taken advantage of by misleading sales tactics by unregulated companies.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

We should be seeking further regulation of rogue businesses, as outlined in my former answers.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The primary questions that seem to be raised by the consultation are of main concern at this current time. Currently regulation is weak and already has flaws, as I have outlined in my previous answers and should not need to reiterate our regulation should protect the general public. Until we have fixed what is wrong here, further considerations should be on hold.

Primarily, everything we do should have the welfare of the general public in mind and current questions (which read more as proposals) do not seek to

do this.

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Again, I have outlined these and do not believe I need to reiterate them here but in brief we should be making regulation more robust to protect the most vulnerable - is that not our professional duty? We should seek to prevent unqualified, inexperienced or simply rogue retailers from taking advantage of the general public's naivety surrounding optical care and provision and instead promote professional care and services and educate the public in the process.

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

If you fail to regulate the sale and supply of optical appliances for the most vulnerable then you put them at unnecessary risk and disadvantage. There should be an element of safeguarding in respect of the standard of services we provide.

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Student optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

I do not believe that the current form an eye test takes should be changed. I am a dispensing optician who has just finished my optometry degree and about to start pre-reg, I don't feel I had the necessary knowledge or skills to undertake refraction as a dispensing optician. I also feel that separation of sight testing elements undermines the profession and the professional qualification.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

All elements of the current eye examination.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction, eye health examination, clinical questioning, dispensing to children and low vision patients. Prescribing contact lenses.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

The selling of contact lenses and spectacles online without having to undertake the same duty of care to patients.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

I am a dispensing optician who is about to start pre-reg. I did not have the necessary skills as a dispensing optician to fully understand the complexity of the refraction process and do not believe I would have been capable. Even with further training you would confuse the matter with effectively different levels of dispensing optician. It is also unfair to expect optometrists to oversee the process and put their signature to refraction if they themselves haven't completed it.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

I can see no positive benefits. Optometrists would have their position undermined, some employers may take advantage of the can in regulation in the pursuit of financial gain and risk patient safety.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patient safety would be maintained. The professional qualifications wouldn't be undermined.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No disadvantages, that I can see and patient safety is maintained.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

No

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patient safety.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Patients, being supplied incorrect or inferior products, with difficulty in returning the product or rectify the situation.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Damage to eye health, risks to patients sight. Possible driving standards not being met. The public devaluing the importance of eye examination and unknowingly risking their own eye health.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protect of eye health.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patient safety

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patient safety.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

Equality, diversity and inclusion

[redacted]

[redacted]

Tell us who you are

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Sight testing
Contact lens fitting

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Sight testing
Contact lens fitting

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

no

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Further qualifications such as Contact lens (for optometrists) or Glaucoma specialties should be registered with the GOC.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

No, although if they are a DO with a CL qualification, they should be able to refract in order to check their contact lens specifications are correct.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

DOs refracting does not impact equality, diversity and inclusion. A DO with a CL qualification should be able to refract but not carry out a sight test.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

In a hospital setting, orthoptists can refract under supervision.

A lot of refracting is done using an auto-refractor. The optometrist checks the refraction. Perhaps there needs to be legal differentiation between sight testing and refraction.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Optometrists are moving into areas traditionally covered by ophthalmologists (extended roles, independent prescribing etc), and other professions (such as orthoptists) are moving into roles previously done by optometrists. It would make sense for the legislation keeps up with current trends.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

As above Optometrists are moving into areas traditionally covered by ophthalmologists (extended roles, independent prescribing etc), and other professions (such as orthoptists) are moving into roles previously done by optometrists.

This is not data as such but can be found in numerous hospital eye departments.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Contact lens fitting can cause immeasurable harm if done badly. Regulation should continue.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantages - see above. It protects the public to have regulation in place.

Disadvantages - Difficult to regulate online sales. This does not seem to stop unregistered online selling.

Impact - risk of unregistered sales leading to eye infection and other problems.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Children

Patients with learning disability

High prescriptions (e.g. > +/-8.00)

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The above groups of people are more vulnerable and care is needed to fit them with an appropriate and comfortable optical appliance.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

See previous answers about contact lenses.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

Generally, patients who have been given a copy of their own prescription, are able to work out if the lenses they have are correct or not.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

They may not notice if the wrong lens prescription was substituted.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Specific follow up after contact lenses have been fitted and issued to ensure the lenses are still fitting correctly and the health of the eyes is not compromised by ongoing lens wear.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Unregistered zero powered lenses sold to the public can be poorly manufactured, delivered in unsafe solutions and fit badly leading to varying degrees of eye health issues. These issues can range from irritation to blindness.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

See above

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

See above

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It does not cause unnecessary difficulty at the moment. The risks outweigh the benefits of stopping regulation. However, there will always be those who flout the law and ways to buy illegal and unsafe products.

Just because unregistered products are available, it should not stop regulation in order to discourage most people from buying them.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

This helps to ensure reasonable quality control.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Out of date prescriptions would be made up and sight tests not carried out. The latter could lead to disease being missed.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

More chance of regular sight tests being carried out.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

As long as the generally worn optical appliances are fitted by a qualified individual, the problems of sports wear are not as great as they are not worn as much of the time and accurate measurements are generally not as important.

However, sports appliances still need to be regulated so that dangerous products are not fitted. This applies to all age groups.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See above

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not Answered

If yes, please give your reasons and provide any evidence to support these.:

The prescribing of low visual aids should have some regulation.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

- 1) Low visual aids - a lot of new technology has become available to help the visually impaired. It does not appear to be regulated.
- 2) Telephone appointments - some remote appointments could be helpful, for example a contact lens follow up or an appointment to discuss history and symptoms prior to the sight test.
- 3) Being able to discuss e.g. retinal photos with an ophthalmologist or optometric colleague. The issues around data protection need to be considered.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes - a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Increased use of technology can have both positive and negative impacts:

Positive - ability to send patients their own records, discuss pathology with colleagues, carry out remote appointments.

Negative - the scope of which parts of a sight test can be carried out need to be considered. A full sight test cannot be carried out safely without seeing the patient. Some people are not able to deal with technology.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Spitting up the sight test into its different components would need to be allowed.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

All the legislation is aimed towards the patients and consideration is not always given to the registrants. The GOC register is out of date in various aspect and does not consider the data protection of the members.

For example:

- 1) Part of the rules of registration 2005, para 21, talks about "his or its". This is very dated and should be changed.
- 2) By having the date of the registrants' most recent registration, for most, it gives users the approximate age of the registrant since most register a year after university. This date should be removed from the public view of the register.
- 3) Some of the language used in the register is difficult to understand. Clear English should be used throughout.

53 Are there any other gaps in regulation where you think legislative change might be required?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

See above

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Data protection of the members.

For example:

- 1) Part of the rules of registration 2005, para 21, talks about "his or its". This is very dated and should be changed.
- 2) By having the date of the registrants' most recent registration, for most, it gives users the approximate age of the registrant since most register a year after university. This date should be removed from the public view of the register.

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Sight tests and unsupervised dispensing or spectacle device manufacturing. Contact lens assessment.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

As 6.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Signing off current spectacle or contact lens prescriptions.

Giving unqualified advice

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Cataract, Diabetic, Glaucoma, Low Vision, Minor eye Conditions (CUES), IP, Learning Difficulties. All should have GOC accreditation.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

All aspects of refraction especially including Binocular vision assessment needs a fuller accreditation which at present is only acquired by a qualified Optometrist.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Maintaining a level of Professional responsibility to the patient by a qualified Optometrist.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The equivalent of asking an Optometrist to perform local anaesthetic cataract surgery. Optometrists should perform full and safe sight tests. Dispensing opticians should perform all professional aspects of Dispensing safely to the public.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

I believe that the fitting of contact lenses should be done by a qualified contact lens accredited optician.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Performed by accountable safe to practice registered opticians

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

To u16 and visually impaired.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Maintains the duty of care by registered accountable opticians

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Qualified professional registered Opticians

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Contact lens professional practice needs to be done by a qualified trained practitioner.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Needs to be accurate and accountable for safe practice.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Unsafe practice

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Again by qualified practitioners that can be accountable and give a professional qualified service of care.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Apart from bandage contact lenses and unregulated coloured contact lenses there is no reason that a qualified practitioner should sell Plano lenses

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Yes if the Px abused or misused the product

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

The practitioner cannot be held responsible for Px error or abuse

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

To make sure that the practitioner is protected as well as the Px.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Checking for pathology and diagnosing conditions, refraction and prescription of spectacles. Fitting and supply of contact lenses. Supplying spectacles to certain categories of patients.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction and prescription of glasses

Fitting and aftercare of contact lenses

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Supply of ready made glasses should be under a form of supervision.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Some further qualifications for optometrists participating in shared care schemes such as glaucoma, to offer a level of protection for those registrants.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

The supply of plano cosmetic contact lenses is rife across party shops, etc, and there appears to be very little that the GOC can do in these circumstances, which puts patients at risk.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

This could allow better service and better use of qualified staff in practice in situations such as re-checks and dispensing issues. But I do not feel that refraction should in any way be separated from the health check element of the eye examination, so there should always be a requirement for the health to be checked recently by an optometrist if any refraction is performed by another registrant.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Has potential to allow for better use of qualified professionals in store, so optometrists could perform more health screenings and checks on behalf of the hospital, while still allowing the stores to provide the refraction element.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There is a likelihood that patients can continue to wear inappropriate correction for many years, without checks for any pathology. Patients could be driving with glasses that are not suitable to meet the vision requirements, which is a safety concern. Also, patients could have conditions such as glaucoma that would remain undetected for a long time, and have financial and social implications.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

A risk of children wearing inappropriate devices with either poor fit, or poor refractive correction.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/A

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

In my opinion, remote care can be useful to provide care to patients at their own convenience, so they may be more likely to attend regular appointments. However, without a full remote set up, there is very limited care that can be provided from an eyecare point of view, as a lot of care requires some physical examination, so I feel care is needed when it comes to patient selection and suitability for this service.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

N/a

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

The Act seems powerless to deal with sale of optical appliances outside of the UK, and I feel with increasingly a global market there should be tighter regulations on suppliers outside of the UK for patient safety.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

No.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Prevented:

Fundoscopy/ophthalmoscopy, indirect/direct

Refraction

Slit lamp biomicroscopy

Emergency appointments

Prescribing prisms

Dispensing contact lenses

Contact lens aftercare

Restricted:

Performing with correct training : visual fields, OCT, Optomap, non contact tonometry, contact lens teaches

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Fundoscopy/ophthalmoscopy, indirect/direct

Refraction

Slit lamp biomicroscopy

Emergency appointments

Prescribing prisms

Dispensing contact lenses

Contact lens aftercare

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Assessing findings of:
Visual fields, OCT, Optomap

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

Shared care of
macular changes
Glaucoma/suspect glaucoma
Diabetic retina

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Visual acuity following a refraction is dependent on the health of the eye and both should be considered together during an eye examination by one practitioner- the optometrist

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Vulnerable people may have disabilities with abnormal head posture and require a professional to dispense

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Vulnerable people may have disabilities with abnormal head posture and require a professional to dispense

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Vital advice may not be passed on to the px.
Record keeping of advice may not be as precise

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

A prescription may be written incorrectly
Last chance for optometrist to confirm it is correct

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Loophole allowing them to be sold in the uk without being fitted by a professional

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Not sure

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Not sure

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

NA

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/A

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

NA

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

NA

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

NA

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

No mention of ch as mgrs in technology

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

NA

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Business registrant/employer

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

[redacted]

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

We don't agree with the description of the objectives as non-hierarchical as this suggests that all objectives carry the same weight. the GOCs overriding statutory objective is to protect the public and this should be reflected in the GOCs approach. listing "maintaining public and patient safety" as one of the 8 non-hierarchical objectives suggests there could be a trade off between public protection and other considerations.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Testing of sight

Fitting contact lenses

Selling optical appliances to children under 16 and people registered as visually impaired

Selling all contact lenses including zero powered lenses

7 What activities do you think must be restricted to our registrants?

Please provide details.:

The dispensing and selling of optical appliances to people with learning disabilities, dementia and domiciliary care. Enhanced skills are required to supply to these patients

The treatment of myopia management and the supply of the specialised spectacle and contact lenses. the supply and treatment can go beyond the age of 16. hence not currently protected.

The supply of optical appliances to drivers. The incorrect fitting of spectacles especially in higher prescriptions will reduce vision which could cause harm to the wearer and others on the road.

The supply of safety spectacles, The incorrect fitting of spectacles especially in higher prescriptions will reduce vision which could cause harm to the wearer and others in the work place.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Optometrists should be restricted in dispensing Children under 16, unless they have undergone specialised training to the same level as DOs . An Optometrists training is insufficient.

Optometrists should be restricted to fit only soft contact lenses.

Gas permeable (hard) contact lenses and other specialised lenses, should only be allowed to be supplied following additional training. This is because the training was removed from an optometrist training syllabus.

Contact lens opticians have this training included in post-registration qualification.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

We agree that its important to have proportionate and consistent regulation for optical businesses

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

We believe that all businesses who provide sight testing and supply optical appliances should be registered with the GOC. the public should have the same level of protection wherever they choose to be tested and purchase spectacles.

This registration should include online sellers of optical appliances

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

Optical practices have GOS / NHS contracts which they adhere to. There is ongoing practice inspection by the NHS team.

The GOC also suggesting it should inspect is a duplication.

It is important to remember that the cost burden of any additional work undertaken by the GOC will fall on registrants and hence the public/patient

14 Is there an alternative model of business regulation that we should consider?

No

Please give your reasons and provide any evidence to support these.:

What we have in place works

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

The sight test function should not be split into 2 parts ie refraction and eye health check. Many patients come for new specs and only perceive that they need refraction, but the sight test discovers pathology that would go undetected.

Parts of the eye test are already delegated ie field tests, fundus photography, interocular pressures, OCT and auto refraction. This saves the optometrist much time.

DOs performing refraction is no different than any of these other delegated functions.

Also having a DO performing refraction is better than an auto refractor, because the DO is able to ask pre test questions and interpret the results, having an in-depth knowledge of eye health and pathology they can interact and not prescribe but refer to the optometrist for further investigation. Auto refractors cannot do this!

However it would be helpful to be able to refract a patient when they want new spectacles ie 6 months after the last eye test, just to confirm that if the specs are made up to the latest prescription, nothing has changed in the short time period. But the NHS won't fund early sight tests unless the patient is having problems. Stand alone refraction would be helpful to patients in between regular eye tests. Only if provided by a registrant who has the skills to understand if the patient indicates any concerns or the refraction is a poor result ie a sudden reduction in vision. A DO has the skill to understand if these factors are of concern and would be able to refer to an optometrist for further investigation.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

With secondary care wanting to transfer 33% of eye patients into primary care, these patients can only be seen by an optometrist in most cases. Primary care cannot cope or survive with this high level of patients which in most cases need eye care and not eyewear

GOS and NHS services are very poorly paid

Just over £22 for a sight test as one example. A car MOT cost £54. Unfortunately optical practices need to sell Specs and contact lenses to survive.

Hence we need all the practice team to be able to support the optometrist.

With the level of training and skills that DOs have and they are registered, the DO is best placed to perform refraction and other delegated functions

Also DOs refracting would free up valuable optometrist time enabling them to see considerably more urgent eye health issues referred from secondary care or walk through our doors. This model would provide a faster service for patients which will reduce the number of avoidable sight loss

This would be a similar model to hospital eye care, where a patient goes through a process of screening, ie fields and OCT with an appropriately trained technician, an optometrist who refracts the patient and finally they see the ophthalmologist

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Enabling DOs to support optometrists in carrying out a sight test would enable patients care to be provided in a more flexible way, while upholding the principle that a sight test should involve both refraction and eye health examination.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

We see no disadvantages

The big advantage is that the patient is able to see the suitably qualified ECP for each part of the eye test

The current restrictions produces waiting lists for all types of patients including those with sight threatening conditions. The delegation of refraction, frees up the optometrists time to see these urgent patients, reducing preventable sight loss

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

estimate 15% in our practices

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

We don't know that there is such data available

Would need to look outside the UK for this information

In many countries the term Optometrist is used for a person with a qualification similar to a DO

Also the term Optician is commonly used for both DOs and Optometrists

In many counties including Europe the Optometrist or Optician provides refraction only in practice and the eye health check is provided by an Ophthalmologist.

ABDO teaches refraction in several overseas countries including Malaysia where DOs have an additional qualification in refraction and provide refraction in practice.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Zero power lenses need to be fitted like all other lenses. hence the supply of zero power lenses should not only be restricted but it should state that they needed to be fitted by a CLO, Optometrist or OMP

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

i see no disadvantages leaving legislation as it is

If legislation was removed and people could buy contact lenses without fitting and regular eyecare/aftercare there is an increased risk of eye conditions and preventable sight loss. Along with self selection of the contact lens power, which could increase harm to the wearer and others especially in the work place and driving.

Online retailers should be ensuring all who order from them are receiving regular aftercare and routine eye tests along with providing a route for this service

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

The dispensing and selling of optical appliances to people with learning disabilities, dementia and domiciliary care. Enhanced skills are required to supply to these patients

The treatment of myopia management and the supply of the specialised spectacle and contact lenses. the supply and treatment can go beyond the age of 16. hence not currently protected (Contact lenses are protected)

The supply of optical appliances to drivers. The incorrect fitting of spectacles especially in higher prescriptions will reduce vision which could cause harm to the wearer and others on the road.

The supply of safety spectacles, The incorrect fitting of spectacles especially in higher prescriptions will reduce vision which could cause harm to the wearer and others in the work place.

Sports eyewear, including swimming goggles, sports goggles and diving masks, the visual performance of these appliances is greatly compromised if the prescription is not modified to take into account that many of these appliance fit in a different position to spectacles or the prescribers trial frame. Sports wear is often used for a variety of very dangerous sports and the consequences of poor vision could be life threatening

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protecting people with learning disabilities, dementia and those needing domiciliary care.

Protecting young adults

Preventing injury and saving lives of drivers and those needing safety spectacles and the public who are affected by those who wear inappropriate and poorly fitting optical appliances

Preventing injury and saving lives of patient engaged in sport, along with improving their performance,
Its not public protection but the UK could win more sporting events if our sports people had well corrected vision!

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

The current Legislation is required to protect the public

BUT it should be acceptable for a patient to provide an electronic copy of their in date contact lens specification without the need for this to be verified, provided this can be read clearly and written in a format recognised in the UK.

However we don't agree with the GOCs view that the requirement to verify the particulars of a specification should be removed as this would potentially enable contact lenses to be sold without the patient having an in date specification and therefore without receiving appropriate aftercare

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

without current restrictions, eye health and vision would be at risk
while overseas there is no protection, this is only a small number of patients.
millions more would be put at risk

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Its a function registrants have always performed. It is not an issue to retain

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Removal would be harmful to eye health and vision.
Increases risk of the wrong prescription, fit and material being supplied

29 Do you think the Act should specify a definition of aftercare?

No

If yes, please specify what you think the definition of aftercare should be.:

It should be left to the professional judgment of the eye care professional and registrant. to decide what aftercare is appropriate for each individual patient.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The current legislation is necessary to protect the public

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Removing the legislation would increase the risk of eye health problem along with undetected visual impairment. putting a zero powered contact lens onto the surface of the eye can have an optical effect and reduce vision.

The incorrect fitting lens and wrong material can result in damage to the eye health including blindness.

Without the correct instruction in insertion, removal and care of contact lenses can result in eye health issues including blindness.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Putting a zero powered contact lens onto the surface of the eye can have an optical effect and reduce vision.

The incorrect fitting lens and wrong material can result in damage to the eye health including blindness.

Without the correct instruction in insertion, removal and care of contact lenses can result in eye health issues including blindness.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage, public protection, good eye health and vision

Disadvantage, no public protection, poor vision, potential blindness

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Patients already have have massive choice where they can purchase optical appliances.

Further relaxing of regulation can only lead to less public protection

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Less public protection. poor vision

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

inappropriate optical appliances causes poor vision, in the case of children this can cause impaired vision for life!

Poor vision causes harm to the wearer and other

Registered ECPs understand when something is wrong when providing optical appliances that requires further investigation

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

Much can change in eye health and vision in 2 years
regular eye tests are essential to maintain good vision healthy eyes

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage, poor public protection, poor vision and harm to wearer and others, poor eye health, blindness
Advantages None

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage, good eye health and vision
Disadvantage none

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

inappropriately fitted sports eye wear can cause poor vision and can harm eye development causing reduced vision for life.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage none
Disadvantage, poor vision and harm to eye health development causing reduced vision for life

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage, good vision, good eye health development, well fitting appliances, better performance in sport
Disadvantage, None

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

protection of the vulnerable patients needs to be included

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage Public protection, good vision and eye health
Disadvantage, No protection of Vulnerable patient

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

none

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

technology can be used to enhance and increase efficiency of patient care.

BUT it is essential that the technology is used appropriately by only registered dispensing opticians and optometrists or optical businesses. To ensure public health standards are maintained.

If diagnoses is made outside the UK this should be done only by a UK qualified and regulated eye care professional

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Future concerns are online refraction.

current regulations need to be in place with further appropriate restrictions to maintain public protection

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Don't Know

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

no

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

It is impossible to supply spectacles on line that are accurately made and fit for purpose.

You need a face to measure and a face to fit the spectacles to.

Its the same as trying to obtain a made for measure item of clothing without having the body to fit to.

Concerningly improper measured spectacles an incorrectly fitting spectacles produce uncomfortable vision and reduced vision.

These factors could be harmful to the patient and others. I.E vision falling below driving standards

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Ensure the on line seller uses an registered ECP to measure and fit spectacles at a registered practice. and provides realistic fees for the service

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

The GOC is underestimating the knowledge of optometrists and how that knowledge is used in a seemingly unimportant part of an eye exam

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Eye exam - of all classes of patient

Refraction

Contact lens fitting

Contact lens review

Monitoring of eye conditions

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Eye exam - of all classes of patient

Refraction

Contact lens fitting

Contact lens review

Monitoring of eye conditions

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Some places may employ registered opticians but do not have appropriate equipment for adequate sight testing or state that an optometrist oversees various functions when in fact there is no such person on the premises

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

A change in refraction could indicate pathology - if a DO is refracting alone in a practice then there is a reasonable danger that the px is not referred properly or seen by an optometrist in a timely manner. Also pxs may go years and years having a refraction only and no full eye examination and pathology could be missed - pxs don't understand what optometrists do at the best of times - this just adds another complicated layer we can do without - only financially motivated

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

If DOs can refraction practices will want only to employ income generating DOs with a token optometrist who will be paid badly and be poorly motivated Services to pxs will be downgraded rather than improved

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Pxs get a full eye examination which encompasses all they need for good eye care.

There are no disadvantages

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

My role as an optometrist is to preserve sight - current regulations enable this

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Pxs eye health should be protected

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Risk of harm if pxs are supplied with incorrect lenses

Risk of harm if pxs not given the correct information on safe wear and care

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Risk of harm if incorrect lenses given

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Px eye health needs to be protected

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

No

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There is a real danger of people doing tasks that they are not properly corrected to do
Eg driving, using computer (where input errors have serious consequences)

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Maintaining health & safety of the population at large

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

I am not aware that the goc does any inspections on companies that claim an optometrist oversees online contact lens sales or whether online spectacle sales are actually dispensed to children

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Inspection by the goc in person- online companies should have a licence to allow them to operate specifically as online which they have to pay for

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction

Medical diagnosis

Treatment

Selling optical products such as contact lenses or spectacles to prescription both online and in premises

7 What activities do you think must be restricted to our registrants?

Please provide details.:

As above

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Strict control of online supplies

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

Financial

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Prescribing behaviour both in terms of clinicians and practice. E.g over prescribing of optical appliances and pressure on optometrists to prescribe where not clinically necessary.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Optometrists could extend their roles in managing disease

Could be financial loss to optometrists - particularly independent practices.

Public would need to be required to have a medical eye exam by an optometrist as part of a 2 tier system every 1-2 yrs. Refraction would be separated but would require an optometrist's 'supervision'.

Risk of abuse where corporates would pressure refractionists to over prescribe.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protects public from retail opticians over prescribing

Protects public health as public understanding of a sight test is inclusive of a health check. Separating will lead to rise in missed medical eye appointments.

Disadvantage is that a sight test is too broad a definition. It is restrictive professionally in extending roles of specialist services in the community.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Would have to extract this from our database but in our practices it is likely significant as we are a community practice.

Some has reduced due to MECS and IP

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

I would advise looking at other countries where refraction is delegated but under the supervision of an optometrist. Eg USA where opticians can refract under optometric supervision.

Refraction should be within the supervision of an optometrist, however optometrists should be able to delegate to a dispensing optician.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Contact lenses is a broad term. Speciality lenses for Keratoconus, dry eye and post operative Ely require a different skill set. These should only be specific to optometrists.

Regular soft contact lenses require a lower skill set but require professional assessment for suitability and compliance. There is research that shows non supervised care results in higher microbial keratitis.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

those with VA below 6/6

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and

equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If sale and supply is not restricted there is a health risk of not investigating vision loss.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Rarely is this rule implemented or even enforced.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Assessment of vision

Assessment of anterior ocular health

Assessment of fit of lens

Communicating options

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

No contact lenses should be supplied without registration

They are a health risk if not supervised. It is ridiculous that a non prescription product is not regulated. The prescription is irrelevant.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Zero powered lenses must be regulated

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

They cause infections, encourage poor compliance

Imports from unregulated suppliers.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Infection

More hospital admissions

Permanent Vision loss

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Reduction in eye exams

Delayed diagnosis of asymptomatic conditions eg glaucoma, cataract

Financial loss to practices

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Poor compliance

Proper fitting and measurement could affect muscle balance

Increase in myopia is a global problem, interaction with an eye care professional for advice is important

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Continued protection of the public

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

NHSX referral system

Cloud based image applications - various providers

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Main issue enforcement. The GOC must enforce illegal suppliers particularly off shore

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Requires a longer discussion

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Student optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

The dispensing optician should carry out a refraction.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

All optical skills.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

The optometrists should do what they have always been doing, such as the refraction.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

no

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

No

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

No

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Dispensing opticians should not refract.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

h

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

g

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

n

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

No

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

g

29 Do you think the Act should specify a definition of aftercare?

No

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

No

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

g

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

g

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

No

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

f

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

f

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

g

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

g

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

f

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

g

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

f

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

7 What activities do you think must be restricted to our registrants?

Please provide details.:

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above
and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not Answered

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The GOC I'm sure is aware of the ^[redacted] business model which uses remote overseas 'opticians' to perform a sight test. Despite the fact that a UK optometrist 'verifies' an already purchased prescription, without doubt the initial 'sight test' gives the patient the impression that they have had an eye examination. Clearly this is not to a GOC/ college of optometrists standard and likely discourages such patients from seeking a full eye health check as they wrongly assume they have had an 'eye test'

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

There needs to be clear clarification as to what can be done remotely

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

With changes to the NHS contract in Wales imminent, there is an agenda to push the scope of practice of Optometrists in Wales. Is the GOC set up for such national variations eg fitness to practice procedures?

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

With changes to the NHS contract in Wales imminent, there is an agenda to push the scope of practice of Optometrists in Wales. Is the GOC set up for such national variations eg fitness to practice procedures?

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

3 Which category best describes you?

Contact lens optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Selling specs to the below groups

Safety specs

Complex prescription

U 16

Sight impaired and several sight impaired

Selling contact lenses

Fitting all contact lenses includes zero powered lenses

Performing eye examinations

Provide eye care advise such as triage without supervision

7 What activities do you think must be restricted to our registrants?

Please provide details.:

All the above

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Safety specs
Complex prescription over + or - 5D in any meridian

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Online suppliers regardless of base location if supply to UK should be forced to obey UK law

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – with no restrictions

Please give your reasons and provide any evidence to support these.:

But DO would need to have done the refraction top up qualification any only if ophthalmology has been performed in the last 2 years

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Free up time for optometrist to perform EOS services
Reduce the risk of non tolerance to prescription
Allow more frequently vision checks without the need for a full eye examination

Allow the public to see the relation of spectacle prescription to the ocular appliance

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

With more eye care coming to the local optometrist this could lead to longer waiting times for patients to be seen and potential sight threatening conditions like glaucoma not being detected due to wait times for a current eye exam and refraction test
Having DO being able to do refraction will allow more clinical time to be free

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None as it currently works the need for an in-date eye exam and have lenses fitted by a qualified practitioner work and keep the patients safe

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Safety specs - need to have understand of importance of lens materials etc
Complex prescription this needs to go back to relay later dispensing as these patients can have reduced vision and poorly fitting frames and optical centres can reduce the vision further

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantages would be to provide better eye care to those groups
Disadvantage the patient would need to be seen in an optical practice not purchase online

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Corneal abrasion corneal ulcers would be seen more due to poor handling and teaching methods
The arterial eye health would not be as valued as it is currently

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Online suppliers currently don't ask for verification and swap branded lenses at will saying their lens is the same as xx lens
This has potential visual issues and ocular health implications

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

An maximum time of 12 months between appointments with a qualified practitioner to assess the vision, fit and condition of the contact lens and anterior eye health

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

More people will be attending practices and HES with lenses stuck in eyes no guarantee of materials standards to be used

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Action can be taken against those whom break the law

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

N/a

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Spectacles need to be manufactured and verified to a prescription dispensed and checked by a qualified person

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

How would you feel if your child was killed by a driver whom punched specs from a refraction over two years old

This is why only qualified professional DO or OO, CLO should be able to author this and under exception with justifiable reasons such as patient has been in HES lost specs unable to come for eye examination due to being bedbound needs specs for watching tv and reading while recovering

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Children eyes are developing still so must be seen by qualified only

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

How can you check ocular health on a video call simple answer you can't

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

N/a

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

All suppliers must have a signed copy of the specifications and only supply when they have this also not be able to subtitle contact lenses for a different brand.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

More requirements to get all not just uk based supplier if they sell to the uk they must abide by the uk law and conviction to those that don't. Run random checks for compliance. Make all online suppliers register with the GOC as well

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction. As this is definitely going to be exploited by the franchises and multiples who only care about cheap labour, sales targets and converting sight tests to selling glasses in order to increase their dividends. Also the splitting of the refraction from the eye health check leaves the public unchecked/vulnerable to undiagnosed eye conditions.

At present having this tied together is in the public's best interest.

Eye health checks.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction and advice on glasses prescriptions and contact lenses and on any change in prescription. This is open to exploitation by businesses and one wonders if that's where this whole consultation has grown from.

Eye health checks, diagnoses and monitoring.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Yes all as currently. There is no reason to take these activities away from registrants.

The only reason this is being pushed and suggested is so cheaper labour, easier to manipulate labour can be used to sell glasses and exploit the public.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

100% if the GOC truly cares about the public.

14 Is there an alternative model of business regulation that we should consider?

No

Please give your reasons and provide any evidence to support these.:

The only call for change and deregulation is from big business to increase profits. This and the apprenticeship.

Deregulation, cheap labour, exploit public, increase profits.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Absolutely not. This would be exploited and not adhered to. The sight examination is also used to detect changes in health of the eye.

As an Optometrist the nuances of refraction, history, and eye health past and future go together.

This would not be in the public's interest.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality,

diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Dispensing opticians are not trained to refract or to tie this in with eye health.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The public remain protected by having the sight test by a competently qualified and registered optometrist who is able to tie this in with eye health.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

Is this a sick joke?

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Examination difficult. Many patients have to be seen anyway

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

I feel this is completely the wrong direction for the profession

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Optometrist should be the only ones to refract also the online market place is killing Optical practices. The GOC should be looking to regulate online.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Prescribing and dispensing glasses.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Selling glasses online, patients are not coming in for checks as they get the glasses online. This leads to conditions being missed.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

No

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

The only advantage would be to businesses who would get rid of optometrists as it will be cheaper to have DOs

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It protects the public however I feel the GOC are not protecting the profession.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Via [redacted] clinical outcome report

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

By keeping it to professionals it allows a safety for patients although this is a barrier it helps prevent issues for patients.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It will vulnerable groups to be treated properly

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It helps make sure patients get the right lenses.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Making it illegal to stop unqualified organisations performing this.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The regulations are not fit for purpose.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

No

Please give your reasons and provide any evidence to support these.:

People can buy online without a test

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Good for businesses bad for patients as they won't get a health check

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Makes sure patients get health check however patients will more likely buy online rather than get test.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

Regulate the online market place

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Online market place

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Eye examinations which include eye health and refraction.
Supplying optical appliances to under 16.
Supplying and fitting of contact lenses.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Optometrist:- eye health examination , refraction, fit and supply both spectacles and contact lenses.
Contact lens dispensing option:- fit and supply contact lenses and spectacles.
Dispensing Optician :- fit and supply spectacles

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:

Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

The refraction is part and parcel of the whole eye examination and is taken into account once the health has been established. It is bad enough that many Optometrists don't routinely perform Retinoscopy on children and rely upon the Auto refractor and tend to under plus or over minus. I have recorded many instances in my diaries over the past few years.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

See question 15

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

See question 15

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantage is that there is one person held accountable for health and refraction and that is the Optometrist.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As with Optometrists, a qualified contact lens fitter has been examined on both the health aspect and the correct fitting and supply of lenses.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Health aspect , you are placing an alien object onto the cornea of someone's eyes.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

A health examination of the eye on a regular basis

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Eye conditions

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Technology yes but remote care a definite no, just ask your patients who needed to be seen by a GP during COVID and could only get a phone consultation with a guess to diagnosis.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Answers to question 8 below

7 What activities do you think must be restricted to our registrants?

Please provide details.:

See answers to q8 below

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Sight testing should remain the responsibility of the Optometrist. Allowing dispensers to refract will lead to inconsistent care with ultimately poor patient outcomes and satisfaction.

The nature of certain ocular diseases affecting refraction (cataracts,diabetes, AMD, etc) mean the optometrist is best placed to detect , refer and monitor this whilst undertaking refraction themselves- delegating this would lead to inaccuracies, undetected pathology and ultimately complaints.

The testing of refraction requires intense training which spans different aspects - ocular systemic disease, binocular vision status, etc, which require optometry training.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Advantages are not many at all, if any.

Disadvantages are many, some listed in answer 15. Clinical care should remain the responsibility of the qualified Optometrist, not the DO. A result of amending refraction is the inconsistent care provided to patients, ultimately leading to time delays, inaccuracies and complaints. Refraction is part of the sight test and should remain so.

Timewastage is another disadvantage whereby optometrists will be checking and rechecking the refraction errors of the DO. This will be an added financial burden on the practice and patient.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantages of the current sight test legislation outweigh its disadvantages.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

When speaking with colleagues we agree that to separate the refraction of the sight test would be problematic for us as practitioners but also the patient. It is best to leave the two aspects together in the sight test for the qualified optometrist to undertake.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Fitting of contact lenses requires a deeper knowledge of refraction especially in presbyopes and myopia changing children. Thus the optometrist is well placed to do this since they have a better knowledge and training regarding the pathological aspects of this. Hence the advantages of leaving the legislation as it is overrides the disadvantages.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

No, it is in the patients best interests to keep this under current legislation.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Patients would not be seen in a timely manner, especially if having pathology which was being monitored by an optometrist, especially an independent optometrist. Perhaps the IP optometrist was monitoring an eye condition they were treating. Also if the optometrist was undertaking myopia control using contact lenses then this would be compromised if this legislation was changed especially since the optometrist would be responsible for the overarching management of this refractive treatment.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Removing this legislation would downgrade the professional standards of the profession. This would lead to haphazard prescribing and ultimately risk to patient safety.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

There should be greater consistency in defining an aftercare, especially the time intervals of these checks.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Zero powered legislation should be the same as prescription contact lenses.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

N/a

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Inconsistencies, errors and ocular health risks since patients would go beyond the two Yr gap thereby delaying detection, referral and treatment of pathology,

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This should remain under a registered optometrist or dispensing optician.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Coloured and coloured contact lenses.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

Yes

[redacted]

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction, CI work. Dispensing restricted groups

7 What activities do you think must be restricted to our registrants?

Please provide details.:

CI fitting. Fundoscopy, interpretation of Oct fields etc

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes - under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Risk of inadequate supervision. Pressure from corporate sector to allow as cheaper staff

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction, clinical examination of eyes, dispensing of spectacles without supervision by a qualified and registered practitioner, fitting and supply of contact lenses.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction, clinical examination of eyes, dispensing of spectacles, fitting and supply of contact lenses.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

not sure

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Refraction, alongside the clinical examination of the eye to check for signs of disease must remain connected as there are aspects of both which are vital to fully informing the outcome of the "sight test".

Patients are frequently unaware of clinical issues or pathology - a refraction only sight test would miss these cases leading to damage, blame, legal cases etc.

Optometrists are trained and qualified to consider all the information as a whole and take responsibility for the decision made.

Separating the 2 elements would lead to failings, misdiagnosis and missed opportunities to detect signs of disease.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Advantages - None

Disadvantages -

Separating refraction from clinical examination would lead to failings, misdiagnosis and missed opportunities to detect signs of disease.

Misdiagnosis could lead to damage, negligence claims etc.

The current GOS funding, whilst inadequate for the current sight test would be rendered inappropriate for a split / delegated eye examination

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It is well regulated at present, protecting the patient and ensuring a high quality of eye care is delivered

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

data exists: ie: the number of GOS sight tests performed is available from PCSE and the number of optometrist referrals is available from individual NHS trusts.

Unavailable data will be the number of private sight tests performed and the number of referrals made to private medical practitioners outside of the NHS.

My personal view is that between 5 and 10% of my clientele require referral via various routes and that I spend upto 20% of my working day dealing with referrals and associated correspondence.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Fitting of contact lenses must remain the sole domain of qualified and registered Opticians / practitioners.

Significant harm can occur to individuals if contact lens fitting and supply is not regulated and supervised.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

sale and supply of Rx contact lenses should remain a regulated and controlled activity

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Contact lens supply should be regulated to ensure suitability, compliance and supply of authentic and quality products. Unregulated supply allows problems to go unnoticed and diminishes the importance of eye health care in the public.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Legislative requirements ??

Most online contact lens suppliers completely ignore the need for verification of contact lens specifications when supplying direct to the public.

There are countless times in my practice where patients have received on-line contact supply with no information whatsoever from a qualified contact lens practitioner

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This requirement is completely flouted by many on-line suppliers of contact lenses. The regulation needs to be enforced - lack of compliance should result in suspending that organisations ability to supply.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Aftercare should entail the annual verification by a Qualified and registered Optical professional of the fit and suitability of the lens in situ, an assessment of the health of the front of the eye in relation to the wearing of contact lenses and a signed, dated copy of the specifications which effectively authorises the user to continue in this way for a maximum of 12 months.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

There is a mass of information about types and suitability of optical appliances which can cause harm if inappropriately supplied. Qualified suppliers are trained, regulated and conduct CPD to ensure that correct and appropriate advice is given and responsibility taken where mistakes are made.

This is entirely in the best interest of the public

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

Patients do not always realise when their eyes are not functioning correctly. Any regulation to encourage a regular refraction / eye health check should be encouraged and removal of this restriction would lead to harm in some cases.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Unregulated suppliers do not take any clinical responsibility for their customers and would welcome the removal of the 2 year restriction for commercial gain. Non-enforcement of a 2 year prescription would lead to harm in some cases.

Registered eyecare practitioners take responsibility for their actions and do care for their patients. The 2 year restriction helps to ensure appropriate, safe, continuity of care.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

it should be appropriately regulated

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Potential for eye injury, damage, harm.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not Answered

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Ensuring that contact lens suppliers comply with the regulation to see evidence of a contact lens aftercare would be a good start.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

There needs to be more insight into the poor and variable quality of optometrists in England. There needs to be a more standardised practice (like Scotland) as English optometry delivery is so variable from CCG to CCG.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

The should NOT be

Providing contact lenses

Providing any type of optical appliance

Providing any type of eye care/sight testing

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Any kind of action involving the eye, correction of sight or eye health assessment

Contact lens and spectacle dispensing should be limited to those with a qualification and registration.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Vision screening for drivers.

All drivers should have to have a sight test to learn to drive and at regular intervals to maintain their driving license

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

Businesses play fast and loose with the regulations knowing that they can get away with things!

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Having done practice visits during my job and spoken to other optometrists it's concerning how non optical manager and regional teams dictate on professional matters they have no understanding of.

An opticians is no different to a shop that sells handbags ...I was informed by one regional manager at [redacted] I left soon after!

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

It's impossible to know if your refraction end point is complete without understanding eye health.

Patients would consider that their glasses are ok as a sign of good eye health meaning eye diseases were more progressed when diagnosed and then cause a massive cost implication to the NHS when these advanced problems need sorting

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

OMP shouldn't be allowed unless they show training. They're generally hopeless
There should be more needs led examination and less sight testing similar to the Scottish primary and supplementary examinations

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Ensure a full service for the patient /
So that all their eye health requirements are dealt with in one appointment.
There should be tiered and different types of appointment so that a needs led assessment is encouraged

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

I work in a triage clinic where we see any routine referral coming from primary care instead of them going to HEs.
We generally discharge 75% of those referrals as they don't need secondary care they just need a competent optom with enough time to fully investigate the issue rather than referring because they don't want to get sued

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

It needs to be stricter regarded supply

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Everyone

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients need to ensure they can see if their prescription to ensure they don't cause harm to others

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

A patients son was provided with -6DS swimming goggle instead of +6DS when purchased on [redacted] ...the child is 6 and there was nothing about patient age or how the order would be verified

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See above

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Getting a patient to measure their own PD prior to buying glasses on line? Need I say more!

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

As an organisation in place to protect the public's best interest, there should be no consideration of allowing separation of refraction from eye health assessment, the two are inseparable.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Eye health assessment, refraction, contact lens prescribing/recommending, and spectacle prescribing. These should be performed by optometrists only.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Eye health assessment, refraction, contact lens prescribing/recommending, and spectacle prescribing should be carried out by optometrists only. Dispensing of contact lenses should be restricted to GOC registered practices, not online retailers based outside the UK who have openly provided contact lenses to UK residents without prescription.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Patients with higher or more complicated prescriptions (ie high prescription, anisometropia, high astigmatism, those with reduced vision but not classified as low vision) would benefit by seeing a qualified dispensing optician. The lay member of the public is not aware there are separate qualifications for dispensing, nor are they made aware if the individual dispensing their spectacles is a qualified dispensing optician. From having worked in both independents and multiples, I have unfortunately come across many optical assistants who lack the necessary skills, understanding, and of course training, to appropriately dispense individuals with even slightly complicated prescriptions. It is not in the public's best interest to continue in this manner, it results in many rechecks and remakes of spectacles both wasting their time and causing them to lose confidence in the competence of individuals who work within the optical sector.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

Could not find details on this on the GOC website

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

Likely there will be large impacts to any changes to regulation, unfortunately this information is not easily found on the GOC website.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

The GOC could more effectively regulate by monitoring how many registered members of staff are within an optical practice vs unqualified, and investigating the practices where the majority of work is carried out by unregistered individuals. The GOC could also regulate by addressing online sales of spectacles and contact lenses.

14 Is there an alternative model of business regulation that we should consider?

Yes, another model (please specify)

Please give your reasons and provide any evidence to support these.:

The optical sector needs the current Opticians Act to be enforced first. Currently there are online contact lens sales without valid contact lens prescriptions, online spectacle sales for individuals under 16. If anything there needs to be more strict regulations, this would be in the best interest of the public's health and safety.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Absolutely not. Refraction and eye health assessment are inseparable. A hyperopic shift may indicate oedema within the eye, a sudden change could indicate diabetic change, variable vision could indicate anterior eye conditions, distorted vision could indicate macular degeneration, being able to achieve good visual acuity but complaints of poor quality of vision could indicate cataracts or fuchs dystrophy, the list goes on! Optometrists gain so much valuable information from listening to patient's during refraction, information that is not necessarily disclosed during even a thorough case history.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Please see negative impacts listed in response to question 15.

There should be no consideration of financial gain for business owners in this discussion, it is not in the public's best interest. The GOC should prioritise patient care over the bottom line of their registrants.

Financial impacts for patients should not be a consideration in this discussion as the NHS offers vouchers for sight tests and vouchers for those in need of financial support.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Refraction and eye health assessment are inseparable, see reasons listed in response to question 15.

The only advantage to this would be for corporations profit. The disadvantages are immense and against patient's best interest.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients would continue to receive adequate care, as they expect when they enter an optical practice.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

This would be largely variable but can be obtained through electronic systems for record keeping. Having worked in both independents and multiples, I would suggest looking into the percentage of patients referred separately between these two types of practices. I imagine you will see a difference as optometrists in larger corporations are not given adequate time to perform a thorough eye health assessment, which likely results in more referrals, putting unnecessary strain on the NHS.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

It needs to be regulated as it is, currently the Opticians Act does not stop online sales to those without valid contact lens prescriptions.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Protects patients eye health, which should always be the main priority. Current legislation needs to be enforced, it currently is not.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Patients with higher or more complicated prescriptions (ie high prescription, anisometropia, high astigmatism, those with reduced vision but not classified as low vision) would benefit by seeing a qualified dispensing optician.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The lay member of the public is not aware there are separate qualifications for dispensing, nor are they made aware if the individual dispensing their spectacles is a qualified dispensing optician. From having worked in both independents and multiples, I have unfortunately come across many optical assistants who lack the necessary skills, understanding, and of course training, to appropriately dispense individuals with even slightly complicated prescriptions. It is not in the public's best interest to continue in this manner, it results in many rechecks and remakes (a financial impact) of spectacles both wasting their time and causing them to lose confidence in the competence of individuals who work within the optical sector.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

These are necessary barriers which are not currently enforced, and ultimately patients are the ones to suffer from this.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Absolutely, we currently see issues in practice from the current legislation not being enforced.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

This is necessary for patient safety. Please find ways to enforce current legislation.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients will use a medical device not prescribed for them, we already see issues arising from this within practice as current legislation is not enforced.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

An aftercare includes a physical assessment of anterior eye health, which cannot be performed via telephone or video call. This is not a virtual assessment. An aftercare includes a visual assessment and over refraction. An aftercare includes review of patients contact lens care habits to prevent future complications.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

It is necessary for patient safety and current legislation needs to be enforced.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Absolutely, many zero powered contact lenses sold to UK residents are without prescription and are not suitable for use (do not have adequate oxygen permeability, are not safe materials to wear). The current legislation surrounding this needs to be enforced.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Yes, please find ways to enforce this, it is in patient's best interest.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

An advantage would be patient safety, please enforce current legislation.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

No, if anything there should be more strict legislation surrounding this. Patients do not make an informed decision about whether they are dispensed by a qualified individual or not.

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

If dispensing opticians were not required for dispensing, errors could easily be made. Incorrect centration induces prismatic effects. Anisometropia, high astigmatism, and other complicated prescriptions require more fitting measurements which unqualified individuals are either unaware of, or not trained to measure. There should be more strict legislation surrounding this as it is possible for even under 16s and those with low vision to purchase optical appliances online.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Absolutely. Consumers are not given the option to make an informed decision as to who they are dispensed by in practice, qualified dispensing optician or not. Optical assistant often lack training to know which measurements are necessary for complicated prescriptions. Even worse, when purchasing spectacles online, these measurements are completely omitted. If these measurements were not important, the GOC would not have any required competencies for dispensing opticians to complete before becoming registered.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

A lot can change with prescription and eye health each year.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Unless there is an emergency (a patient's only pair of spectacles breaking and us producing a replica pair) there should be no other exceptions. A lot can change with prescription and eye health in two years, some health changes being asymptomatic.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients continue to receive adequate eye care.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Children's eyes are still developing, it is essential they are dispensed by a GOC qualified professional.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Prism could be induced if lenses are not centred correctly, causing muscle imbalance. There could be errors calculating best vision sphere, reducing visual acuity, potentially contributing to myopic shift or amblyopia. Children's eyes are still developing, it is essential they receive adequate care.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It is essential children receive adequate care from a GOC qualified professional, their eyes are still developing.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

There needs to be specification on how the existing legislation is to be enforced, it currently is not. Suppliers can ship spectacles and contact lenses (without prescriptions) to the UK from elsewhere without customs stopping this, despite it not being allowed under existing legislation. Large companies within the UK are not held to GOC standards, the GOC currently appears to be biased and not serving to protect the public's best interests.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patient's best interests is prioritised over large company's profits.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Modern tools can aid in taking measurements in dispensing, but they should never be solely relied on. Traditional measurements give more reliable and often more accurate results, and it is important for individuals dispensing to understand how to take all required measurements for complicated prescriptions and the purpose of taking these measurements. Similar to how optometrists should never solely rely on analytics produced by diagnostic tools (ie OCT scans), these tools should only exist to compliment a traditional, thorough, eye health assessment.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Remote care is essential for some individuals, but not equivalent to the eye care received in practice.

Unfortunately even in practice the increased reliance on automated machines means some practitioners are skipping over more reliable, accurate methods of assessing eye health and less accurate measurements for spectacle dispensing.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Technology can be hugely beneficial to practicing optometry and for dispensing, great to use in addition to traditional methods. However, automated equipment cannot replace current methods entirely. They are complimentary techniques, not interchangeable.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

It needs to be clarified that autorefractors cannot be the sole information used to produce a prescription, that fundus photography alone is not sufficient as an eye health examination, that digital measurements for lens centration must be confirmed by a dispenser with traditional methods (ie city rule, head calliper, etc).

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Stronger wording in the Opticians Act that specifically addresses modern advances, see the response above to question 48.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

The legislation does not serve to protect the public if it is not enforced. It needs to be specified how the current legislation will be enforced (ie UK customs refusing imports of spectacles and contact lenses without enclosed valid prescriptions).

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

UK customs refusing imports of spectacles and contact lenses without enclosed valid prescriptions. The GOC monitoring how many GOC qualified members are in optical practices.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Our regulatory body need to be unbiased. Larger companies with higher profits are influencing the GOC to make exceptions to the standards all qualified dispensing opticians and optometrists had to put in years of study and training to prove competent of. This questionnaire highlights this, many of my responses today are explaining the core competencies the GOC required me to learn when undergoing my pre-registration year. The GOC could remove all legislation surrounding eye care and supply of optical devices, but this would not be in the public's best interest. The GOC's purpose is to protect the public and at the moment it seems GOC registrants are having to plea for the GOC to do so.

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Current legislation needs to be enforced, GOC policies need to be developed to find ways to effectively enforce current legislation.

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Sight tests

Contact lenses

Giving unsolicited advice to patients

The patient will not know which member of staff does what. Information that may be important that has been relayed to one individual might not get to the optometrist who will ultimately be responsible in fitness to practice cases

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Full sight test except auto refracor and taking fundus photos

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

History and symptoms.

Retail staff giving unsolicited advice to patients without consulting optometrist

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

The GOC is easily bribed by greedy unscrupulous directors. Cheap wages. High volume output. Money in the back pocket. Tick box campaigns.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Need to evaluate refraction alongside history and symptoms and eye health. This cannot be performed separately.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Refraction and eye health cannot be separated. Px follow up and imparting Patient with accurate advice and follow up will not be achieved when the sight test is split. The patient is at risk.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Splitting the sight test and relying on another's accuracy and responsibility that if the patient were to come to harm would ultimately fall on the optometrists shoulders. Litigation/ accuracy/ responsibility/ lazy eyes/ what is normal for patient. Refraction is not a stand alone procedure. Also cover test/ motility/ pupils. Where does this end. This is the GOC trying to devalue the importance of a full sight test as it is being pressurised by large multiples. Profits before patients.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As the present sight test exists . Patients have all their eye health and checks catered for and it is a patient centred experience. Let's keep it that way. The GOC has been influenced and bribed too much by greedy directors who have no respect for anything except monetary gain and devaluing the profession.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

I'm a locum. I cannot divulge that information. But I know a dispensing optician would be unable to do this and I would probably have to retest patients in order to give a full accurate diagnosis.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

The [redacted] and most optometrists are not happy with the GOC. Patients will suffer and standards will fall. If the [redacted] and the GOC continues with these ridiculous proposals there is no future in optometry. Is this what we pay our fees for. Patient sight loss will increase. It will not be a patient centred experience

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Patients guess their prescriptions. Never bother having a contact lens check.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patient health. No aftercare. .public using cheap non recommended brands. Arriving in practice with emergency corneal ulcers. Patients self diagnosing and self medicating in internet for contact lens problems. No respect for optometrists the more the industry has been deregulated

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Children and low vision patients. Public dont value your service and dont want to pay for your expertise. This culture has come from optical bodies that have not supported this profession.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It is not in these vulnerable patients best interests. Many of them are unable to speak for themselves and may accept substandard appliances. Also many people do not know how to interpret a spectacle prescription.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

They've already gone too far

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

It's already happened. You did nothing to stop it.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Patients do their own thing anyway

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients make it up anyway

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

A proper contact lens fit and prescription check.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Patients do their own thing. Price is the public's greatest issue. No one wants to pay for a service.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Many patients turning up with corneal ulcers. Many share lenses and have no idea of basic hygiene. Often they try to teach themselves how to insert and remove contact lenses. I've heard some horror stories like removing contacts with a cotton wool bud.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

As above. Patient thinks they know more about your job than you do.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As above.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Too late.

Where was the support from our optical bodies to have put a stop to this years ago

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The customer always blames the optometrist even if they have ordered something wrong. Sometimes the abuse patients give you is shocking. No respect. Service has been devalued. And looks like the GOC wishes to continue in this mode. Can you really say that this is beneficial for the profession.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

Everyone should have a sight test every 2 years . Prevention is better than cure. We dont think twice about seeing a dentist every 6 mths. Why skip on eyecare when it is our most precious sense

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Eye health. Sight loss that may have been preventable. Prescription will have probably changed. How many people come in for sight tests saying they have great eyesight and can only see the top letter on a chart

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Unnessary sight loss. Cheap online specs cannot bring back unchecked eye problems. The public expect modern medicine to fix the unfixable. Many turn up too late and expect miracles

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Under 16 are vulnerable groups that may have no voice and need spectacles to be checked and fitted by a professional. DO or OO.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Money. As always no value or respect for our profession

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No value on eyecare for vulnerable groups. No checking of appliance. Devalving profession.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

It's already gone too far. No respect for our profession

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It's already too late

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Oct scans are great. But remote care not so good. Many tests need to be done in person. Think how many of the public have been mistreated or had serious health issues like cancer overlooked while GPs were doing remote care during covid.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The optometrist has to see the entire picture by performing the whole sight test before concluding what advice/ referral/ monitoring. All the pieces of the jigsaw must fit to solve each patients concerns.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

As above. Professional standards. Litigation

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Could be a lot of misdiagnosis. Doctor google

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Patients have no knowledge of optics. Most dont know how to write a prescription online. But they feel like they are experts in your job. I wouldnt tell an electrician how to wire a plug

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

I am broadly in agreement with the objectives, with one exception. I think the wording of Objective 1 could be interpreted as somewhat complacent - that current patient and public safety is adequate and only needs to be maintained.

As an optometrist with nearly 40 years experience and as an expert witness in over 75 cases, I have seen many examples where patient and public safety has not been maintained. I think this review is an opportunity to ask how the GOC might improve its regulation to better protect patient and public safety.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

1. Contact lens substitution - supplying contact lenses of a different type to that in the specification provided by a registrant.

2. Supply spectacles or contact lenses without an optical prescription from a registrant. As an example, one case I remember vividly is a older man, a retired professional, who avoided eyecare and just bought ready-made reading glasses. Eventually, he saw me after many years without eyecare. He was blind in one eye and visually impaired in the other from advanced glaucoma. He thought that eyecare was unnecessary because otherwise, why would the law allow him to obtain reading glasses without a prescription.

When I first qualified, he would not have been able to obtain reading glasses without a prescription and the law would have led him to have eyecare and saved his sight. The relaxation of the law in the 1980s (I believe) to allow ready-readers without prescription has cost many people their sight.

If the GOC seek to keep the public safe, reverting the law so that eyecare is required for any spectacles to be provided would be an excellent outcome.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Sight testing, as defined by the law at present. This should only be allowed by optometrists.

Plano contact lenses carry significant risk and are widely provided without a prescription by non-eyecare professionals. The GOC is failing to maintain patient and public safety in this regard, and any change to legislation should be used to strengthen the GOC powers.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

The sale of ready-readers should only be possible to an optometric prescription.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

The current situation is unfair and it seems likely that businesses who are most in need of regulation avoid meeting the requirements for business registration so that can be essentially unregulated. I support the view that all UK businesses providing eye care services and/or supplying spectacles or contact lenses should have to be registered.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

There are many advantages, including ensuring public protection. Also, I have heard of many instances when employers, typically in non-registered businesses, place inappropriate pressure on registrants to prescribe and sell. The GOC Business Standards are good and should apply to all optical businesses.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

I am the governor of a school and I have seen the benefits in terms of compliance and standards of an organisation knowing that a body oversees them with powers of inspection.

I have heard of instances when supervisors are not present, or children by non-registrants without supervision. Also, of pressure to sell or prescribe, in appropriate signage/adverts, etc. Powers of inspection would help avoid/minimise these problems.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

A glance through Fitness to Practise cases reveals the need for higher standards, not a lowering. In my experience as an expert witness in over 75 cases, the GOC only sees the tip of the iceberg, with many cases the subject of civil litigation and typically settled out of court.

I have high regard for my dispensing colleagues, but from nearly 40 years experience I am sure there would be a detrimental impact to public health if the status quo was relaxed to allow dispensing opticians to refract for the purposes of a sight test.

As an example, one of the most moving cases of my career was a young teenager with headaches and a refractive error. It was only after ophthalmoscopy that I saw slightly suspicious optic disc cupping and declined the mother's request for glasses and instead referred. The referral led to the early detection of a brain tumour and the child's life was saved. If the child had been seen by a sight testing dispensing optician instead of an optometrist, the child would almost certainly be dead. How can the GOC, a body dedicated by statute to public benefit, consider such a step?

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Please see last answer for an example highlight that a disadvantage would be an adverse impact on public health including, in rare cases, unnecessary patient death.

The requirement that a sight test includes an eye health check by a professional optometrist who has had four years' training in pathology is an essential safety net for public health. The removal of this safety net, by allowing dispensing opticians to refract, would increase health inequality. This is because better education and higher income individuals are more likely to pay more for eyecare by an optometrist, with lower income more disadvantaged individuals seeking free sight tests, which no doubt the large chains would employ lower paid dispensing opticians to provide. As with other health inequalities, it would be the disadvantaged and ethnic minorities who would suffer.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

On any day in any town centre in the UK, any member of the public could I am sure find an optical practice offering sight tests, often free-of-charge. At present, this includes an essential health check. Relaxing the law to allow refraction by DOs would remove this health check for no benefit. There is no lack of availability of sight tests and there is no cost barrier. So, there is no reason to sacrifice public health.

The only advantage of relaxing the current standards would be to allow optical businesses to make greater profits.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The current system is not ideal, but does ensure broad unrestricted access to eyecare (for example, compare the availability of NHS sight tests, which are widely available, with NHS dentistry, which is scarce).

The only disadvantage of the current scheme is that employers sometimes place undue financial pressures on registrants and selling tactics on patients. If the GOC can increase its powers to regulate optical businesses and enforce its standards of practise, this would improve financial equality and inclusion because less resilient individuals would be better protected from "hard selling".

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Harvey, K., Edgar, D.F., Agarwal, R., Benwell, M.J., Evans, B.J.W. (in press) Referrals from community optometrists in England and their replies: a mixed methods study *Ophthal Physiol Opt.* 42(3), 454-470.

Shah, R., Edgar DF, Jessa Z, Yammouni R, Campbell P, Soteri K, Hobby, A., Khatoon, A., Beg, A., Harsum, S., Aggarwal, R., Evans BJW (2021) Referrals from community optometrists to the hospital eye services in Scotland and England. *Eye (Lond)* <https://doi.org/10.1038/s41433-021-01728-2>.

Evans BJW, Edgar DF, Jessa Z, Yammouni R, Campbell P, Soteri K, Hobby, A., Khatoon, A., Beg, A., Harsum, S., Aggarwal, R., Shah, R. (2021) Referrals from community optometrists to the hospital eye services in England. *Ophthal Physiol Opt.* 41(2):365-77.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

The publications cited in the last answer support the importance of refractions including an optometric sight test to detect pathology.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There are two disadvantages to status quo.

1. substitution: contact lens practitioners carefully fit lenses and satisfy themselves that the lens type and fit is safe before produce a written specification. It makes a mockery of the system for an online supplier to then substitute the prescribed lens type with a different one.

2. plano tinted contact lenses are very easy to obtain without a professional fitting.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

It is important that contact lenses should only be supplied to a prescription from an ECP and that the lenses are exactly as specified.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I think it would be a good idea to remove the requirement to verify. There should be an obligation on the supplier to check the prescription is supplied, under the supervision of a registrant. But as long as this happens, there should be no need to verify. For example, there is no need for a pharmacist to

verify a medical prescription.

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

The requirements need to be tightened, as already there is a public risk from people obtaining plano tinted lenses without a prescription or professional fitting.

If the law was relaxed further this would lead to greater risk and more sight loss.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The requirements need to be tightened, as already there is a public risk from people obtaining plano tinted lenses without a prescription or professional fitting.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

As explained in earlier answers, the public would be better protected if ready-made reading glasses were only available to a prescription from an optometrist.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Please see earlier examples - the requirement for a prescription within the last two years helps to encourage regular eyecare and thus protect the public. If this safety net was removed, it would lead to sight loss and represent a failure to maintain patient and public safety.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I think the current legislation is a good way of ensuring financial and equality, diversity and inclusion because optical prescription require for all, not just those who are most likely to realise the importance of healthcare.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Dispensing opticians play an important role and this is particularly important in two scenarios: children's eyecare (because if spectacles do not fit well, the child will not wear them) and sportswear/protective eyewear (because the frame, lens, and fit all need to be appropriate). When these scenarios come together, it is especially important that eyewear is provided by a registrant.

I think the question raises an important additional point. Registered medical practitioners have no training in spectacle lenses, lens materials, frames, or fitting. They should not be able to supervise the provision of any optical appliances.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The current legislation is a reasonable protection for the public.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

As noted above (with reasons), any powered spectacle lenses should only be supplied under the supervision of a registrant.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

see earlier comments.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

OCT and panoramic imaging modalities, and others, have great potential for improving eyecare and the accuracy of optometric referrals.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Please see earlier comments about ready readers and plano contact lenses.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Please see earlier comments about ready readers and plano contact lenses.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Some practitioners regularly breach GOC Standard 6.2, to make appropriate referrals. Research (21. Parkins, D.J., Benwell, M.J., Edgar, D.F., Evans, B.J.W. (2018) The relationship between unwarranted variation in optometric referrals and time since qualification. *Ophthal. Physiol. Opt.* 38(5), 550-561) reveals that some practitioners over-refer. Other research (see below) indicates that referrals are most appropriate when the HES replies to the referring optometrist, yet this is the exception rather than the norm. This is not an area where I can see a way for legislation, but if the GOC could encourage replies to optometric referrals this would be likely to enhance patient and public safety through improving referrals.

Evans BJW, Edgar DF, Jessa Z, Yammouni R, Campbell P, Soteri K, Hobby, A., Khatoon, A., Beg, A., Harsum, S., Aggarwal, R., Shah, R. (2021) Referrals from community optometrists to the hospital eye services in England. *Ophthal Physiol Opt.* 41(2):365-77.

Shah, R., Edgar DF, Jessa Z, Yammouni R, Campbell P, Soteri K, Hobby, A., Khatoon, A., Beg, A., Harsum, S., Aggarwal, R., Evans BJW (2021) Referrals from community optometrists to the hospital eye services in Scotland and England. *Eye (Lond)* <https://doi.org/10.1038/s41433-021-01728-2>.

Harvey, K., Edgar, D.F., Agarwal, R., Benwell, M.J., Evans, B.J.W. (2022) Referrals from community optometrists in England and their replies: a mixed methods study *Ophthal Physiol Opt.* 42(3), 454-470.

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

GOC Standard 8.2.6 is poorly worded and, if taken at face value, is breached by every optometrist every day. The subsequent clarification that was provided really only highlighted a flaw in the original advice. The problem is that optometrists carry out many tests in an eye examination, and no-one individually obtains consent for every test. Presumed consent is widely assumed for the typical tests that any reasonably competent patient would expect to be in an eye examination. At the next revision, I suggest this is reworded as "Consent for any examination or treatment that a patient may not expect or understand to be part of an eye examination".

GOC Standard 9.7 is also often breached when, for example, anyone working at that practice would be able to make a reasonable inference about supervision.

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

Regarding separating refraction from the rest of the eye test:

It seem to be a change to either placate DO's and CLO's or to make up for a shortfall in Optoms. The first reason is not a good reason, the second requires incentivising more people to train as optoms and creating more training places.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

The current ones that are already restricted

7 What activities do you think must be restricted to our registrants?

Please provide details.:

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Several reasons why not:

History and symptoms is a key part of an EE. Who would do this? If the DO/CLO then the optom doing an ocular health examination would be missing crucial information (e.g. spontaneous distortion of vision). If the optom then the DO/CLO may miss out on crucial pieces of information (e.g. one eye amblyopic, sudden onset diplopia, asthenopia when viewing a VDU).

Linked to the above, I had a patient in April 2022 who mentioned vague headaches. Then during refraction they again mentioned the headaches and pointed to their left temple. I stopped the refraction and discussed temporal arteritis symptoms and ended up referring to the GP who confirmed this was the cause and the patient rang me to tell me her markers were so high she was an imminent risk of sight loss etc. The patient had already had an appointment with the GP who had not picked on the symptoms. If the refraction and history and symptoms had been separate I would not have picked up on this subtle hint as to the cause of the headaches. By separating these two parts of the eye test it will be creating situations, such as this real life example, where preventable sight loss will occur that could have been avoided if the status quo for the eye test were kept.

Who would do ocular muscle balance? The DO/CLO doing the refraction, as prism is part of the refraction? If so then who does motility and cover test etc...this is not part of the refraction but needs to be combined with the prism result to inform any referrals or not.

Following the above: What if an optom is given a refraction with prism for a child. Then they do motility on a child and find a muscle issue that needs referral. Does the prism need to be removed from the refraction? Should it stay? Who makes that decision? Similarly for an adult complaining of diplopia. What if a refraction from a DO/CLO shows prism but then a cortical cataract is found on ophthalmoscopy? Does the patient still need prism or is the cataract the cause? Who would determine that and how could they if they were only doing the refraction or ocular health issue? You could argue that the optom could do a recheck but we can be certain that a number of practices would not be allowing time for this in the diary system. Again this could lead to unnecessary harm to a patient...e.g. causing diplopia from unrequired prism, weakening of ocular muscles/ asthenopia etc.

Other crucial information can be gained in a refraction that informs other tests that may be required in an eye test. For example I had a patient who could see down to the 6/7.5 line on snellen...but only the right hand side of the chart. If the refracting DO/CLO only gave a 6/7.5- reading to the optom without any extra information, then other important tests such as amsler and fields may not be done. Clues during the refraction such as a patient moving their eyes/head to eccentric fixate plus a drop in VA would inform whether a test such as amsler is necessary. If only given a prescription and VA would the optom know to check this?

Talking of amsler...this requires a specific add for the working distance in a single vision lens...such as a trial frame. Would the optom have access a full set of refracting lenses in their room to be able to do this?

I feel patients with additional needs will also be adversely affected by this change. Those with limited mobility, social anxiety, fear of medical settings, dementia etc will find it much harder when having to see two people rather than just one. Rather than one person being able to build a rapport with them, so that they settle during the full eye exam, and the best result achieved, information may be lost. For example, often extra information that did not come out in the original history and symptoms is forthcoming when a patient has settled. Some, such as those with social anxiety, may even not come for an eye examination because the thought of seeing two strangers is too much for them.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

See above answers to Q15.

The only advantage I can see is that more optom time is freed up so more sight tests can be done over the course of a month/year.

Another negative is that if a patient comes back complaining of a problem with spectacles, and a DO/CLO does prescriptions, then they will be likely looking at it from a purely prescription/dispensing point of view. Sometimes however it can be sudden onset of an ocular health issue, such as wet macular degeneration.

By the time one or two recheck refractions are done and the patient is passed on to an optom for persistent poor VAs, several weeks and the crucial window of opportunity for best outcome/prognosis may have passed. Or worse still, the patient is just given a refund and no ocular health assessment is done during a recheck with a surprising drop in VA and no referral is done causing permanent, preventable sight loss.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Positives:

Patients understand the current system.

Less risk of preventable sight loss/ health damage to a patient.

Less barriers for patient to attend an eye exam, especially those with greater needs (e.g. autism)

Negatives:

The sight test fee might be lower with a DO/CLO doing the refraction....but as the EE is already underfunded that is unlikely to have a large impact on matters.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

Apart from anecdotal evidence such provided above.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Contact lenses have inherent risks with use. Without proper instruction and supervision there could be permanent loss of vision.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

A disadvantage is that someone can be buying CLs online without a prescription and risk losing sight or other issue. I had someone a few weeks ago that had not had an EE or CL aftercare for 5 yrs! His eyes were healthy but his prescription had changed so much he was no longer legal to drive but was still buying CLs to the wrong prescription and driving in them!

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

Is it not fair to restrict the supply of optical appliances without a good reason. Some may not make a good judgement, but someone perfectly healthy may also not make a good judgement call. That is just a human right.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Patients go for the easiest route, especially younger people with less life experience, leading to a lack of care or understanding of risks. It is well known that many do not read instructions/safety warnings, and the same will apply to the use of CLs. A greater risk to ocular health would be made by not regulating CL supply.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage:

Someone could order the wrong strength and cause headaches or have vision blurred enough to cause other risks. Most people do not understand a spectacle prescription, let alone how that may or may not translate into a CL prescription.

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

I have has patients come in after wearing zero powered lenses unable to remove them from their eyes from wearing them the day before. If someone was too embarrassed to come forward for several days...or it is the weekend and they wait until the Monday to seek help, then the risk of severe infection etc is there.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

No

Please give your reasons and provide any evidence to support these.:

While there are risks from the wrong PD, heights on varifocals etc, mostly they are low. Certain higher risk people, such as those with a decompensating phoria may have issues caused, but it would be difficult to regulate to protect these few.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

It is important to incentivise patients having regular eye exams to be able to pick up on ocular health issues at an earlier stage. Limiting the prescribing of spectacles to 2 yrs from the issue of a spectacle prescription helps with this. An optom would only go beyond the 2yrs if there was a clear benefit to the patient outweighing such a risk...but would have the full history to look at to make such a judgement.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

A clear risk is the above. Someone may not have an EE because they wanted to save money (those who buy from non-registrants tend to be the most price conscious) and have important issues missed such as hypertension, diabetes, glaucoma etc.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Only optometrists and dispensing opticians allowed to dispense and non registrants must be in the presence of a registered optician.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Contact lens supply.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Children, elderly and mentally/physically disabled.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not Answered

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Could be incorrect

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

Keep the profession running as it is- I would not want to as an optom be signing off on refractions and doing solely health checks

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refracting patients and performing health checks

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refracting and performing health checks

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

No

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

No

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Optometrists are thoroughly trained to refract and know the limits of how much to change or alter prescriptions

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Financial impacts would hit employed and locum optometrists badly as we trained hard to get to this level of income

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Optometrists are comfortable in refracting and the public have their trust in our refraction

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Optometrists have extensive knowledge on cls and cl related issues so that should be limited to them and CLO's

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It should be left as it is

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Pxs would be more likely to order online

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

They may have not had a sight test in many years and make glasses up and then not be able to see clearly through them

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

It should remain as it is as face to face checking and examining the eyes is a lot more accurate and we can be more empathetic towards the patients too

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Keep it all as it is

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Student optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

-dispensing
-Will be unsafe for them to do refraction,contact lens assessment,ocular health assessment .

7 What activities do you think must be restricted to our registrants?

Please provide details.:

-Doing refraction as a registered optometrist will have the desired training and experience.
-As a student optometrist we have to go through rigorous training for refraction,go through pre reg training after graduating and then become an optometrist so it won't be safe if dispensing optician or assistant does this and will lead to high number of complaints by patients.
-this is the same scenario if a nurse was to do a doctor's job.Without the years experience it would be unsafe for the public and will lead to unnecessary problems.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

These tasks should be restricted to optometrists:

- refraction
- oct scan interpretation
- contact lenses assessment
- ocular health assessment
- referrals
- Assessing eye misalignments

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

- orthoptic training for optometrists so that eye misalignments/ diplopia can be corrected without referring to orthoptics in hospital.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

- lack of training and experience of dispensing opticians doing refraction will lead to high complaints by patients and will be unsafe.
- there would be no division between optometrist and dispensing optician so students in future may not want to study optometry which is a harder course so there will be a lack of opticians in future.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not Answered

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not Answered

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not Answered

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not Answered

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

-all optometrists should be able to prescribe eye medication

-

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

Yes

Name of organisation:

[redacted]

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

Legislative changes should only be implemented if requested by the relevant professional bodies, with reasons as to why they are requested, otherwise there is a perception that big business is "calling the shots"

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Safety spec dispensing

Deregulated and/or remote eye testing

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Children and partially sighted dispenses

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

That is what we have professional bodies for.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Refraction on its own is not suitable for anyone other than big business who are only interested in selling spectacles. Health of the Px HAS to be at the centre of everything we and you do, and this is patently not going to improve Px health options.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Advantage - Big business can make more money.

Disadvantage - small business would be forced out of business or forced to charge for a proper eye examination. Patients would lose the ability to have an important health check which, as I'm sure you are aware, can pick up many other health issues.

People would assume a refraction is an eye examination and the risk is that people could go blind. What is the benefit that outweighs that????

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage - bureaucracy stays as now

Advantage - Patients have access to high quality eyecare every time they have their refraction checked.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

common sense dictates that any screening is going to save some sight

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Legislation needs to change to stop substitution being legal unless specified on the Rx copy.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes - please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

As now but add on Safety specs and complex Rx

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

better safety spec safety

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Even more substitution and wrong Rx wearing would occur

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Checking fit vision and care regime, as well as advice on future lens possibilities

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

No increased risk as they are sold nowadays and nothing is done about it. Doesn't mean its a good thing though

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Lack of full eye exam could mean problems not spotted during regular exams

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The fact that there is no evidence that it could cause harm is not a good reason to allow it to happen.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Student optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

I think there should be questions on whether some provisions in the 1989 Act is too business like and not fit for the modern direction of a more healthcare based setting in which optometry is following now.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Certain children dispensing, certain vulnerable groups of people who have low vision or complex vision patients eg, nystagmus, strabismus, albinism.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Certain children dispensing, certain vulnerable groups of people who have low vision or complex vision patients eg, nystagmus, strabismus, albinism.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should not be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

To try to advertise products/coatings/multifocal/progressives instead it should be the optometrist doing this thus following an approach to patients need.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

I think that regulation of businesses should be more in line with the 1959 Act not the 1989 Act as I have heard quite a few times customers come up to me saying that they are not happy with optical practices as they always focus on business side of things not the healthcare side of things and that they are pushed into buying the wrong frames and lens choices. I think that optometrists should be focused more on healthcare rather than business and this will help break the stigma link between patients and optometrists.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, another model (please specify)

Please give your reasons and provide any evidence to support these.:

The one in 1959 Act as I have seen many patients talk about the good days of when the NHS funded lenses and when optometric practices focused on patients' need rather than the untrue stigma that it does not.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Ocular albinism as they require a special level of tint as cited by research papers.

Strabismus as they require special dispensing of prism when necessary.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

No

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

As zero powered lenses can cause major impact on the corneal infections and that RGP's should be recommended first as they have the lowest amount of risk.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Yes as they often are prescribed things that are sale based and not of great benefit for patients. Secondly px are restricted to certain frames as certain measurements are needed to fit the patient but this could be mitigated if they forced all frames to be custom made. I have seen many marks on px and also I have seen many patients like a certain frame but that it does not fit them and then they leave frustrated.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

I think that lenses should be funded entirely by the NHS as it is punishing that people who require thinning (due to anisometropia and aberrations) as they have a relatively high prescription have to fork out at least £105, also when they require multifocal/bifocals/progressives they have to fork out sometimes at least £300 for a pair of glasses (just due to age and conditions when other's do not need to as this is fundamental for even the basic tasks) when they should not need to as this puts them at a disadvantage to the public through no fault of their own. Lastly, I think that lenses should be manufactured and customized entirely of the patient's need as that should prevent them looking in the wrong portion of lens and prismatic effect. This is not followed by all stores unless if they have a spherical equivalent of 3D.

Lastly, many patients talk about the "good old times", notably before the 1989 Act when it comes to glasses and are not looking forward to the future of optics as they feel it is very business like despite the focus on healthcare by many OPTOMs around the country

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Reasons specified in question 43.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I have seen [redacted] cause problems with dispensing as I have seen someone use them then it caused all the PD's to be wrong and all of the heights to be wrong and this went undetected until they collected it and this caused great discomfort but it was resolved quickly and we had to issue new pair of glasses free of charge. Now we have to use rulers which I think is a step forward in the right direction.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Detailed in question 46.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Enforce rulers instead of [redacted] dispensing as this would be a tried and tested method with no fault.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I specified my reasons earlier but I think everything in the 1989 Act should be repealed and the 1959 Act should be enforced while keeping the independent prescribers and except the professional definitions of Optometrists/DO,s/others and the CPD Areas which are improving patient care.

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Yes as specified above. Also, will help to remove stigma in Optometric practices.

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

Not sure what your trying to achieve here.

I can't see any advantages to the profession.

Your proposed changes to effectively a 2 tier eye exam and deregulation of supply optical appliances sounds like it is being commercially driven rather than enhancing eye care and protection of sight.

You should be promoting the profession to a higher level, as in dentistry.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Supplying and fitting of any type of contact lens including plano cosmetic. Why this was ever decided that that this was lawful is beyond me.

Refraction.

Ophthalmoscopy

Child dispensing

Complex Rx dispensing

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction.

Ophthalmoscopy

Contact lens fitting and supply, including plano cosmetic

Child dispensing

Complex Rx dispensing

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Discussion of Px's eye conditions (if any)

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

I cannot find your 2013 review of business regulation

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

as above

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

For instance the (still) unregulated supply of on line contact lenses.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

No.

This would over complicate the eye exam. Would the DO understand and be able to adjust any BV abnormality for instance. Would the DO be able to ensure that any incomitancy is 'normal' and not disease bases?

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

This would over complicate the eye exam and make the Px journey more complex.

This is really a backward step, making the UK more like France for instance.

This also sounds like a [redacted] driven idea to get more Px's through the 'till'.

It would become a 2 tier eye exam with most Px's electing to have a refraction only as "there is nothing wrong with my eyes".

You see this happening in practice already when most will elect not to pay for an OCT exam as "their eyes are ok".

This is such a backward step and another way to devalue our profession.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There are no disadvantages of the current sight testing regulation staying as it is unless you are using this to get more Px's through the practice for a 'quick' refraction and selling of specs.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

Logically the number of Px's with sight loss that could have been prevented if they had had a full eye exam rather than a "quick refraction" will increase.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The regulations regarding supply of cosmetic plano lenses and on line lenses needs strengthening. At the moment anyone can get any lens.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Px will just buy what they like 'on-line' which will not fit correctly

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The disadvantage would be the obvious that is incorrect lenses supplied leading to increased problems, increased disease, increased loss of sight.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

To be undertaken by a qualified optometrist or CLO.

Assessment of vision

Assessment of fit

Assessment of corneal health

Assessment of tear quality

Assessment of adnexa

Advice on lens wear and care

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

There is no difference to the danger or sight loss caused by plano lenses or prescription lenses. They both endanger sight if not fitted correctly and aftercares not followed.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

No

Please give your reasons and provide any evidence to support these.:

There would be far less harm to Px's if plano lenses were regulated. Of course it would. Who ever decided that it was safe for an unqualified person to supply and fit plano cosmetic lenses really was an idiot.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It would not impact a practice financially as these wearers do not attend.
It will continue to impact A&E as these Px's present with problems.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

This further act to decrease the professions brand.
The profession would look even more like car sales.
Increased Px dissatisfaction because ill fitting appliances.

You really need to think like the dentists. Increased regulation, increased professionalism.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

The 2 year restriction is to try to ensure that the Px returns for regular eye exams to prevent loss of sight.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The 2 year restriction is to try to ensure that the Px returns for regular eye exams to prevent loss of sight.
The outcome of your proposal would lead to more loss of sight as Px;'s would say "theres nothing wrong with my sight, I just need new specs"
This happens in China, they don't attend diabetic screening until the diabetic eye disease impacts their field of vision.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No disadvantages

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

incorrect fitting leading to increased eye trauma

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

no disadvantage

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

It depend on what you mean.

Remote disease detection would be an advantage, especially in remote areas but as most GP's would say that on line/phone consultations are very difficult (during covid) as you can't see the 'whole' Px

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

apart from cosmetic plano contact lens supply

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

Dispensing Optician and Student Optometrist

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

They should not be able to dispense under 16's or patients registered sight impaired or severely sight impaired, or safety spectacles without direct supervision.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Testing of sight. Fitting of CLs.

Dispensing of spectacles to under 16's/SSI/SI should be under direct supervision of OO/DOs.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Dispensing of safety spectacles as this is a medical device it should at least be directly supervised to ensure the correct frame and lens is being dispensed.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

I can provide a perspective about this from a dispensing opticians point of view and from a pre registration optometrist!

As a qualified dispensing optician I do not believe DOs have necessary training/knowledge to refract safely because of the lack of understanding of binocular vision and how pathology can affect refraction. It is in the patients best interests that the refraction and health checks are done by the same practitioner. Just like it is recommended that the sight test and dispense are performed in the same practice.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

This would positively impact DOs because they would have a more varied role within practice. However I am unsure if DOs ultimately WANT to be refractionists. If they did why have they not gone to university to study optometry like I did. A disadvantage is that a patient is having to explain things about themselves to more than one practitioner, first the refraction and then the health check. I think this will reduce the respect of both DOs and OOs and make people not think about the importance of health checks for their eyes because testing of sight and eye health checks will be separated they can just see a refractionist and get new spectacles and negate the fact of a health check.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I do not think there are any disadvantages of things continuing the way they are. I do believe that contact lens opticians should be able to undertake additional training to manage anterior minor eye conditions however I think this should be the limit. I think that dispensing opticians should have more capabilities of dispensing low vision aids they should get more practical training on this and Measuring visual acuity and teaching patients steady eye strategies and eccentric viewing etc.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

I know myself within the last 2 months I have referred 9% of my patients for secondary care.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

I am not aware of any studies in this field. I can only offer my opinions. Respect of optometrists is already low do not lower it more than it is now by separating refraction and health checks.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There are no disadvantages I think dispensing opticians should have additional training ie CLOs in order to fit CLs.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes - please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Safety spectacles - frame and lens options can only be adequately discussed by a professional to ensure the correct product is dispensed and the correct advice is given this could mean the difference between a patient losing their sight or not.

Patients with special needs also and those with prescriptions +/-10.00 or more (complex) as dispensing opticians are specifically trained to help choose frames/discuss lens options and are experienced enough to know the implications and how the finished spectacles might look.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Financially this would be beneficial to practices because there is less chance of remaking spectacles due to poor product quality or lack of information given to patients managing their expectations. Financially also beneficial to patients because they receive correct advice and more likely to be happy with finished spectacles as sometimes they may not wear specs they are unhappy with.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

They should be verified and a log should be kept. A copy of rx or CI specification should be signed by OO/CLO

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients could end up with incorrect CI which are still a medical device. Shall we send a patient away with lenses they have a car accident and it's our fault. Or the blame the prescriber thinking it's their fault when in reality they bought CLs from another seller who did not adequately verify their specification and have provided incorrect lenses. Shall we send an amputee patient away with a leg that doesn't fit their leg properly?

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Yes it should define what is done in an aftercare because there is so much variety between practitioners so patients don't have any consistency

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Still a medical device. Still provides all the same risks to eye health that lenses with power do so why should it have different laws

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Risks are still the same therefore care should still be the same.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There are no disadvantages. There are advantages that patients will be properly cared for in optical practices. The correct advice will be give. This means they are less likely to have an eye infection and end up in hospital costing the NHS money.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

No

Please give your reasons and provide any evidence to support these.:

Illegal sellers are not adequately identified nor punished. Why does it take other practitioners to report offenders. They should be actively sought by the GOC and prosecuted irrespective of anything else.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

This is necessary. Patients should not go longer than 2 years between sight tests unless is special circumstances deemed acceptable by a GOC registered practitioner.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients may not realise they are using an out of date rx nor the importance of a new sight test this could cost the patient extra money putting things right. Could cost the business money putting things right. This could cost the nhs money treating patients with things that could've been prevented or treated earlier.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There are no disadvantages to it remaining. The advantage is that patients realise the importance of regular eye health checks.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This could mean that patients end up with eyewear that does not fit correctly nor the satisfy the prescription like the prescribed intended because it has not been checked by goc registered professionals.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There are no negatives. Patients will end up with the best quality care.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

It should be a practitioner decision as to whether online or in person consulting should happen.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

The act should dictate who's responsibility it is to find unregistered sellers and what punishment they should receive and what punishment they should receive for repeat offending.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

GOC should be responsible for finding and prosecuting unregulated sellers in order to protect the general public

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Any sale or supply of optical devices

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Any sale or supply of optical devices

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – with no restrictions

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Amendments would be required in the curriculum and teaching of Dispensing Opticians. The inclusion of this responsibility would require extra training/CPD for existing Dispensing Opticians to acquire the required skills/ability.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

All vulnerable adults

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Ensures all vulnerable groups are cared for by a registrant.
More care would be required to identify patients that sit within the aforementioned vulnerable category.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Likely negative impact, more opportunity for errors if not being verified by a registrant.

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This would put the public at greater risk.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Remaining as is mitigates the risk and ensures the public are being protected

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This would put the patients at greater risk

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This helps to protect the public

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

The sale and supply of all optical appliances should always be conducted under direct supervision

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Online sale of optical devices should be abolished

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Any of the constituents which currently make up a sight test or eye examination, including but not limited to;

- History and symptoms
- Refraction and visual performance tests
- Ocular examination and interpretation of any additional relevant tests.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

All of the above

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Not sure / no opinion

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Delegation of such responsibilities to a suitably accredited dispensing optician would potentially increase capacity of optometrists but an oversight is necessary. Visual problems rarely relate solely to refraction, and any change to regulations would need to ensure the role of the optometrist is protected to continue providing suitable analysis and any additional checks as necessary to ensure public safety.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The clinical components of sight testing and eye examination aside from refraction, are already under valued and underfunded. In high street practice, it is well known that provision of services alone is a loss leader and that these services can only be funded by the additional revenue which spectacle sales provide. The separation of refraction from "ocular examination" would lead to a system where the focus of practice owners would be on providing refraction and the supply of spectacles as cheaply as possible. The cost of providing any additional health related services would therefore no longer be cross subsidised either resulting in reduced provision or substantially increased fees which I suspect the DHSC would be unwilling to meet. Public eye health would undoubtedly suffer as a result.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I cannot envisage a scenario where either increased or decreased legislation would be beneficial

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes - please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Adult patients who, through learning difficulties or disabilities, present similar demands for expertise as those required for under 16s.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Circumvention of rules related to sale and supply of contact lenses by online companies has been widely documented. Contact lenses are readily available without any written specification and these loop holes need addressing.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

Yes

[redacted]

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

The objectives proposed will provide more confusion for the public as to who is examining them and for what purpose. Splitting services over several practitioners will weaken the patient/practitioner relationship and result in poorer eyecare for patients.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction

Interpreting results of fundus imaging.

Dispensing of under 16's and visually impaired

Contact lens sale and supply

Selling of zero powered contact lenses

All of the above should be done under direct supervision. i.e. on premises and in a position to intervene.

The current GOC rules on the sale and supply of contact lenses are frequently ignored. The GOC's enforcement of these rules is virtually non-existent. This results in a free for all and a race to the bottom!

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Eye examinations including refraction

Interpreting results of fundus imaging.

Dispensing of under 16's and visually impaired

Contact lens sale and supply

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

All businesses supplying spectacles are providing medical devices. They should and must be registered and regulated.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

Registering and regulating all businesses providing eyecare and spectacles would ensure a level playing field for all. Patients can then purchase optical care and products from all providers knowing that there is recourse to the UK optical bodies.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

VA, refraction and ocular health are all linked.

For some people 6/9 VA is perfectly normal, for others it's a sign of imminent pathology and vision loss. Splitting parts of the eye examination out does

not provide holistic care for patients.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

VA, refraction and ocular health are all linked.

For some people 6/9 VA is perfectly normal, for others it's a sign of imminent pathology and vision loss. Splitting parts of the eye examination out does not provide holistic care for patients.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

9% Available from our PMS system

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

There won't be any evidence as it has never been done!

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The current rules on contact lens fitting are largely ignored.

The GOC is toothless in this area and rarely takes action against breaches.

Rules need to be tighter and enforced. It is a weekly event where I come across patients being supplied without contact lenses aftercare and even self prescribing.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The current system is providing a competitive advantage to those merely selling lenses and not providing care to patients.

This is leaving the public at risk

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

The current restrictions are adequate

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

The current rules on verification are ignored. Despite it being a daily occurrence where I come across people buying lenses online, I cannot remember the last time I was asked to verify a prescription.

The current system is not fit for purpose and is being ignored.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Patients are at risk.

Currently if a patient buys online, they should access their care from whoever supplied them lenses. The majority of these suppliers don't take on this responsibility, so patients turn up at minor injuries units and A&E with contact lens problems.

This is a waste of NHS resources and is a direct result of ineffective rules putting patients at risk.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

No-one does it, it's been years since I last had a request!

Patients can go on a website and order whatever they want without checks!!!

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Nothing would change, no-one does it anyway leaving the public at risk.

The GOC is failing in its responsibilities with regards to regulating contact lens supply.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Examination of the lens in situ.

Examination of the anterior eye.

Verification of lens fit.

VA assessment and over-refraction.

Solution review (if required)

Discussion around wearing times

Discussion on hygiene

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Optometrists are correctly bound by GOC rules on supply.

Fancy dress shops ignore this and sell them over the counter without checks.

Suppliers of these products need to be held accountable for who sells and supplies them, fancy dress suppliers are frequently ignorant of the law, the suppliers are fully aware of the law and are ignoring it (or using loopholes).

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

All contact lenses pose a risk if not used and fitted correctly, zero powered lenses are no different

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

The law needs to be tightened to ensure that zero powered lenses are treated the same as all other contact lenses. The risks are the same, if not greater.

Suppliers need holding to account when they sell to non-registered optical businesses

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There current law is not working.

It's being ignored, giving a clear risk to patients.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

All businesses supplying optical appliances (a medical device) should be registered with the GOC

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

With approximately 25% of the patients we refer being asymptomatic, this would undoubtedly result in pathology being missed and sight being lost unnecessarily.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

With approximately 25% of the patients we refer being asymptomatic, this would undoubtedly result in pathology being missed and sight being lost unnecessarily.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No disadvantages in remaining

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Sales of optical appliances to under 16's must continue to be done by registered persons.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

The practice of companies registering websites outside of the UK and sending products in from abroad bypassing UK legislation needs looking at.

Many of these websites have .co.uk domain names giving patients the impression they are buying under UK rules when they are not.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Ensure all websites with a .co.uk domain are registered with the GOC and following UK rules.

Making sure spectacles and contact lenses are treated as medical devices and ensure that personal importation of them follows the same rules as other medical devices.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction (testing of sight)

Contact lens fitting

Selling spectacles to under 16s

Selling spectacles to visually impaired

Selling zero power contact lenses

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction (testing of sight)

Contact lens fitting

Selling spectacles to under 16s

Selling spectacles to visually impaired

Selling zero power contact lenses

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Completion of occupational forms for VA and ocular details

DVLA VA / visual field tests

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Refraction and assessment of VA is an integral part of the sight test.

I can think of two recent examples in 2022 where patients presented for 1) a contact lens follow-up reporting that her new multifocal contact lenses were not giving good VA and 2) a patient returning for recheck early as thought her glasses were incorrect. Because of the suspicious and specific nature of the patients symptoms and the demonstrable drop in VA, I decided to perform OCT and discovered both patients had Wet AMD.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Positive - Optometrist would be able to concentrate more on clinical care, but this isn't currently funded to a workable degree by the NHS

Negative - Optometrists would need to train to a higher degree to perform extended clinical services but funding for this is not great
Also see above, potential for sight threatening pathology to be missed

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

NHS eye test is under funded and financially non-viable

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Positive - The current system of supply of services by highly trained professionals works well but it is under funded.

Negative - It is possible that the current system is holding Optometrists back from progression to a more clinical-based system, but at present the funding for this is lacking.

I have personally had to pay twice now for IP theory courses as I wasn't able to get a hospital placement for my HES training within the two years of completing the first theory course - I was let down by two different hospitals. In the end I have had to become a part-time HES Optometrist just to secure a hospital placement. My employer or local NHS provider wouldn't pay for the training courses so I have had to pay these myself.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

I personally refer about 1 patient a day from my clinic of 12 patients a day

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

My own experience from the two patients above and many others including an undiagnosed brain tumour (Normal VA but typical field defects), a child with retinoblastoma (normal VA but white reflex with retinoscopy), carotid artery partial occlusion normal VA but symptoms triggered an immediate referral to eye casualty - consulting medic said my actions had saved the patient's life, A young lady with normal VA but whooshing sound in ears and headaches turned out to be idiopathic intracranial hypertension, lady with sudden onset thunderclap headache but normal VA. immediate eye casualty referral revealed burst brain aneurysm - attending medic said my actions had saved the patients life.

There is always the risk that if a patient sees two practitioners, one for refraction and one for clinical assessment, or if the refraction is completed autonomously by a DO without an Optom present, that vital piece of information needed to reach a diagnostic conclusion may be missed. This can have dire consequences for the patient, practitioner and the profession as a whole.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

We hear cases where patients have been prescribed one lens and supplied another by unregistered online suppliers. often as they are cheaper for the patient. The GOC should be able to track down and deal with this problem

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I am not certain that a contact DO would have picked up the Wet AMD case reported before, unless they had experience in medical retina and were trained to use and interpret OCT.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Under 16s

People with visual disability

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

These groups can be more challenging to examine and require additional skill to obtain a correct result.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

Yes, online suppliers have been known to supply lenses without a prescription and change the lens type without supervision or change of perception from the Optom / CLO

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

If the supervision requirements were relaxed suppliers would be free to supply lenses to patients who may need an eye exam or contact lens check, they could supply additional lenses to patients that have been told not to wear lenses by the practitioner for health reasons, change lens type, prescription etc

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients may end up with lenses that are not suitable for them

They may order lenses when they have been told they shouldn't wear them for health reasons - acanthamoeba / corneal ulcers may increase especially if the patients have not benefitted from advice about how to avoid these issues.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Yes there should be a minimum number of clinical assessments to assess the patients VA and eye health performed by a practitioner trained to see contact lens patients and with up to date contact lens CPD

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

People want these lenses for parties usually, often non contact lens wearers without training in insertion, removal and infection prevention. These people will often buy these lenses online without any pre assessment or training, then we as the eye professionals have to pick up the pieces when things go wrong, eye infections, corneal trauma from bad insertion/removal techniques etc. GOC should have the power to prevent zero power lenses being sold without prescription

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Yes more infections and corneal/conjunctival trauma, more emergency appointments for practitioners to remove lenses that people can't themselves as never been trained and more cost to the patient or NHS whoever is paying for these extra services

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Legislation will help to reduce the above issues
GOC needs more power to chase non-compliant online suppliers though

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

For the patients that use these lenses, education is needed so that they see a practitioner first before having the lenses. Problem is these lenses are often bought on a whim or at the last minute and online purchase is so easy and natural for the younger generation. I have been told that these lenses may even be shared between friends without disinfection between!

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Optical appliances should be checked before supply. We had a patient supplied with online glasses after our refraction. Patient could see, online supplier didn't check the glasses just told the patient to come back to see us. Glasses were focimetered and found to have -3.00 cyls instead of -3.00 spheres. As a gesture of good will we changed the lenses for the patient but lost out in terms of lens cost and appointment time, for an NHS patient where the fee paid doesn't cover our costs this is not good from the business perspective.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

see below

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients may have pathology that is missed
VA may not be as good as it could be
VA may be below that legal for driving

With the current NHS fee as low as it is we need income from glasses sales to stay afloat.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Higher chance to detect asymptomatic conditions such as glaucoma
Higher chance of detecting patients not legal to drive due to cataract and referring on for cataract operations - better safety and quality of life.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Same reason as per non-sports wear optical appliances

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantages - Poorly fitting appliances may not protect the Childs eyes from impact. Prescription may not be checked so child may experience blurred vision, eye strain, headaches.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See above

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

There is a general rule that the supplier of the spectacles sorts out any issues if the patient has issues as they are the ones who get the money for the sale. With unregistered suppliers they usually send the patients back to the practitioner that performed the eye test, forcing them to spend time and money sorting out the issue. Legislation should reflect this such that any supplier registered or not would have a legal duty to sort out any issues. The reason unregistered suppliers are cheap is because they have no responsibility to the patient. They take the money and say not our problem if issues arise.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It is safer for there patient to keep things as they are.
unregistered suppliers are thriving on the good nature and duty of care of registered practitioners.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

GDPR makes it hard to discuss cases in forums with colleagues, it is necessary to get written consent before an image can be posted on a secure private forum or [redacted] group. This puts most practitioners off posting and in the long term is bad for practitioners education and therefore bad for patient care.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes

[redacted]

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Testing of sight

Fitting contact lenses

Completing a contact lens teach and signing off without this being checked by an OO or DO.

Selling zero power lenses

Dispensing to under 16s or those with a medical condition (eg dementia). An unqualified person advising someone who does not understand what is happening or cannot adjudge that this is the right corrective devise for them cannot provide a positive image for the profession and does not ensure that the patient is well advised.

Having a title that is close to dispensing optician as this causes confusion. I have spoken to many people who thing that a dispensing whatever or optical whatever must be a qualified person. This needs to be standardised.

You would not expect an auxiliary nurse to be called a nursing consultant/a nursing stylist etc. We need to fall into the same pattern of titles as the rest of medical health organisations. Optical Assistant might be more appropriate.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Contact lens teaches restricted to DO, OO or CLO

Fitting of lenses restricted to OO or CLO (with additional qualification)

Fitting of specs and advising on lenses for U16, those who mental health issues that affect decision making, such as a person with dementia; a person with severe restriction of movement such as neck immobility, should be restricted to DO.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Roles in practice such as safety officer, or overseeing that hazardous waste is allocated to correct boxes.
Chaperone duties for young person who asks for that facility.
Either of these should be covered in the teaching of legal regulations to registered DO and OO.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

It gives the GOC teeth!

At present you wait for someone to approach you about issues, not all issues are readily visible to all workers in a company.
Inspection would change the balance between companies and the legislative body.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

Not sure what the regulation of pharmacists is

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – with no restrictions

Please give your reasons and provide any evidence to support these.:

the DO should receive additional training and qualification for this function.

There has been discussion in the optical press about OOs being booked 'emergency appointments' when the patient has nothing wrong with them and just want a new prescription to buy online.

Separating the sight test from the eye examination would impact less on the time available for the OO to see emergency patients.

It also has the benefit of making the distinction between testing vision and the medical role of the OO clearer to the patient.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

I do not think this will impact on equality or diversity.

Financially the impact should be positive for practices as the (more expensive) OO may be better used for their main function, leaving the DO to complete the role related to the considered and qualified dispensing of specs in the interest of the patient.

It would need to be included in legislation that if the DO observes anything that needs to OOs attention the patient will be handed over.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Currently patients think the only person who can help them is the OO (usually referred to as the 'Optician'. A clearer progression of professionals within the practice may result in OOs not being encumbered by patients they did not need to see.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Current legislation is in the patients interest.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes - please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Dispensing Optician and OO or CLO

Some vulnerable patient cannot make a clear decision as to the benefit or otherwise of what could be a very expensive item.

For those with physical problems measuring a PD or centres of lenses may not be sufficient. If someone cannot raise their head or move their head from side to side the lenses must be selected carefully to be the correct design for that patient. This can include advising bifocals over PPLs etc,

For a profession that places a lot of store on its professional qualification system and where there is an increase in movement of tasks from hospitals to OOs in practice, it is not professional to have an unqualified assistant 'selling' spectacles to someone who should be supported to make a professionally advised decision to meet their needs.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I think that the standing of the profession would be enhanced by greater clarity between professionally qualified staff and those who do not have sufficient knowledge beyond the standard dispense.

It has been obvious for years that patients just think we re there to sell specs (Prof Darren Shickles work showed that clearly and was discussed on Eye TV some years ago. nothing has changed.

I also think that using a DO to dispense to those who are vulnerable, or those who due to disability cannot make an advised decision without clear advice would show that we are not there just to sell them glasses they cannot afford. It may make practices more inclusive and they could become a hub for optical advice. It would improve equality and diversity in patients. I have often been told that the Optician should be the first port of call for an eye condition and advice. Most will go to their GP or to the pharmacist. For the greater integration into the NHS we need more advertising of the Optical Practices role and for patients to recognise us as part of the Health Service. Now is a good time for this as practice staff have been wearing PPE and the advice to visit has been the same as for the NHS.

There may be some negative effect on practices as we transition to being a health care organisation but i do not think that tis is permanent. Sometimes, if you look after granny well, the rest of the family will follow.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

Depends on the change.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients may get the wrong lenses. I noticed that those patients who attended CL appointments with problems were buying online. Cost is seen as more important.

Again, I think that we need to boost our professional status.

When I go to the Dentist he checks glands around the neck, condition of tongue and throat does tells you he is doing it. I get a very professional explanation of what he is doing and why, while he works. We should be aiming for this standard. Supply should come with an explanation of what is being checked and why. Quite often lenses are checked and put on one side with the Px record cards. the Px rushes in and someone hands them their lenses. The PX has no idea that the lenses are checked. All they know is that they order them and they arrive. Why would they not go to an online seller?

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Contact lenses can cause corneal issues and physiological changes within the eye. these are relative to the power of the lens. It is in the patients best interest to have the suitability of the material and the fit of the lens checked before supply.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage to patient for health of eye.

Disadvantage to practice if legislation removed and CLs causes physical problems or infection. Bad news spreads more quickly than good.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

This protects the patient and ensures that they have an examination which may find factors that need treatment and could permanently affect their vision

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

In my experience the choice of some people not to go for an eye examination has nothing to do with cost. They just think nothing has changed so why bother.

If we explain to them that the examination can detect conditions early and may make treatment more effective.

Some patient who are on a limited budget may feel that they can self diagnose and just buy a stronger pair of specs or a cheap pair of ready readers at the detriment to their eye condition.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Those patient who do not realise the problems they can have with eye health will not be protected by an eye examination.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Protect children and ensures that they get the best advice. Myopia control is a major factor for young people and research is showing that benefits come from correct dispensing.

Ensures that sportswear is suitable for the patient and fits well.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If bought via optical practice will meet safety standard needed.

Cost may be an issue for parents and could affect inclusivity.

Cheap sportswear not meeting standard give a false sense of protection and may not protect child adequately.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Cost can be impact on inclusion.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Cost can impact on inclusivity

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

need to have standards for supply. I have seen some Rx dispensed to the nearest 0.50D.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

There should be no such thing as an unregistered supplier.

Even if these are not owned/worked in by someone qualified or formally registered, they should come under the remit of the GOC to ensure that the patient is protected.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Supply of contact lenses. Every practice should have a clear poster explaining the methods of supply and the process. I have had first year students who think you can just hand them out.

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Testing of sight forms a key part of the sight test with very real implications with regard to the health of the eyes. The 2 are not divisible and by allowing them to be separated we would reduce public confidence in the profession and undermine patient safety

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

By allowing a dispensing optician to refract you undermine the industry and the high standards we seek to maintain. It comes across as an attempt by major companies to reduce the costs of providing a sight test, and changes made to put profitability in front of patient safety should be rejected.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The only problem that I see with current legislation is that the NHS fee no longer represents fair value to the practice.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Given that these rules simply aren't enforced I shouldn't imagine the course any difficulties. It is a significant failing of the GOC

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not Answered

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

In so far as it also defines what constitutes a sight test

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not Answered

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not Answered

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

3 Which category best describes you?

Contact lens optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

Yes

[redacted]

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Dispensing under 16s. Supplying contact lenses (plano or rx) without a verified, in date sight test and CL prescription. Dispensing to blind/partially sighted patients. Sight testing. Refraction. Fitting and aftercare of contact lenses.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Dispensing under 16s. Supplying contact lenses (plano or rx) without a verified, in date sight test and CL prescription. Dispensing to blind/partially sighted patients. Fitting and aftercare of contact lenses.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

Delegation of refraction to Dispensing opticians - under supervision of an optometrist, would allow patients more flexibility in when and where they have their visual acuity and prescription assessed. This supervision could even take the form of remote supervision, with the Optometrist utilising the information from OCT, fundus photography, visual fields, tonometry and autorefractometry (already delegated tasks to trained staff in store), to have a full overview of the patient's ocular health. The final part of the routine could be performed via a remotely controllable digital slit lamp with Volk attachment, controlled by the optometrist, would complete the usual routine carried out in person in the test room.

With refraction being able to be carried out by Dispensing opticians, practices in remote areas could run a clinic, with the DO in store and the optometrist in another location, remotely supervising the overall examination and with the ability to intervene and recommend further tests or referral as necessary. More frequent refraction only appointments (perhaps yearly?) would give our profession more opportunities to intervene early, if a patient's visual acuity or prescription changed markedly. The change in visual acuity or prescription, may indicate a more serious underlying issue, which could then allow a swifter diagnosis of issue, that may not have been detected for 2 years or more, if the patient followed the usual routine appointment model. The usual 2 yearly examination, would involve both refraction and ocular health assessment, as it currently does, but this could still be delegated to DOs and optometrists, with the optometrists signing off the prescription and assessing the ocular health, either in person, or remotely, using the appropriate diagnostic equipment.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

By allowing dispensing opticians to carry out refraction, this would allow optometrists to dedicate more time to ocular health assessment and management, allowing more patients to be seen in practice, reducing the demand on Primary Eye care in eye hospitals. If refraction was delegated to Dispensing opticians, practices in remote areas could run a clinic, with the DO in store and the optometrist in another location, remotely supervising the overall examination and with the ability to intervene and recommend further tests or referral as necessary. This would give patients access to more locations to have their sight and/or ocular health assessed, especially in remote, or areas with limited healthcare resources currently. It would also allow optometrists to see patients in various locations, on the same day, by utilising the current equipment that can be operated by an appropriately trained technician and assess the results remotely. This would be further enhanced by the use of a remotely controllable slit lamp with volk attachment. More frequent refraction only appointments (perhaps yearly?) would give our profession more opportunities to intervene early, if a patient's visual acuity or prescription changed markedly. The change in visual acuity or prescription, may indicate a more serious underlying issue, which could then ensure the patient was referred to an optometrist, allowing swifter diagnosis of issue, that may not have been detected for 2 years or more, if the patient followed the usual routine appointment model. The usual 2 yearly examination, would involve both refraction and ocular health assessment, as it currently does, but this could still be delegated to DOs and optometrists, with the optometrists signing off the prescription and assessing the ocular health, either in person, or remotely, using the appropriate diagnostic equipment.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The time taken and the distance needed to travel to an appointment, deters a lot of patients from attending regular sight or ocular health checks. By allowing delegation of the refractive element to Dispensing opticians, under remote or instore supervision of an optometrist, would mean more appointments would be available, in more locations for patients to access. The remote examination of the patient's ocular health, could either be performed on the same day, or at another time, either in person, or utilising remote care with results from such equipment as OCT, fundus photography, visual fields and even the use of a remotely controllable slit lamp with volk attachment, would increase the 'reach' of one optometrist to more than one practice in one day. This would increase patient attendance and could reduce demand on primary care.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Contact lenses should still only be fitted and checked by a registered CLO or optometrist, either in person, remotely, or via an Ophthalmic technician under the remote supervision of a CLO or Optometrist, ensuring patient care is kept at the forefront at all times. The way in which this care is delivered should be allowed to reflect the modern practices that began during the Covid-19 Pandemic. The use of telephone or video triaging of patients should be allowed to continue. The option then, to attend for a health check and cl in situ check could then be carried out on a different time, perhaps even remotely, if a digital remote controlled slit lamp was available, where the ECP could be in one location and the patient in an alternative location. Increasing the availability of appointments to patients and improving patient compliance, as more locations could be available to them to attend. The issuing of alternative contact lenses which would allow a successful CL wearer to continue with wear, if their current lenses were not available, should be left to the professional judgement of the eyecare professional. Providing the current prescription had not expired.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients may self prescribe, or order incorrect the rx. I have personally seen evidence of patients with a toric rx ordering spherical lenses online as they did not understand their rx and the seller did verify the rx. Or order + instead of - powers. Also supplying plano cosmetic lenses with no advice on I&R, cleaning or general eyecare, results in patients risking their ocular health.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Assessment of the following:

The discussion and recording of px's health, medication, ocular history, family ocular history, occupation, hobbies, current wearing habits - hours/day, days/week.

The discussion and recording of any signs or symptoms

The fitting of any prescribed CLS.

The health of the ocular adnexa, including lids, lashes, cornea, palpebral and bulbar conjunctiva, sclera, anterior chamber, iris, anterior and posterior crystalline lens.

The visual acuity for distance and near tasks, and any over refraction required.

Advice on any ocular health issues and any OTC remedies

Referral to optometrist or HES if required

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Regulating the supply of zero powered contact lenses to only registered professionals protects patients from unnecessary risk to their ocular health

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

A remotely controllable slit lamp, currently in the final stages of FDA and CE marking acceptance, would allow an eye care professional to be able to see patients remotely and conduct a full anterior and posterior (with Volk attachment) assessment of the patient's ocular health and CL suitability/fitting. This would allow the same examinations to be performed remotely, as can be done in person. Such as visual fields, fundus photography, auto-refraction, OCT and tonometry. If this was combined with the ability of Dispensing Opticians to perform refraction, the ocular health assessment could be performed more efficiently than it is currently, utilising the skill sets of each registrant, to maximise patient care and efficiency.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The use of remote examination, or remote supervision, with tasks performed by ophthalmic technicians and signed off by a registrant would allow for greater flexibility for patients to be seen at a practice closer to them, reducing travel times and increasing appointment attendance. The delegation of refraction to an appropriately trained dispensing optician, would again allow the refraction to be completed before the optometrist assesses the patient's ocular health and signs off on the test. This would utilise time more effectively and allow patients to have more frequent refractions performed, with health checks performed more periodically, as usually determined by the optometrist

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refracting clients
Dispensing of children
Dispensing complex prescriptions
Providing contact lenses
Fitting contact lenses
Cosmetic contact lens supply

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction
Children's eye care
Children's dispensing
Complex dispensing
Contact lens prescribing
Cosmetic contact lens supply

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Unsure

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

All optical practices should be GOC registered to ensure best practice and adherence to highest professional stds

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Risk of further conveyor belt approach to patient care and creation of an even more disjointed patient experience

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Old fashioned description of purpose of eye test - needs modernising to reflect advances in the profession especially with regard to Pt Co-management in primary care

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The sight test is more than as described in the legislation now and this needs to be updated to reflect the purpose of the eye exam in the modern world and expectations thereof

Leaving as it is increase pressures in secondary care when optometrist have core skills which could be utilised more if the legislation was less prescriptive

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

No evidence but anecdotally a bad idea when peers asked

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage to protect the public

Disadvantage - easily flouted needs tightening

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

...

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

No

Please give your reasons and provide any evidence to support these.:

No - if tightened
Too loose at the moment
Easily flouted at potential risk to pts
Compliance poor

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Already flouted
Needs tightening
Pts don't undertake and often purchase lenses using their spec rx from online retailers who don't verify the rx leaving registrants to pick up the pieces
Novelty shops selling party-CLs don't even know there is a law relating to supply
Really needs stepping up for public safety

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Too vague
Not well publicised
Poor compliance

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Needs tightening up

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Better awareness / enforcement of a clearer more concise law relating to this product would increase public safety

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Some online retailers are providing inferior quality products which if for instance are for driving potentially present a threat

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantages to ensure pts attend for vision check at regular intervals

Disadvantage is this vision check only applies to appliance wearers abs should apply to all drivers too

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these.:

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these.:

Some Childress specs are being privies by online retailers - parents don't know or understand the legislation as it's not widely communicated

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Driving standards of vision and review

Prescribing of medications to support MECS and management of common ocular conditions - without IP qualification.

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Driving standards of vision and review

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

NHS sight test fee - practices charging less than the GOS fee should not be able to claim the full fee for NHS pts and their GOS remuneration should be capped at the value of their private eye test

Practices should be allowed to use the GOS fee as part-payment for eye examination rather than NHS / private split - this would help reduce the number of practices considering leaving the GOS

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

Are the GOC seriously considering this? How an earth is this benefitting patients and patient care?

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Ophthalmoscopy, binocular vision, refraction and triage relating to giving advice on patients signs and symptoms. I wouldn't accept a receptionists advice over the Dr in my GP surgery, nor would I accept it at my dental surgery, nor my pharmacist so how can an unqualified individual be considered to be qualified enough to do ANY of the above safely? I find these proposals ridiculous.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

All of the above mentioned. Time needs to be allocated for face to face appointments, administrative duties and triage appointments within a set clinic similar to how a GP and Dental clinic is run.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Interpretation of pre and post tests including IOP's, OCT, visual fields etc. all results must go through the optometrist regardless of how experienced an optical assistant may be

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

All additional qualifications such as independent prescribing for example need to have the real ent accreditation. This is for patient safety first and foremost and making sure practitioners act within their skills and not beyond them.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Whilst they have the knowledge and understanding of how lenses and prescriptions work, they do not have the required qualifications and experience to carry this out. The question is, what's the benefit of giving this responsibility to a DO when the Optometrist would in 99% of cases do a better job. Why are you even considering this?

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

The advantage would be cheaper Labour. The DO is cheaper than an optometrist. This is what it ultimately comes down to. There is no consideration to the patient, who in my opinion should be the priority for the GOC. If the general public were made aware of these considerations, I'm sure there would be outrage.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Incorrect prescriptions can cause falls, road traffic accidents, induce headaches, double vision and eye strain if incorrectly carried out. These symptoms would increase should changes be made and the perception of Optometry to the public would be further diminished.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Separating refraction from health checks has very little benefit. Very often the two are inherently linked. How would I know to look for a fixation disparity and potential prism in my refraction if I had not taken the history or performed a binocular assessment for example.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

From my own experience I refer 1/40 of my patients. I would assume for an experienced optometrist this would be similar, for an inexperienced optometrist this may be higher. If we improve optometrist skill set to manage more conditions, less would need to be referred. By giving more responsibilities to members who are less qualified means more pressure on secondary care.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

I have giving just one example above why this shouldn't happen. If you want further examples please do contact me

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Fitting contact lenses itself isn't a difficult task. Managing on going habits and preventing infections is where the difficulties lay. This must always be done by qualified practitioners because early warning signs and poor habits are a pre cursor to potential sight loss. All the legal barriers are necessary to be in place and selling plano and coloured lenses by unqualified establishments must be clamped down upon

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See above please

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

Under 16's and complex prescriptions being over seen by a dispensing optician is more appropriate than being seen by an optometrist. There should be a law where one dispensing optician is present on the shop floor at all times. Please take pharmacies as an example. No sale of any 'P' or 'POM' must be made without a pharmacist on site. Why do we not enforce this rule as well?

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/A

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

The barriers are there for a reason. No sale of contact lenses without a valid health check and prescription. We are not handing out sweets. These are medical appliances and the rules must not be relaxed

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Yes. How could it not be?! If relaxing the rules comes into force we may as well make optometry completely retail like my local supermarket and scrap all the rules.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

The rules are there to protect the patients and the practitioners too

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As mentioned above, it moved the profession further into the 'retail' environment rather than 'medical'
In my opinion Optometry is already going in the wrong direction and it must stop now

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Upto date health check including front and back of eyes, upto date spectacle and contact lens prescriptions including fitting and comfort checks

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The unregulated sale of plano and coloured lenses should be made illegal and sanctions must be taken to any establishment in breach of these rules. As I have said before, contact lenses must be treated like prescribed medication and not a packet of [redacted]

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Please see above. Patient care is always best if lenses are fitted correctly and follow up health checks are carried out. Failure to do so will result in increased secondary care appointments to treat infections, corneal ulcers and bring optometry as a profession down further.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

100%. The GOC has a direct responsibility and must be held accountable to implications of any relaxations of the rules, especially if professionals like myself are strongly against it.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If stronger rules were enforced the fitting of contact lenses would be perceived as a skill performed by a qualified professional. The ability to get plano contact lenses from a shop or online without relevant check ups would make the contact lens side of things in optometry seem unnecessary and an inconvenience. Until of course, they need someone to see them for their infections.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Spectacles and optical appliances should only ever be obtained from an optometrist and/or dispensing optician.

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Please see my previous answers

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

100%

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

Two years in some cases is actually quite generous! I would not be adverse to seeing patients yearly

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If it's not dated the prescription could be 10 years old. Would anyone be happy with a driver driving round in a prescription 8 years out of date? The answer is no.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Visions standards would remain high. Safer for the public. It would be down right dangerous to change the two year rule to greater than two years

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There needs to be an understanding of features and benefits of a frame or appliance for the task they are performing. I doubt even the most educated parent would know what tint is best for tennis, what type of lens is best for impact. This is what you would go to a professional for

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Sale and supply should be done by a knowledgeable member of staff with a dispensing optician on sight incase of any complicated queries. This should be a most basic of care we offer

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Technology can greatly enhance optometry as a whole if used appropriately.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

If a triage is done before a booked appointment, this would enhance the face to face interaction. It may also give the patient an opportunity to seek secondary care immediately if deemed appropriate. The danger is we go down the current GP route where it is impossible to get a face to face apt. This must not happen

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I'm not sure on what the rules exactly are but I would like to see more remote consultations for history, symptoms and advice. I'm not at all keen on this extending to binocular vision, ophthalmology or refractions which must be done on site in my opinion

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

N/A

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

n/a

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Optometry needs to be more professional and medical and less retail. Sight tests timings must be standardised at a minimum of 30mins. Sight tests must never be free for non NHS patients. The business aspect of optometry is going the wrong way. The time with a profession must be valued appropriately. The mark up on spectacles and accessories can be reduced so that salaries can be higher. We must not have free eyetests that last 15mins with an optometrist not getting an appropriate lunch and working long hours for reduced pay.

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I have too many examples to fit onto such a small page I'm afraid!

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Personally I think it looks needs to be reviewed. Optometry is becoming the laughing stock of the medical world. A good optometrist is now considered someone who can make money for the business with little regard for patient time and safety. This I feel is criminal. The GOC need to stand up and act. There needs to be complete reform. There needs to be some responsibility taken from above for patient care and safety.

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I think the above non professional criteria is ok. It's the professional criteria I have issues with

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

Disgusting that you are constantly devalueing our profession sitting in the pocket of [redacted]

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Everything i have spent 5 years of my life studying then the following 10 years in gaining cet/cod points

How can you allow someone without this degree to refract a patient? Unbelievable. Will they have the knowledge to know a myopic shift may indicate cataracts

A hyperopic shift may indicate macula issues?

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Everything. As it is now. Also you are happy with us doing the work of GPs with no protection! I have GPs asking me to diagnose strokes?!

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Stop trying to ruin my career. Nobody on your board should be associated with high street brands such as [redacted] to push their agendas

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

DO does not have the knowledge of everything that needs to be known. You are simply increasing optoms workload

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Leave it as it is

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

Health check and refraction goes hand in hand

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Leave it to the optom

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Lots of CL related issues

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

No

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No eye examination. Rx would be out of date - failure of visual standards. People driving when they shouldn't be

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See above

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Common sense

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes - a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

You need to physically examine a px to conclude an eye examination

Pxs are unreliable in their history

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

You are putting the public's health at risk. As an optom you are making my job harder as I will need to correct mistakes

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Stop. Now.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

You are a risk to the profession. The goc has done nothing to protect its registrants.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Talk to us. Email me.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Stop having [redacted] and co influence public safety

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

The sale of spectacles and contact lenses. They shouldn't be allowed to be sold online.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

The fitting of glasses and ownership of businesses should only be allowed to those on the goc register. Skills are required to perform duties and they aren't taught properly to those who aren't qualified. This is my experience in almost every place I work.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

No

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

The only reason dispensing opticians being allowed to do this is to keep labour costs down. The skill to my job is identifying pathology as well. Dispensing opticians aren't trained to identify this.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

The only reason to allow this is to get labour costs down. There is nothing positive to this move.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

I work in Scotland. We have several levels of what we can claim as an eye exam. It works well.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The regulations should be tightened and the goc given power to prosecute those who sell lenses online illegally. In fact, online contact lens sales shouldn't be allowed. They are a medical device and should be treated as such.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

I'd they were changed to make it easier to obtain them, yes. If the registrations were tightened so those selling without an rx online could be fined then there would be less complications results from inappropriate lens use.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Making this less stringent would result in dad more complications.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

This must be tightened and those selling these devices without a prescription should be prosecuted.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It's too lax. There must be a deterrent to those who sell these items without an rx.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

Online sales should be banned. I rarely see a pair of glasses ordered online that is a good fit or meets the correct measurements. People order them without the appropriate measurements.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

Online sales should be banned. Most I see are inappropriate for the patient.

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Online sales will take over and there will be more problems for those in practice to deal with.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Online sales shouldn't be allowed. There's little verification of whether a pair of glasses is appropriate for the patient. Incorrect measurements, poorly fitting frames etc.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Ban online sales.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction
Sale and supply of contact lenses
Sale and supply of spectacles for u16
Remote refraction
Contact lens fitting
Myopia management
Mecs/cues

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction
Sale and supply of contact lenses
Sale and supply of spectacles for u16
Contact lens fitting
Myopia management
Mecs/cues
Independent prescribing (those with qualification)

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Behavioural optometry

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Behavioural optometry/visual stress testing - I think it would be more reassuring if accredited. V easy to exploit patent concerns about dyslexia

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

So much of the refraction crossing back to the examination. For instance doing amsler if Nv reduced. Knowing what is likely to be expected if there is a corneal or retinal defect.

Definitely not in best interest of the px or the prescribing optometrist

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

I'm sure it would be financially appealing to certain business models as a cost cutting measure, but the pxs are going to feel they are on a conveyor belt and it won't be clear who is ultimately responsible for their eye care.

It is less px focussed and more difficult to build a relationship with the px if only working on one part of the exam.

Optometrists are trained to understand the relationship between refraction and ocular health

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The refraction and ocular examination are intrinsically linked. The advantage of an optometrist continuing with both elements is the continuity of care regarding pathology and vision.

I suppose for businesses, if they could get patients/customers refracted independent of the ocular examination, it would be more lucrative. However, multiple pathologies risk being missed.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

protects the public from harm of buying without professional fitting and checks.

Already people are choosing what they want on offshore online sites. they might think one lens fits all, but I have seen some terribly poor fitting self-chosen lenses.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Those with prisms, myopia management lens pxs, Complex rxs - all need proper heights, centres, bvd measured.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Advantage - correct appliances provided giving optimum visual performance

Disadvantage - costs to px vs online sales.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

None at all. Online sales without prescription are not chased by GOC, nor are Plano coloured/party contact lens sales.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Though a tightening would be great at protecting the public from harm

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Would just open up even more the possibility of pxs inputting the wrong rx or pick n mix style CL ordering

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

An assessment by Optometrist or Contact Lens Optician to verify the current contact lens specification, adjusting the fit and/or RX as required. Including assessment of the anterior eye for any contact lens related changes.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

However, the GOC do not act upon the sale of Plano contact lenses at all as far as I can see. It's a farce.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

If made easier, who would be giving advice on I&R, lens care, cleaning, do's and don'ts?

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Do not allow the sale of Plano contact lenses other than from registered optometrists/CLOs

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No follow up by GOC at all - farce

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

na

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

We have all seen pxs who have ordered varifocals online with terrible heights and can't use them.
Also pxs who have not typed the correct rx and ended up using a near/int rx for driving,

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

why bother getting an eye exam? An eye exam is far more than just a glasses prescription.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

protection of the public

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If plano, I don't see why they couldn't order the same as an optical practice, but for Rx lenses, it should be by registered person.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

protection of the public

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

keep as is

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Perhaps thinking about [redacted]

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I am incredibly concerned about the concept of remote refractions and their accuracy. The potential to miss pathologies, send customers (not pxs) out to drive or operate machinery in spectacles prescribed in this way is frightening.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

If they are doing it now, then the Act regulations need to be tightened to protect the public, and the profession as a whole

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

see above

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

not sure

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Supply of spectacles and contact lenses should be under supervision of a DO or Optom. Internet contact lens sales without prescription should've stopped. Internet sales of specs should be ready readers only. Prescription specs should be from registered practitioners only

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Companies supplying Eyecare, spectacle dispensing or contact lens supply should be doing this face to face. Staff who are not registered as DO or optom should work under supervision. Internet sales of contact lenses without prescription should be stopped

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

No

Please give your reasons and provide any evidence to support these.:

In Scotland, a designated optometrist inspects every practice every 3 years to ensure nhs standards are met. Any GOC inspection would be unlikely to have different findings and as such they should utilise their resources doing other things rather than duplicating the work of others.

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Many patients view the refraction as the eye test. So a DO could refract a patient, and that patient could have a sight or life threatening eye condition that is not seen because the patient believed they had an eye test and didn't consult an optometrist. DOs could do optometry degree or conversion course if they wish to refract and just move to optometrist role.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Dispensing optometrists could potentially take jobs away from optoms as they would be paid less. Patient care would be compromised as no health checks. If DOs want to refract then they can retrain as an optometrist.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

DOs work alongside optometrists. They have colleagues standing next to them who can refract. They have no need to do it.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Legislation currently is robust. Eye tests in Scotland are free for all via NHS. Cheaper refraction only tests by DOs are not warranted and carries a high risk of patients believing they had a full eye health checkup when they didn't. This could lead to sight or life threatening pathology being found too late.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The GOC should do more to protect the public and it's registrants from internet supply of contact lenses where patient just picks a lens they want to buy without fitting or aftercare.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

The rules are flouted by internet sales. As such the barriers are walked over not prohibitive.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

No

Please give your reasons and provide any evidence to support these.:

Changes would be beneficial

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Prescription should be verified in writing. In my experience, this happens in practices. You can buy anything you like online without prescription. Every optometrist has stories of eye health problems relating to patients self prescribing lenses online and receiving no aftercare .

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

A minimum of annual aftercare to allow contact lens supply. This should include full history and symptoms. Assessment of anterior eye health and lens fitting. Review of cleaning, hygiene etc.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

No barriers. Legislation is completely ignored by non registrants who probably don't even know contact lenses are potentially harmful if not fitted correctly by a practitioner.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

No

Please give your reasons and provide any evidence to support these.:

The risk already exists and GOC don't do anything about it. Whilst I understand there is no influence over non registrants eg a high street clothes shop selling lenses, the GOC can tackle this problem through the lens manufacturers

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not Answered

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Risk of harm currently due to people self prescribing lenses. Zero powered lenses should meet the same legislation as a powered lens.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

The 2 year expiry exists to protect the public and encourage routine due tests.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The person would not have any eye health checks and potentially could be purchasing an incorrect prescription that no longer meets their needs. This could for example lead to a more rapid myopic shift if prescription isn't updated.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

2 year expiry protects the public from ignoring or not knowing they have eye health conditions.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Incorrect prescription being issued or incorrect fitting/optical centres could be detrimental to the child. DOs and optometrists are perfectly capable of prescribing sports goggles to correct requirements at a reasonable cost. I work in a practice where we regularly supply these to local football teams.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The current legislation is robust,

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Current legislation is robust

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Dispensing optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

See below

7 What activities do you think must be restricted to our registrants?

Please provide details.:

See below

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Qualified suspension opticians should be trained to refract.

On the high street there is a massive shortage of Optometrists and as a result the public can not book eye exams.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes - with no restrictions

Please give your reasons and provide any evidence to support these.:

Massive shortage of Optometrists means the public are currently waiting unhealthy amounts of time to book appointments for new glasses. This is poor service and a danger to the public from our profession.

Surely our well trained Optometry colleagues would be better suited to looking at eye problems and referrals rather than a basic refraction?

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Positives

Refraction appointments would be more readily available to the public.

Optometrists could concentrate on seeing more eye problems from the time free'd up from refraction.

As a note I would argue every optometrist who argues against this does so with a financial motive. They will be worried they loose their jobs or receive pay cuts as they perform less 'commercially viable' jobs.

This however, is not an argument that helps out the public.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Low percentage of overall eye care, varies depending on clinics but approx 10-15% may have eye problems.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Contact lens opticians are allowed to refract with regards to contact lens prescriptions and currently do so successfully.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/a

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

Na

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Na

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Is it safe and in the public interest to buy optical appliances from unqualified, unregulated people with no regard form the prescription- absolutely not. But it's the whole thing that's not in the public interest, not just the prescription

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Na

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Na

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Na

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

The profession and the public need greater protection from unregulated internet providers

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Dispensing out of date prescriptions

Dispensing multifocals

Dispensing high prescriptions

Dispensing out of date contact lens prescriptions and dispensing contact lenses without prescriptions

7 What activities do you think must be restricted to our registrants?

Please provide details.:

As much dispensing as possible

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

There needs to be better regulation than previously outlined. The internet has exploded since that review and community optometrists are left picking up the pieces of injury caused by contact lenses. We see people who have delayed a sight test after obtaining cheap replacement specs when they should have had a sight test leaving them with unknown pathology

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

Public safety is a massive advantage of regulating business's better

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

Refraction shouldn't be a standalone function

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Patient care would suffer if the refraction is separated from the eye health examination

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It will keep the public safe as it has done for years

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

8-12% on average in my practice

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I have seen many patients wearing badly fitting lenses and the wrong Rx when purchased from the internet. Parents seem to be keen to buy lenses for their children with no professional guidance

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Patients with a recognised capacity issue

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

People get very confused when buying optical appliances and registered professionals are best placed to make sure they have the correct guidance

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

People like to change their own prescription with no guidance

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This never happens and we see the consequences often of poor fitting lenses and lenses being worn inappropriately

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

I've seen many corneal ulcers and serious abrasions from these lenses

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There is not enough protection from these lenses. It is never enforced

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

No

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

People use and or input prescriptions incorrectly themselves. They use old prescriptions and delay sight tests

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

It's never checked or adhered to. Even if it is checked they'll dispense with one day left on the date

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

High street optometrists depend upon the sale of spectacles to support the clinical activities. The fact patients are actively encouraged to take their prescriptions elsewhere will cause a huge problem in the future.

We need proper payment for our clinical services from the nhs

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

There is going to be a huge eyecare gap with people who can afford to pay privately and those who can't.

GOS does not work anymore

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Under 16's should be protected in all areas of dispensing

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The potential for lifelong permanent damage to a child's eyes by wearing the wrong Rx is not something that is appreciated by parents

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Nothing is currently enforced anyway

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

The current sale and supply is not enforced

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients would be safer

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Although the potential for harm from remote consultations is there. Differential diagnosis over the phone is very difficult even with video calls

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

No

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

No

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

No

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Online does not seem to be regulated at all. Patients can adjust their own prescriptions as they want

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Make them be GOC registered to sell appliances in the uk so they are as rigorous as we are about quality and accuracy. There is always the excuse "the supplier is registered outside the uk" I can't purchase medicine from outside the uk, that seems to be regulated well

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

We need the ability to penalise patients who book appointments then fail to attend. Either with an upfront deposit or a fine. We have a 20% no show rate despite calls, email and text reminders

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

We should be able to refuse to see a patient if they have been verbally abusive. The GOC don't protect practices from the public

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The reflection statements on CPD are a burden that is not needed

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

No

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Carrying out eye examinations including refractions. Refracting is actually very skilled and experience proves this.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Initial examination and CL teach under supervision.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Visual acuity and refracting is linked to eye health and pathology. Optometrists are best skilled to carry these out!

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Pathology would not be missed.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Not Answered

If yes, please provide details of the evidence and where it can be obtained.:

A lot but as optometrists are highly skilled- they are also able to manage a lot of these in practice!

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Current model works well.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

N/A

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Wrong rx given to px!

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Prevent eye problems as pxs are. It adequately educated on risks/benefits!

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Na

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

They might not see as well as they should! Missed pathology!

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

NA

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If didn't fit properly- wd get eye strain

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

NA

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

NA

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

NA

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

I'll fitting glasses are a huge problem. If bought online they usually are.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

NA

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction
Ophthalmoscope
Funded examination

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Symptoms and history
Refraction
Ophthalmoscopy
Slitlamp examination

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

No

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

No patchily will be taken into account during refraction

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

2/20 patients referred

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Inaccuracy

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Can be harmful

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Inaccuracy

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Inaccuracy, pathology missed, if driving standard not met!

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No disadvantages

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

None

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Xxx

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Inaccurate measurements

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Should be restricted

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Minimum eye test time should be implemented!!

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Patients' Refraction and ocular health examination

7 What activities do you think must be restricted to our registrants?

Please provide details.:

The full sight test and all its contents

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Years of clinical training to understand the clinical decisions made during refraction

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Not sure / no opinion

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Same reason as mentioned regarding refraction

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Not sure / no opinion

If yes, please specify what you think the definition of aftercare should be.:

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Negligence to patient care. Missed health checks

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Remote sight tests poorly regulated. Lose patient interaction and may miss vital details

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

[redacted]

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Unsupervised sale of contact lenses and glasses online, the patients always come in complaining with problems

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Refraction

Binocular tests, prescribing prisms

Testing children

Testing vulnerable adults

Eye health check includes: slit lamp, and direct and indirect ophthalmoscopy and interpretation of fund is photos

Dispensing high prescriptions

Dispensing children

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Refraction

Binocular tests, prescribing prisms

Testing children

Testing vulnerable adults

Eye health check includes: slit lamp, and direct and indirect ophthalmoscopy and interpretation of fund is photos

Dispensing high prescriptions

Dispensing children

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Patient safety will be comprised as they will not be able to distinguish whether their eye health has been checked or whether they have just had a refraction. The elderly in particular may not seek medical help if they think they were seen last week - when in actuality they saw DO and not an OO. How will a DO determine the need for prism if no cover test has been done. What if diplopia patients are corrected with prism when actually they needed a referral for nerve palsy. What about dense nuclear cataract Patients that need referral for cataract extraction rather than new glasses, then by the time

they are eventually seen the cataract is too dense and causes surgery problems. What about managing the expectations of patients who think their new glasses will give them clear vision but they have not been told about their cataract/amd/erm/dry eye and their expectations managed. What about children who control their exophoria by accommodative convergence who are then prescribed glasses for hypermetropia by a DO.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It prevents the following scenarios: patients not seeking an eye test because they believe their eye health has been checked when actually they have just had a refraction. The elderly in particular may not seek medical help if they think they were seen last week - when in actuality they saw DO and not an OO. How will a DO determine the need for prism if no cover test has been done. What if diplopia patients are corrected with prism when actually they needed a referral for nerve palsy. What about dense nuclear cataract Patients that need referral for cataract extraction rather than new glasses, then by the time they are eventually seen the cataract is too dense and causes surgery problems. What about managing the expectations of patients who think their new glasses will give them clear vision but they have not been told about their cataract/amd/erm/dry eye and their expectations managed. What about children who control their exophoria by accommodative convergence who are then prescribed glasses for hypermetropia by a DO.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

I see roughly 16 patients a day and probably average a referral a day.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

No disadvantages

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

There are countless online readers selling contact lenses without prosecution.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Microbial Keratitis does not distinguish between Plano or powered lenses

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Microbial Keratitis does not distinguish between Plano or powered lenses

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

You can still dispense in the patients best interest

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Europe and the company [redacted] do remote eye tests
dj

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

No

If no, please provide details.:

I think there should be an additional objective to ensure that internet / technology based optometry is not allowed to continue in the current format with no regulation. This poses a risk to the public.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

I believe the current set up is acceptable where non registrants may assist with the provision of eyecare but must be under the supervision of a registrant.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

The sale of spectacles and contact lenses online. There are very little checks on specifications and patients self prescribing is a huge risk to public health.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Yes - The sale and supply of all spectacles and contact lenses.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

I believe there could be scope for dispensing opticians to obtain a refraction qualification so long as a registered optometrist completes the eye examination with an internal check of the eye.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

No

Please give your reasons and provide any evidence to support these.:

Any business that supplies spectacles or contact lenses should be required by law to register with the GOC, including online businesses, to remove the risk to the public from unregistered persons.

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Yes

Please give your reasons and provide any evidence to support these.:

All suppliers should be required by law to register, protecting the public by ensuring consistent standards.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

Absolutely, the aim of inspections should be to help and support but also to ensure that standards are maintained.

I am very surprised that inspections are not performed.

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

I believe the pharmacy model is a good starting point and a similar set up in optometry may be beneficial.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes - under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

Perhaps with an additional qualification in refraction they could refract the patient and the optometrist can review this, perform the internal examination and complete the eye examination.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

It would offer career progression to dispensing opticians.

There would be a financial benefit that an optometrist would be able to perform more eye examinations, this would also help the public in areas where demand outweighs supply.

This would also free optometrists to provide additional services such as MECS, glaucoma management etc.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

I believe that an internal examination is an essential part of an eye examination. If a patient has reduced visual acuity, how else would you know if it is due to a poor refraction or underlying pathology? I also think that both parts of the exam should be completed at the same time.

Separating the internal and external components I believe would lead to sub par refraction only examinations that would not detect underlying eye conditions and would pose a huge risk to public health.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The main advantage is that the examinations are thorough and early detection of any pathology will have a positive impact on prognosis.

I believe the public are used to the current set up and most people can access good quality healthcare either privately or via GOS.

I cannot see any negative impact from the current system continuing.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

I would not be able to give an exact number. There are many variables, if you work in a city centre practice with a young customer database there will be less than if you have an older patient database.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Not specifically but I have heard of examples of other practices that have performed refraction and planned to complete the internal examination at a later date which has not happened and pathology has been missed.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

No, in fact I believe that the fitting and supply of contact lenses requires more regulation.

I know many hospital ophthalmologists are worried about the complications they see from patients wearing unsuitable lenses.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The main positive is the reduction of risk to the public as the patient will be wearing an appropriate lens and will have had the specifics about wearing times, hygiene etc. explained to them.

Financially, competition has driven the cost of lenses downwards and I believe they are affordable to most people. There is also the option to use GOS vouchers towards contact lenses.

The disadvantage is that it can scare patients into simply ordering lenses online which creates a risk to the public as they may be the incorrect prescription or poorly fitting,

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

U16 patients especially, making a mistake in the plastic period could cause reduced vision for the rest of a child's life.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The positive is the direct involvement of a registrant should reduce the risk of harm occurring to these patients.

I don't see any negatives as GOS will cover the cost of most spectacles so everyone should be able to access eyecare within their budget.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Patients should be able to order contact lenses using an in date, signed specification issued by a registrant.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

If the requirements are relaxed too much then I can foresee issues where patients do not have regular aftercare. Errors could be made in the power of the lenses as well as with asthology being missed. With contact lens wear it is important to intervene at the earliest signs of pathology.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Although this was relaxed during COVID, I don't think that in the long term this would be good for patients.

Some online sellers perform very little verification currently, this needs to be addressed.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantage to the patient of no verification would be a quicker transaction, however the advantage of the verification would be a lesser risk of an error occurring.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Yes I do, anyone that supplies contact lenses to a customer should be accountable for their aftercare and detecting any early pathology.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

It is important to protect the public from harm when buying these products.

To the previous question, the seller should be accountable for their aftercare.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

We could see a huge spike in contact lens related emergencies from poorly fitting lenses and poorly educated patients.

This would create additional workload for the already struggling hospital service.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Stronger legislation is needed to prevent the sale of a medical appliance with no follow up.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The negative is that it is confusing, many people don't understand the risks of cosmetic contact lenses.

The positive would be that we minimise the risk to patients.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I think that the fact the GOC cannot regulate illegal online supply is creating an uneven playing field for both customers and businesses.

Customers are buying spectacles online which can potentially be poorly fitting and may not meet current British standards. This could cause a significant risk to the patient and the public (for example if the patient crashed their car and was found to have poor eyesight due to ill fitting varifocals).

I believe that more regulation is required and the onus should not be put on the consumer.

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

There would be risks of poorly fitting spectacles, induced prismatic effect from incorrectly measured spectacles causing binocular vision issues, risk to the public from patients potentially having poor vision due to poorly fitting spectacles or them not meeting British standards.

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

There needs to be regulation of standards to ensure patients are buying products that are fit for purpose and correct their vision accordingly.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

The recall placed by the optometrist needs to be respected, there is a reason why that recall has been chosen.

Many patients have changes in their prescription after 2 years. The examination is also an opportunity to detect and manage eye disease.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Financially patients would be able to order spectacles without having an eye exam.

The disadvantage would be that the prescription has not been checked for accuracy and the patient by missing out on the eye examination may have undetected pathology, Significant eye conditions such as glaucoma are asymptomatic in the early stages but if left undiagnosed would have a massive impact on the patient's vision.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The advantage is that the prescription will be accurate and the patient will have had a full eye examination that could detect pathology.

Financially patients may be disadvantaged as they need to pay for an examination but GOS should help everyone to access eyecare within their budget.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Children have rapidly developing eyesight and making errors in prescriptions could have long term consequences.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The ensuring that the prescription is suitable for the child in question.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Not sure / no opinion

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Unsure

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I believe technology can aid us to provide better care for everyone, especially those that struggle to access mainstream optometry.

It should still be overseen by a registrant.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I think it could improve accuracy, capacity and aid the early detection of pathology.

Self prescribing should be avoided, an optometrist should still be consulted through the process.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I believe we should explore technology but with caution to ensure public safety.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

I think the GOC needs to be clear how we can use new technology to improve patient care, not to cut corners and make more profit.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

By ensuring that all providers of optical appliances are registered and regulated by the GOC, including internet providers.

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

.

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Student optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

Absolutely. There is pressing case for optometry to be reshaped. Across the NHS, large reform are taking place and I am excited that the GOC has stepped up to allow optometrist/others to take the wheel and determine our future.

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Referrals to hospital/specialist

Seeing children under the ages of 16.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Seeing children under the ages of 16.

Making referrals to hospitals/GPs/specialist

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should not be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should not be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

The optometry workforce has transformed and with technology, that transformation is likely to grow. I think it's time the GOCs rule regarding what non registrants can't do changes too.

Registrants and non registrants should perform the same activities expect where children are concerned due to safeguarding.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

I think there is merit to allowing a variability in bodies (that is non-GOC) that regulator post qualification. This will allow more varied skills in the workforce that can respond to challenges. It will also allow students from remote and isolated regions of the county to find a training provider closer to home so that they can fill any gaps in the work force locally.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Not Answered

Please give your reasons and provide any evidence to support these.:

business inspections will boost confidence in the profession among the general public and protect staff that are afraid to speak up against unsafe conditions.

It will also allow the GOC to generate a new source of income so that perhaps they can lower the membership fee for registrants

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

business inspections will boost confidence in the profession among the general public and protect staff that are afraid to speak up against unsafe conditions.

It will also make whistleblowing easier

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – with no restrictions

Please give your reasons and provide any evidence to support these.:

I strongly agree with this point. Our roles overlap already and dispensing opticians have great anatomical knowledge of the eye and are already skilled in lens selection.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

It would allow eye test services to be more widely available across the UK. It will bring dispensing opticians and optometrist closer in the professional and overall increase skill share and confidence from the general public.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantages including a shrinking workforce that can't accommodate sight testing for the whole of Britain. Some regions don't have optometrist but plenty of dispensing opticians- these regions will continue to miss out on optical services.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

SUPPORT: Every 6 minutes someone is told they're going blind. Separating sight test and health check will ensure there is more health related service for eye disease. Most eye tests are routine and simple so separating the two will hopefully reduced demand on health related eye check up need

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Children should be seen by optometrist ONLY

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Safety
Professional that comes with GOC code of conduct
Less risk

This all assumes a registered optometrist perform this

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

No supervision should be required

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

No

Please give your reasons and provide any evidence to support these.:

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

Px might need it urgently
It gives too much power to one supplier.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

No

If yes, please specify what you think the definition of aftercare should be.:

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Yes

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Less risk to the public because more companies can sell glasses rather than one company having a monopoly and inflating costs

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

No

Please give your reasons and provide any evidence to support these.:

The GOC code of conduct protects consumers. Companies should be registered to it too, therefore removing the need for the the sale of optician appliances ACT

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Yes

Please give your reasons and provide any evidence to support these.:

Most people's prescriptions does not change.

Not everyone can afford a two yearly eye test cost, can be absolutely unnecessary if your prescription hasn't changed

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

This is the current normal practise in East Africa where I'm from and first become interested in optics.

It will allow consumers more purchasing power. It will allow some rural remote parts of the UK to have access to optical appliances readily.

I think allowing non registrants to sell glasses without a valid prescription will align the UK optometric practise with our global partners and neighbours. It will also remove unnecessary bureaucracy. It will also give the optical workforce a better image in the UKs mind and create a positive hassle free perception for us.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Disadvantage: many rural parts of the UK don't have access to optical services and will continue to be left behind.

Too much bureaucracy can leave a negative mind in the consumers mind and the general public's view of optics .

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Not advantage . Risk of abusing powers by non registered people with no code to stick to

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Allow kids to access glasses with safety

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Makes services more easily accessible

Ophthalmologist already use remote care

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not Answered

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Remove the requirements that the completion of Stage 1 certificate expires. After students graduate, students should be able to take up to at least a 5 year gap between completing their degree and completing the scheme of registration.

Life

53 Are there any other gaps in regulation where you think legislative change might be required?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Yes

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Selling contact lenses. Supplying spectacles to ANYONE. Selling 'tinted lenses for driving at night', which are legally too dark for driving at night!

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Selling contact lenses. Supplying spectacles to ANYONE. Selling 'tinted lenses for driving at night', which are legally too dark for driving at night!

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Supplying spectacles for under 18s.
Tinted lenses for Visual Stress.

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

No

Please give your reasons and provide any evidence to support these.:

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Yes

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

No

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

I think it would be wise to stop 'refraction assistants' performing 'eye tests' and the only way to stop it is to increase the GOS ST fee and legislate to prevent it.

14 Is there an alternative model of business regulation that we should consider?

Yes, another model (please specify)

Please give your reasons and provide any evidence to support these.:

The current model doesn't seem to promote the interests of NQ optometrists working for the 'high street', who may be too concerned to raise their concerns about business practice. Whistleblowing is still a traumatic experience.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

I think DOs refracting under supervision would be a far better system than unqualified 'refractioners' who currently do it under supervision in the high street.

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

Advantages would be increased efficiency with regard to clinics.
Disadvantages would be risking de-skilling optometrists who rarely refract.

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

I think if there is reform, calling an Eye Examination an Eye Examination, rather than a 'Sight Test', makes it more comprehensive. The language used is incredibly important when describing what something actually is. Technically a 'sight test', by definition (outside of the Optician's Act) is literally measuring someone's sight.

The current problem with legislation is mostly due to [redacted] and their interpretation of what needs to be done. The latest [redacted] looks like it was written by [redacted] not by the [redacted] Uni legislative reform, with an increase in political and public awareness of the importance of optometry, and an appropriate increase in NHS remuneration (including for myopia management), there will be massive problems in the near future.

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The problem is with NHS remuneration. A modern comprehensive eye examination to determine prescription and ocular health, should include diagnostic tests which cost considerably more than the NHS is prepared to pay. There is also a considerable gap between the ethics of myopia management and the reality of what occurs, due to the lack of funding from the government.

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

Personally, as an optometrist, I manage as many things in primary care as I possibly can.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

From my experience the general public, because of poor awareness of ocular health, would leave their eye problems until they were really bad, increasing medium and long-term complications and causing increased costs to society in the long run.

Ophthalmology departments in hospital are usually the second busiest departments partly because of the incidental findings from routine eye examinations, which shows there are a lot of eye health problems around!

I think separating the GOS sight test from eye health checks, such as glaucoma assessments, as is done in Scotland, with appropriate remuneration, would be a good idea.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

The biggest barrier to public safety is the GOC not clamping down on unregistered supply of contact lenses.

I know of parents who buy their highly myopic children contact lenses online by 'making up' the prescription, because there are not enough built-in safety checks.

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The biggest barrier to the health of the general public is the GOC not currently pursuing unregistered suppliers!

The second biggest barrier is online sellers not requesting a copy of a valid prescription.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Drivers.

Ideally everyone.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The cost of restricting supply to drivers would be mostly borne by the general public at the point of sale. There would probably be 8% less traffic accidents as well!

The cost to society if sale and supply were restricted to everyone would be diminished, because a general public who have up to date spectacles would be more efficient at day to day life. There would be less sick days from headaches and migraines for example. This would probably be a big shift towards national universal NHS eye examinations. Although an initial big outlay, it would save money and certainly improve outcomes in the future.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

There are not enough barriers in place for people to purchase contact lenses online. I know of parents who 'make up' prescriptions for their myopic children, and order them online very successfully, with no regard to aftercare!

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Not if they got stricter.

I feel having a tick box online to say 'the prescription is valid' is not an adequate safeguard for checking aftercare measurements are in place.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

I feel it has been many years since anyone has requested a contact lens specification to be verified. I imagine no one bothers anymore, due to the GOC being inefficient at regulating unregistered sellers!

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I don't think anyone bothers to verify prescriptions anymore as it has been many years since anyone has requested a contact lens specification to be verified. I imagine no one bothers anymore, due to the GOC being inefficient at regulating unregistered sellers!

I think it would be very simple for remote sellers to be able to request a copy of a valid prescription as part of the ordering process. I feel that there should be legislation to improve the GOCs power to pursue non-registered sellers.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

A check of contact lens prescription and the health of the anterior eye for adverse effects of contact lenses at a minimum of 2 years frequency for infrequent contact lens wearers and annually for regular contact lens wearers.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

It is still too easy to purchase zero powered contact lenses, due to the GOC not having any (financial?) interest in pursuing unregistered sellers.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

I hear tales of people sharing contact lenses bought online. I feel there needs to be tighter regulation of all contact lens selling!

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Legislation needs to improve the GOCs power, as much as anything!

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I think the risk is quite low, but still significant, of adverse effects from contact lens wear, as guidance of supply is not enforceable.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

There is a slight barrier to new developments if all optical appliances are regulated. I do not feel that it is significant enough to deregulate to whole market!

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

There would be a risk that prescriptions were incorrect, headaches would abound, glasses would be ill-fitting. Myopia would increase more dramatically (how many online sellers have done CPD in myopia management?!)

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

It should probably be extended to under 18s, due to the increased screen time and risk of myopia increasing.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

Registered opticians can supply outside of two years, if it is required. There needs to be a time limit and two years is an appropriate one.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The risk to productivity, and driving are the biggest ones. There is always a risk of underlying eye disease and general health disease not being picked up at routine eye examinations.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I think staying as it is would be an acceptable option.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Deregulating would be slightly cheaper for the end user, because non-opticians DO NOT HAVE TO CROSS SUBSIDISE THE NHS!
I'm not sure it should be just about cost, though. A poorly fitting sports appliance could cause more injury than it is designed to protect from.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Not many.

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

I think the GOC need to look at myopia management seriously and not bury their head in the sand like [redacted] want them to!

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Not a whole lot.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Digital imaging is becoming more commonplace. I think there is a view that an OCT is better than ophthalmoscopy. Which it is, but only for the central retina.

An optomap image is probably better than dilated ophthalmoscopy - it depends who you ask. I would argue that dilation is unnecessary in most people if they've had an optomap.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes - a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Digital imaging makes second opinions a lot easier to obtain.

Remote care can increase the risk as a lot of optometry entails physically examining the anterior chamber.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

The vagueness of the current Act, and woeful underfunding of the NHS ST does preclude most people, especially those entitled to NHS funded tests, to state of the art examinations in the 21st century.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

There doesn't appear to be a minimum requirement for remote testing, or indeed a significant amount of guidance on remote care.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Mostly by either increasing the NHS ST fee, or allowing us to charge patients for the use of state of the art technology!

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

GOC policy appears to be let unregistered sellers do as they please! I think legislating to give the GOC more power to regulate unregistered sellers would be appropriate.

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

I think legislating to give the GOC more power to regulate unregistered sellers would be appropriate.

I think having unregistered sellers having to keep records of appliances sold, along with copies of valid prescriptions for appliances sold, would either put them off selling, or improve standards.

I feel a lot of issues are international (including the tax collected on sales), which could be legislated for. The GOC could maybe even lead the way forward with regard to legislating for taxes paid and laws applied where products end up, rather than point of origin!

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Either universal NHS funded eye care, with improving remuneration; or just improving remuneration!

Myopia management is an area which needs more promotion.

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Supervision of unregistered people performing registered roles: the 'refractioner'. When there are six refractioners supervised by one optometrist then the world is a poorer place.

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

DOs should get a grant for CET.
Also they should get more recognition.

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Supply of contact lenses

Supply of High powered spectacles above +/- 5D

Supply of Varifocals or bifocals

Supply to children (CL or Spectacles)

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Supply of contact lenses

Supply of High powered spectacles above +/- 5D

Supply of Varifocals or bifocals

Supply to children (CL or Spectacles)

Examination

Contact Lens Aftercare

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:

Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:

Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Why are you asking the same question multiple times?

Supply of contact lenses

Supply of High powered spectacles above +/- 5D

Supply of Varifocals or bifocals

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

MECS

Myopia Progression Lenses (CL and Spectales)

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Not Answered

Please give your reasons and provide any evidence to support these.:

All businesses should be required to register.

The fact it is voluntary means it is a farce.

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

The concept of present needs to be defined particularly in the culture of work from home.

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

Yes – under the oversight of an optometrist or registered medical practitioner

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

With an appropriate qualification, many would help in the role of completing an examination and while the GOS fee is ridiculous and does not reflect the optometric qualification

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The examination fee is unsustainable in the modern world and has always been supplemented by products. This is an unhealthy situation that has led to overprescribing, incorrect prescribing and high product margins allowing internet suppliers to undercut the professional and ultimately make the profession unstable and unsustainable.

How can a practice keep pace with new technology on £22?

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The status quo isn't working.

I see many MECS related appointments that would have previously been resolved at a CL aftercare. As many patients are avoiding these, vision is being put at risk by unregulated CL supply.

The GOC and [redacted] have done very little to raising awareness of this with the public and many patients now believe them to be unnecessary.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Incorrect supply of optical appliances disproportionately affect these groups.

Unregulated CL supply to under 16s is a form of Child Abuse by definition.

Our profession has done little to recognise this as a problem.

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

But but it is not working because you do not require companies to register. You do not promote good CL wear with the public and it is your role to protect the ocular health of the nation.

Creating a buy from Registered CL Sellers would help.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Ocular health is already suffering and other resources ie A&E MECS services are picking up the pieces.

I regularly see infection and inflammation relating to CL wear of patients who have not had aftercare check ups at all or recently. Some have not been seen for 10 years.

As regulator you are failing all of these patients.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

It is largely ignored by the online CL retailers.

Many patients just order the power of their spectacles and swap lens types at a whim.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The fact you have included this question fills me with fear.

Tighten the legislation, not loosen it.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Fit

Suitability

Wearing schedule

Surface health

Visual acuity

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Every Halloween, we see the result of no checks on eyes and "Party" shops and online retailers not checking current regulations.

This endangers ocular health and further shows how ineffective current rules are.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

see prev entries

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

Of course.

How many eyes need to be impaired before you will act.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

It is failing so why not change

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

I think your question is poorly worded

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

All of the previous answered points

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

If we didn't need legislation, we do not need a regulator and the eye health of the public would deteriorate further.

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

It at least gets across the need for regular eye health checks.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I find it hard to believe again that you the regulator is even thinking this.

Ocular health in the UK has been in decline relative to other western/European countries because of poor supply and regulation.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

If you wish to continue to fail people - stay the same.

Prescription from unregistered sellers continue to be supplied incorrectly and not fit for purpose.

Besides consumer law, the Opticians Act does not prevent it as it stands. Consumer law, just means it is not a financial burden to patients.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Yes

Please give your reasons and provide any evidence to support these.:

Current regulations do.

Sportswear is only worn for a short period of time and should have some regulation, but should be more open.

As a Rugby Coach I would like to see more children enter sports as it is good for their health and team building skills that ultimately benefit our society. Having affordable appropriate eyewear for sports helps achieve these ideas.

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

I do believe the supply should be regulated, but this could be a clinical decision based on a spectacle prescription. For instance a pair of swimming goggles that do not correct small astigmatisms is hardly a public health issue and a suitably qualified practitioner should be able to take a written RX and turn that into something to help a child in a sport.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See prev entries

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

Yes

If yes, please give your reasons and provide any evidence to support these.:

Prescription Spectacle Supply

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As prev - it is not currently working for patients or the profession.

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

MECS provision to Px during the pandemic

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Quicker access to experts and more local provision of care.

Many opinions of health are currently on the basis of scans or printouts from machines carried out by trained staff.

The interpretation of the results is the most important aspect here

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Correct training as seen in Diabetic Fundus Screening
As strong professional input that has the practitioner interpreting the results as responsible.

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

No

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

NA

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

You can not enforce it.
How many prosecutions have the GOC made?
How many have been made public?

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Registration of all optical business/sites.
GOC advising the public to look only for registered suppliers

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

53 Are there any other gaps in regulation where you think legislative change might be required?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

.co.uk is UK based, so subject to UK regulations

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

non registrants should be prevented from selling spectacles, performing eye examination or "sight tests" and selling contact lenses - prescription and cosmetic contact lenses.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

I feel that an optometrist - and that is the correct work not optician - should not be allowed to work for a corporation directly and only be able to be employed by an optometrist or ophthalmologist or hospital. That is the case in many USA states and protects the optometrist and the public. The state of optometry in this country has been turned into an assembly line and hard sell. The public is being examined by optometrist employed by corporations who are pressuring optometrists to tell patients they need new glasses or updated glasses. Corporations that do not even give their optometrist adequate breaks. Corporations that actively encourage optometrists to not do additional testing such as visual field testing so that the patient does not worry about eye health and buys glasses that day. I speak from experience of all these things happening to optometrists.

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

no

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

USA qualified and educated optometrists should be allowed to be accredited as an independent prescribing optometrist here in the UK. The education in the USA requires all optometrists to receive therapeutic qualifications to practice optometry. Instead, USA optometrist are having to do an IP course then hope they get a placement with hospital in order to meet requirements to take the IP exam.

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Yes

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Yes, the GPhC model of a responsible pharmacist

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

I do hope that no pressure from corporations like [redacted] is influencing bodies like the GOC to allow dispensing opticians to do refractions so that they can do even more eye exams in one day for

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

I do know that after practicing here for the last 10 years, patient referrals are too complicated time consuming and involve too many hoops to jump through before they get the care they need. Why optometrist are not allowed to refer directly to ophthalmology in my area is a mystery to me. Optometrists should be the primary eye care providers and ophthalmology should be treading more complicated cases and in theatre. The pathway to IP in the UK discourages many optometrists from pursuing it. We are working with our hand behind our backs, knowing what treatment is needed but unable to provide it. Instead we have to write to the GP who hopefully refers to ophthalmology. Then ophthalmology will write a report letter back to the GP and not the original referring optometrist.

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

Refraction is based on the health of the eyes. Conditions like cataracts and corneal disease and degeneration impact patient's refraction. You can not just do a refraction. Much like you can just have a "quick look" at the eyes. This is based on working as an optometrist since 2003 in both the USA and the UK. A refraction alone on a patient I saw yesterday would have missed a large rhegmatogenous retinal detachment and that patient would have eventually lost sight which may not have been able to be saved with surgical treatment.

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

No

Please explain which group(s), give your reasons and provide any evidence to support these.:

the sale and supply should be done only by qualified dispensing opticians and optometrists.

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

I am not sure how to answer this questions. Anyone can buy contact lenses online and do without any prescription and prescribing themselves. The online companies selling contact lenses to patients should at least contact the optometrist who signed the prescription to see if the prescription is accurate and valid. I can not tell you how many times I have seen patients wearing self prescribed [redacted] contacts lenses with advanced corneal neovascularisation.

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

see my above answer. Corneal neovascularisation is seen often in my patients who are buying contact lenses online without a valid prescription.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

no barrier. anyone can buy contacts online without a prescription and the company selling the lenses don't suffer any consequences for risking patient's eye and corneal health.

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

See the above. I the job of the General Optical Council is to protect the public, the restricting the sell of contacts to only those who are qualified and making sure the prescription is verified with each sale is needed.

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

A contact lens prescription should be only for a maximum of 1 year in order to make sure the patient's ocular health is not being affected from contact lens wear and to make sure the patient has the best vision possible with contact lens use.

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

again not sure how to answer this as many places both online and in store sell zero contact lenses without any optometrist or contact lens optician on staff. These places don't suffer any consequences for doing so.

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Obviously not teaching patient the correct insertion and removal could mean the patient could injure their eyes. Zero power contact lenses made of poor material risks the health and integrity of the cornea.

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

But also to follow through with penalising and prosecuting those unqualified selling contacts lenses without prescriptions to the general public.

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Having a patient return every year for a contact lens aftercare of course increases the profits for the optical practice. But more importantly, required annual appointments protects the public's ocular health and remind them of the importance of taking care of their vision.

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Again like contacts, people can buy glasses online without a valid prescription by taking their own pd and typing in their own prescription. Poorly fitted glasses and incorrect prescriptions may not directly impact the ocular health but could affect the patient's ability to see well to drive a car. Poor vision could cause mobility issues as well.

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

See above

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

see above

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

No

Please give your reasons and provide any evidence to support these.:

it is necessary. I would argue that patients should be seen every year for an eye exam.

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Leaving it too long between eye exams allows undetected issues like glaucoma to progress and risking they vision of the patients.

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Having eye exams required every 2 years or 1 year of course increased the profits of the optical practice. But also it keeps to detect eye health condition in patients allowing optometrists to better assist our patients in keeping their ocular health and vision the best possible.

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

again one can buy these types of things online without prescriptions

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

giving an under 16 the incorrect material in sports eyewear could mean that when shattered the lens could injure the eyes.

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

There should be a minimal requirement list needed for remote or virtual consultations for optometrists. Having an official list of tests needed would protect the patient and the practitioner.

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly positive impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

During lockdown 1, remote consultation allowed me to get 4 people to hospital with wet AMD that was not able to be diagnosed any other way due to restrictions.

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Again setting a minimal lists of tests and data to gather would protect the public and the practitioner in case of any legal dispute later.

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Maybe consider calling it the Optometry Act instead of Opticians Act in order to distinguish optometry as primary eye care providers and distinguish us from dispensing opticians who are opticians.

53 Are there any other gaps in regulation where you think legislative change might be required?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not Answered

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Optometrist

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Same as before: Children, complex Rxs, contact lenses, refraction....

7 What activities do you think must be restricted to our registrants?

Please provide details.:

Same rules as before

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

Sale of plano contact lenses as these carry exactly the same health risk as prescription ones

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Yes

Please give your reasons and provide any evidence to support these.:

Laser surgery is performed by USA Optometrists & I don't see why this can't be happening in the UK

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

There are no shortages of Optometrists and refraction along with the skills of ophthalmic diseases that Optometrists possess make them without exception the right candidates for performing these tasks and if you remove this then patients will be subjected to great risks

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

As mentioned above, but the advantages would be for larger companies to make more money

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

I was a dispensing Optician & contact lens Optician myself before I became an Optometrist and I can tell you that the knowledge that Optometrists have is no where near what you study in dispensing or contact lenses, so the legislation is accurate & does work in protecting the public so why change it!?

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As above

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

Yes

If yes, please provide details of the evidence and where it can be obtained.:

You can obtain this from secondary care, I'm sure they will be able to share this with the GOC

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

As mentioned previously

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

As mentioned previously

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Yes – please specify which groups of patients

Please explain which group(s), give your reasons and provide any evidence to support these.:

Mentioned previously

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Mentioned previously

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

The system works and does protect patients

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Yes

Please give your reasons and provide any evidence to support these.:

Mentioned previously

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

Patient safety

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patients safety

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

Performing specific tests that can help patients continue to wear their contact lenses safely

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

As B4

31 Would there be a risk of harm to patients if the requirements relating to the sale of zero powered contact lenses change?

Yes

Please give your reasons and provide any evidence to support these.:

Carries sane risk as prescription lenses

32 If you answered yes to the previous question, is legislation necessary to mitigate this risk?

Yes

Please give your reasons and provide any evidence to support these.:

As mentioned previously

33 What would be the advantages, disadvantages and impacts (both positive and negative) of zero powered contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Patient safety

Increase/ decrease in sales

6d. Sale and supply of optical appliances - offences under the Act

34 Are there any unnecessary regulatory barriers in the Act that would prevent current or future development in the sale of optical appliances or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Xx

35 If you answered yes to the previous question, what would be the risk on the consumer if these barriers were removed?

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

Xx

36 Is legislation regarding the sale of optical appliances necessary to protect consumers (except restricted categories)?

Yes

Please give your reasons and provide any evidence to support these.:

As mentioned previously

6e. Sale and supply of optical appliances - by non-registrants

37 Is the two year prescription restriction on purchase of spectacles from non-registrants an unnecessary regulatory barrier?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

Cx

38 What would be advantages, disadvantages and impacts (both positive and negative) of patients being able to purchase spectacles from non-registrants without a prescription dated in the previous two years? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Xx

39 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Mentioned previously

6f. Sale and supply of optical appliances - sportswear to under 16s

40 Does the legislation in relation to the sale and supply of sportswear optical appliances for children under 16 create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

As long as they are non Rx

41 What would be advantages, disadvantages and impacts (both positive and negative) of children under 16 being able to buy sportswear optical appliances outside the supervision of a registrant / registered medical practitioner? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Safety
Financial

42 What would be advantages, disadvantages and impacts (both positive and negative) of the legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Mentioned previously

6g. Sale and supply of optical appliances - other

43 Are there any other aspects of the sale and supply of optical appliances legislation that you think need changing or create unnecessary regulatory barriers?

No

If yes, please give your reasons and provide any evidence to support these.:

Xx

44 What would be the advantages, disadvantages and impacts (both positive and negative) of the sale and supply of optical appliances legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

Mentioned previously

7. Delivery of remote care and technology

45 Do you have any knowledge or experience of areas of technological development that the GOC should be aware of when considering changes to the Act?

Yes

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

We performed some telephone consultations during the pandemic

46 Is there any evidence that increased use of technology or remote care may have an impact on patient safety or care in the future?

Yes – a mainly negative impact

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Not seeing the Px face to face can easily lead to wrong diagnosis & advice

47 Are there any unnecessary regulatory barriers in the Act that would prevent any current or future technological development in the eye care sector or restrict innovative care delivery or competition in the market?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Xx

48 Are there any gaps within the Act or GOC policy relating to the regulation of technology or remote care that present a risk to patients?

Not sure / no opinion

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Xx

49 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of technology or remote care could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

Xx

50 Are there any gaps in the Act or GOC policy relating to the regulation of online sales of optical appliances that present a risk to patients?

Yes

If you answered yes, please give details of what these are, including your reasons and provide any evidence to support these. :

Xx

51 If you answered yes to the previous question, do you have any suggestions about how these gaps in the regulation of online sales of optical appliances could be addressed?

Please include your reasons and any evidence or impacts of your suggestions.:

8. Any other areas

52 Are there other areas of our current legislation that you think need to be amended (recognising that the Department of Health and Social Care review will cover our core functions)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Xx

53 Are there any other gaps in regulation where you think legislative change might be required?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Xx

54 Are there any other policies or guidance that the GOC currently produces that should be reviewed or require amendments?

No

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Xx

55 Are there any other impacts of our legislation that you would like to tell us about, including financial impact or impact on those with protected characteristics under the Equality Act 2010 (i.e. age, sex, race, religion or belief, disability, sexual orientation, gender reassignment, pregnancy or maternity, caring responsibilities)?

Not sure / no opinion

If you answered yes, please give details, including your reasons and provide any evidence to support these.:

Xx

Further information

56 Can we publish your response?

Yes, but please keep my name and my organisation's name private

[redacted]

[redacted]

[redacted]

3 Which category best describes you?

Contact lens optician

If 'other', please specify.:

4 Are you responding on behalf of an organisation?

No

Name of organisation:

1. Objectives for legislative reform

5 Are these the right objectives for the GOC for legislative reform?

Not sure / no opinion

If no, please provide details.:

2. Protection of title, restricted activities and registers

6 What activities should non-registrants be restricted/prevented from doing?

Please provide details.:

Dispensing to children and registered partially sighted and severe vision impaired ie as now.
Also possibly dispensing to "complex" patients.

7 What activities do you think must be restricted to our registrants?

Please provide details.:

sight testing
fitting/ dispensing of contact lenses

8 What are your views about continuing to restrict/prevent non-registrants from carrying out the following activities?

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Testing of sight:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Fitting of
contact lenses:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling optical
appliances to children under 16 and those registered visually impaired:
Should be restricted

You do not need to provide detailed reasoning or evidence at this stage as we will ask you for further information in the sections below. - Selling zero
powered contact lenses:
Should be restricted

9 Are there any additional activities that you think should be restricted to registrants?

Please provide details.:

nothing specific

10 Is there any evidence that any other post-registration skills, qualifications or training need to be accredited or approved by the GOC (above and beyond the existing contact lens optician and prescribing qualifications)?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

MECS schemes require local accreditation so perhaps that should be GOC recorded

3. Regulation of businesses

11 Does the basis for extension of business regulation outlined in our 2013 review of business regulation still apply?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

12 Are there any advantages, disadvantages and impacts (both positive and negative) of extending business regulation in addition to those identified in our 2013 review of business regulation? (Impacts can include financial and equality, diversity and inclusion.)

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

13 Do you think the GOC could more effectively regulate businesses if it had powers of inspection?

Unsure / no opinion

Please give your reasons and provide any evidence to support these.:

14 Is there an alternative model of business regulation that we should consider?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

4. Testing of sight

15 Should dispensing opticians be able to undertake refraction for the purposes of the sight test? (NB This would be possible only if the GOC were to amend or remove its 2013 statement on refraction.)

No

Please give your reasons and provide any evidence to support these.:

I cant see how this would be to the benefit of the patient.

The proposal would benefit the larger optical companies as it would allow the churning out of new spectacle prescriptions without taking into account any pathology present.

Why not just use an autorefractor?

16 What would be the advantages, disadvantages and impacts (both positive and negative) of amending or removing our 2013 statement on refraction so that dispensing opticians can refract for the purposes of the sight test? (Impacts can include financial impacts and equality, diversity and inclusion impacts.)

Please give your reasons and provide any evidence to support these.:

I cant see how this would be to the benefit of the patient.

The proposal would benefit the larger optical companies as it would allow the churning out of new spectacle prescriptions without taking into account any pathology present.

Why not just use an autorefractor?

17 Does the sight testing legislation create any unnecessary regulatory barriers (not including refraction by dispensing opticians)?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

18 What would be the advantages, disadvantages and impacts (both positive and negative) of sight testing legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The system has worked and allows sight testing and eye examinations to be conducted in the same visit. Local schemes for shared care allow further refinements as required.eg Glaucoma referral refinement and cataract schemes as just two examples

19 Do you have any data on the number/percentage of referrals that are made to secondary care following a sight test / eye examination?

No

If yes, please provide details of the evidence and where it can be obtained.:

20 Are you aware of any data to support or refute the case for separating the refraction from the eye health check?

No

If yes, please provide details of the evidence and where it can be obtained.:

5. Fitting of contact lenses

21 Does the fitting of contact lenses legislation create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these. Please also include any advantages, disadvantages and impacts (both positive and negative) of any proposed changes.:

22 What would be the advantages, disadvantages and impacts (both positive and negative) of fitting of contact lenses legislation remaining as it is currently? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

The current system is in place to protect the public.

6a. Sale and supply of optical appliances - supply to under 16s and those registered visually impaired

23 Should the sale and supply of optical appliances be further restricted to certain groups of vulnerable patients?

Not sure / no opinion

Please explain which group(s), give your reasons and provide any evidence to support these.:

Possibly LVA/ complex prescriptions?

24 If you answered yes to the previous question, what would be the advantages, disadvantages and impacts (both positive and negative) of further restricting the sale and supply of optical appliances to certain groups of vulnerable patients? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

6b. Sale and supply of optical appliances - prescription contact lenses and verification

25 Do the general direction / supervision legislative requirements relating to the sale of prescription contact lenses create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

26 Would there be a risk of harm to patients if the general direction / supervision requirements relating to the sale of prescription contact lenses changed?

Not sure / no opinion

Please give your reasons and provide any evidence to support these.:

paracetamol can be bought in a supermarket and it is possibly more likely to cause harm if taken incorrectly than an incorrect contact lens can cause.

27 Do the legislative requirements for verification of contact lens specifications create any unnecessary regulatory barriers?

No

Please give your reasons and provide any evidence to support these.:

28 What would be the advantages, disadvantages and impacts (both positive and negative) of removing the requirement to verify a copy of or the particulars of a contact lens specification? (Impacts can include financial and equality, diversity and inclusion.)

Please give your reasons and provide any evidence to support these.:

29 Do you think the Act should specify a definition of aftercare?

Yes

If yes, please specify what you think the definition of aftercare should be.:

A standard list of checks required to complete an aftercare visit

va, wearing time type of modality solutions used compliance check fit staining external eye examination eversion of lids ac check etc

6c. Sale and supply of optical appliances - zero powered contact lenses

30 Does the zero powered contact lenses legislation create any unnecessary regulatory barriers?

No
